

Rumination on illumination (computer graphics)

COS 116, Spring 2012

Adam Finkelstein

Applications

- Entertainment
- Computer-aided design
- Scientific visualization
- Training
- Education
- E-commerce
- Computer art

Inside a Thunderstorm
(Bob Wilhelmson, UIUC)

Boeing 777 Airplane

Overview

I. Images

II. Modeling

III. Rendering

IV. Animation

Image Processing
(Rusty Coleman, CS426, Fall99)

Rendering
(Michael Bostock, CS426, Fall99)

Modeling
(Dennis Zorin, CalTech)

Animation
*(Jon Beyer,
CS426, Spring04)*

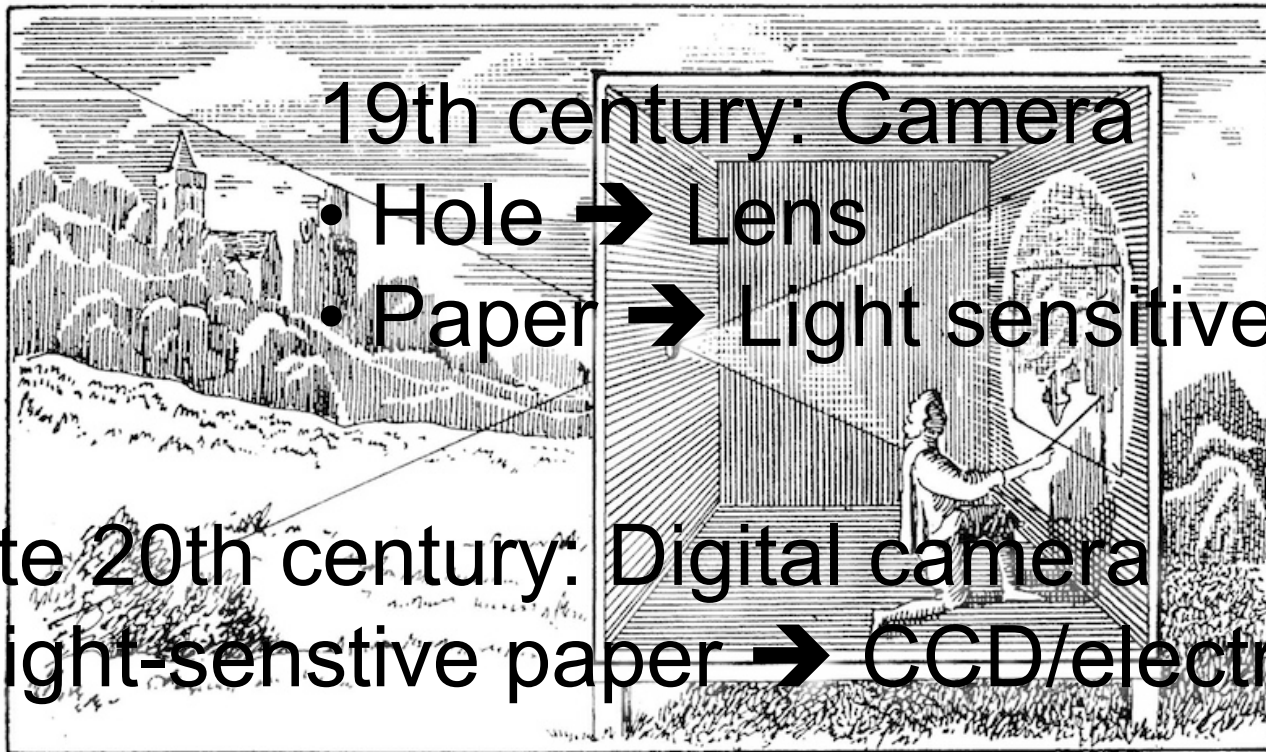

Part 1: Images

Q: What is an image?

Brief history of image capture

Camera obscura

- Known to Chinese 5thC. BC

Digital images

- Rectangular (2D) array of pixels

Continuous image

Digital image

Image Display

- Re-create continuous function from samples
 - Example: cathode ray tube (CRT)

Image is reconstructed
by displaying pixels
with finite area of color

LCD Screen

RGB Color Model

Colors are additive

Plate II.3 from FvDFH

| <u>R</u> | <u>G</u> | <u>B</u> | <u>Color</u> |
|----------|----------|----------|---|
| 0.0 | 0.0 | 0.0 | Black |
| 1.0 | 0.0 | 0.0 | Red |
| 0.0 | 1.0 | 0.0 | Green |
| 0.0 | 0.0 | 1.0 | Blue |
| 1.0 | 1.0 | 0.0 | Yellow |
| 1.0 | 0.0 | 1.0 | Magenta |
| 0.0 | 1.0 | 1.0 | Cyan |
| 1.0 | 1.0 | 1.0 | White |
| 0.5 | 0.0 | 0.0 | ?  |
| 1.0 | 0.5 | 0.5 | ?  |
| 1.0 | 0.5 | 0.0 | ?  |
| 0.5 | 0.3 | 0.1 | ?  |

What is an Image?

- Rectangular (2D) array of pixels

Continuous image

Digital image

What is an Image?

- Rectangular (2D) array of pixels

A pixel is a sample, not a little square!

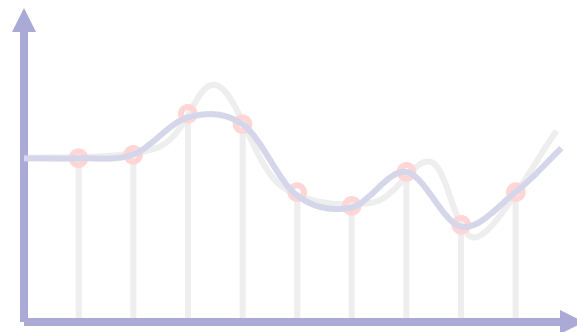

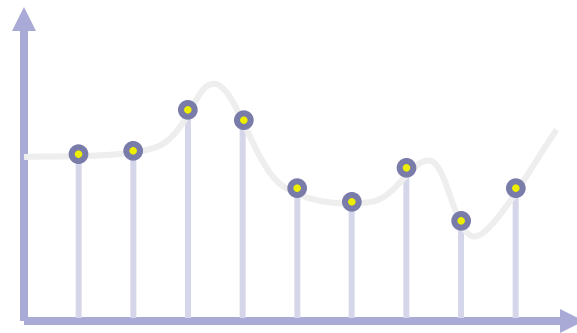

Continuous image

Digital image

Sampling and Reconstruction

Sampling
(e.g. digital camera)

Reconstruction
(e.g. CRT)

Adjusting Brightness

- Simply scale pixel components
 - Must clamp to range (e.g., 0 to 1)

Original

Brighter

Adjusting Contrast

- Compute average luminance L for all pixels
 - $L = 0.30*r + 0.59*g + 0.11*b$
- Scale deviation from L for each pixel
 - Must clamp to range (e.g., 0 to 1)

Original

More Contrast

Scaling the image

- Resample with fewer or more pixels (mathy theory...)

Original

1/4X
resolution

4X
resolution

Image Warping

- Move pixels of image (resampling)

Source image

→
Warp

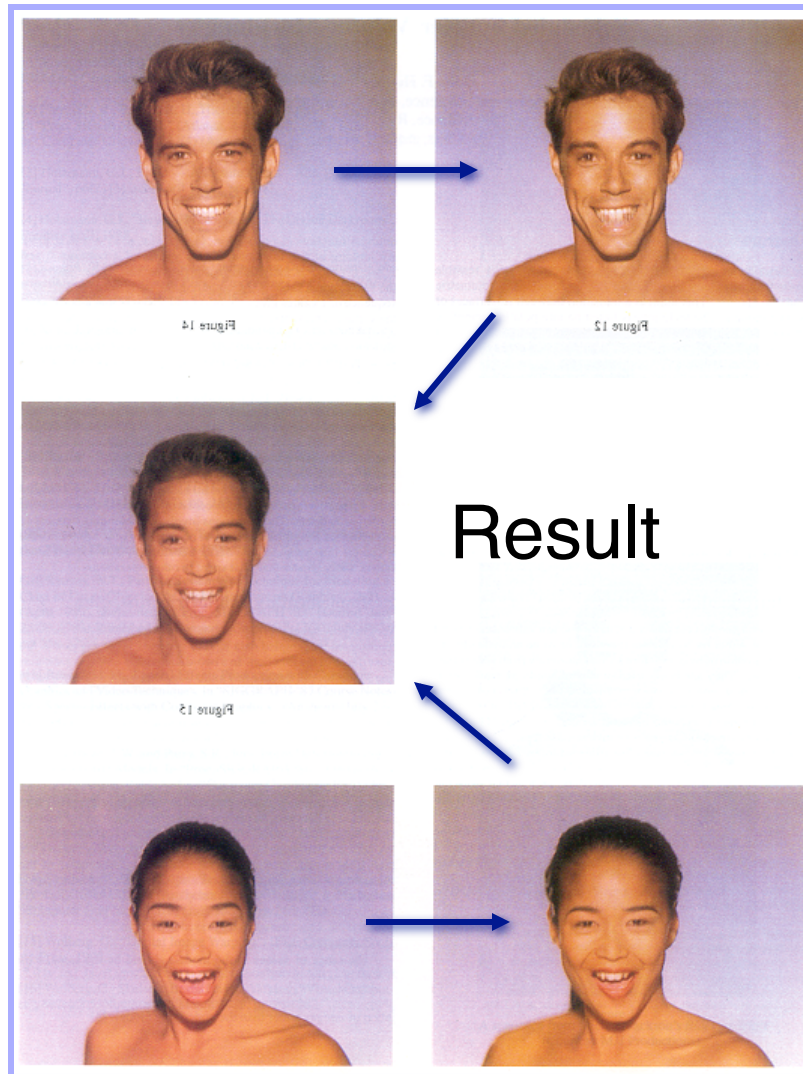

Destination image

Image Morphing

[Beier & Neeley]

Image₀

Warp₀

Image₁

Warp₁

Image Morphing

- Another example, T2, uses 3D graphics...

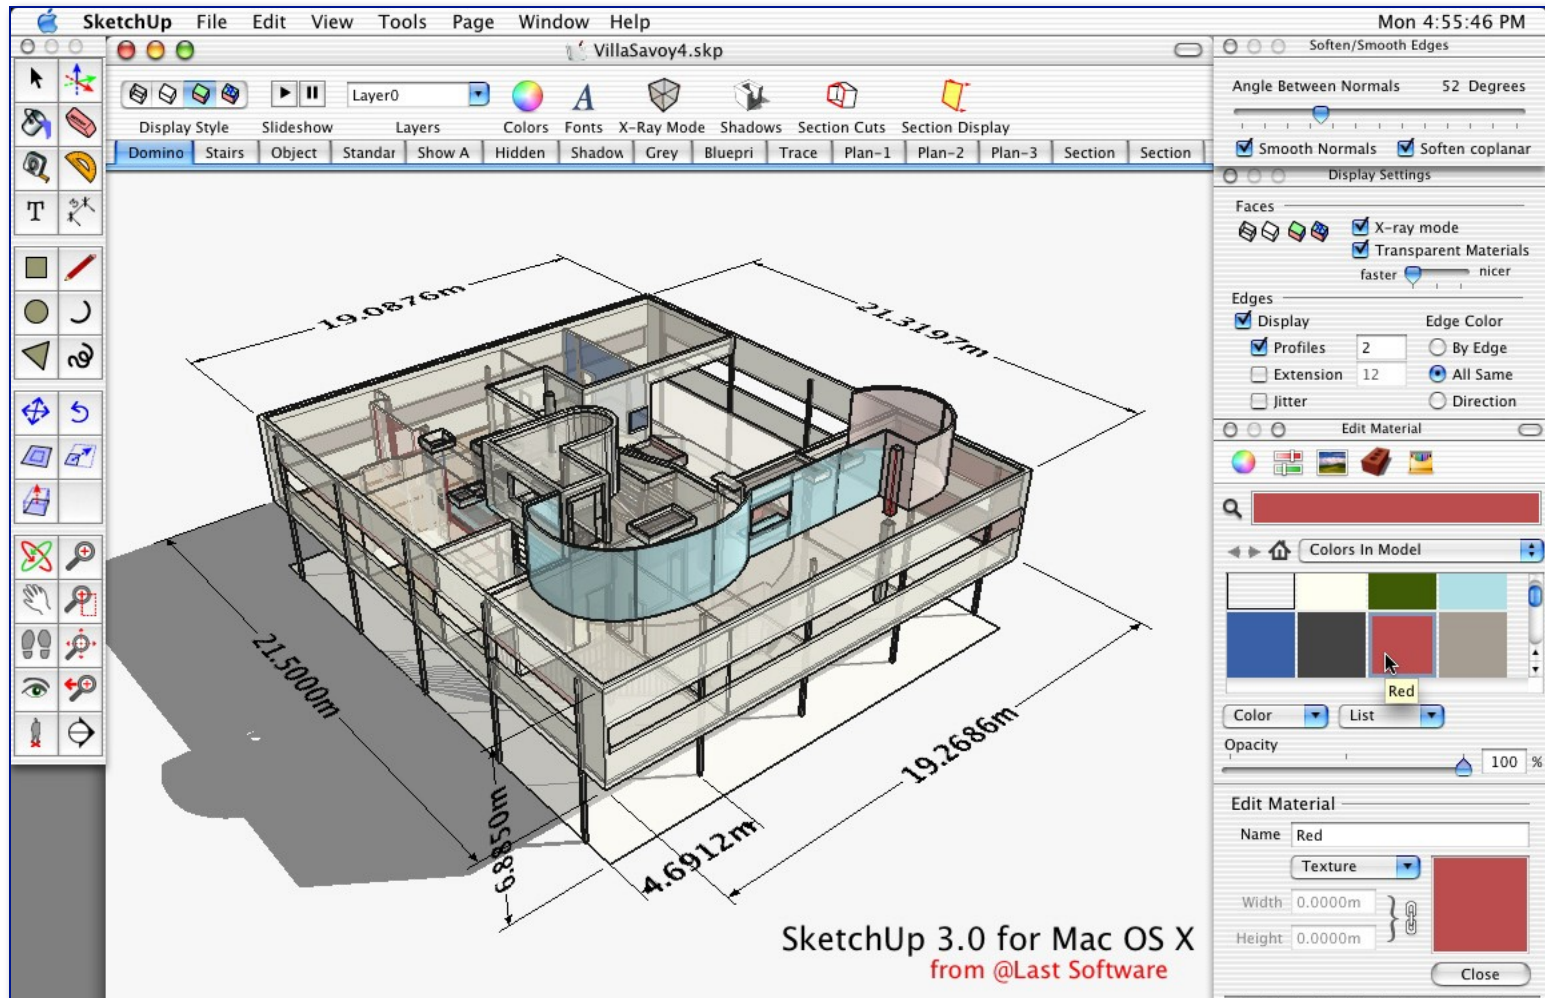

Part II: Modeling

- How to construct and represent shapes (in 3D)

Modeling in SketchUp (demo)

Model representation

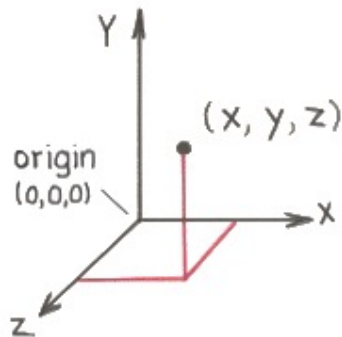

- Most common: list of triangles

- Three vertices in 3D

- (x_1, y_1, z_1)

- (x_2, y_2, z_2)

- (x_3, y_3, z_3)

Part III: Rendering

■ Direct illumination

- One bounce from light to eye
- Implemented in graphics cards
- OpenGL, DirectX, ...

■ Global illumination

- Many bounces
- Ray tracing

Direct Illumination
(Chi Zhang, CS 426, Fall99)

Ray Tracing
(Greg Larson)

Ray Casting

- A (slow) method for computing direct illumination
- For each sample:
 - Construct ray from eye through image plane
 - Find first surface intersected by ray
 - Compute color of sample based on surface properties

Lighting Simulation

- Lighting parameters
 - Light source emission
 - Surface reflectance

Simple Reflectance Model

- Simple analytic model:

- diffuse reflection +
- specular reflection +
- ambient lighting

Based on model
proposed by Phong

Diffuse Reflection

- Assume surface reflects equally in all directions
 - Examples: chalk, clay

Specular Reflection

- Reflection is strongest near mirror angle
 - Examples: mirrors, metals

Ambient Lighting

- Represents reflection of all indirect illumination

This is a total cheat (avoids complexity of global illumination)!

Combine colors of light & surface

Sum For Multiple Lights

Lighting Simulation

■ Direct illumination

- Ray casting
- Other methods

■ Global illumination

- Ray tracing
- Other methods

Path Types

L = light
D = diffuse bounce
S = specular bounce
E = eye

Path Types?

Ray Tracing

(note: texture)

HENRIK WANN JENSEN 1996

Ray Tracing

Ray Tracing

Terminator 2

Part IV: Animation

- Keyframe animation
 - Articulated figures
- Simulation
 - Particle systems

Animation

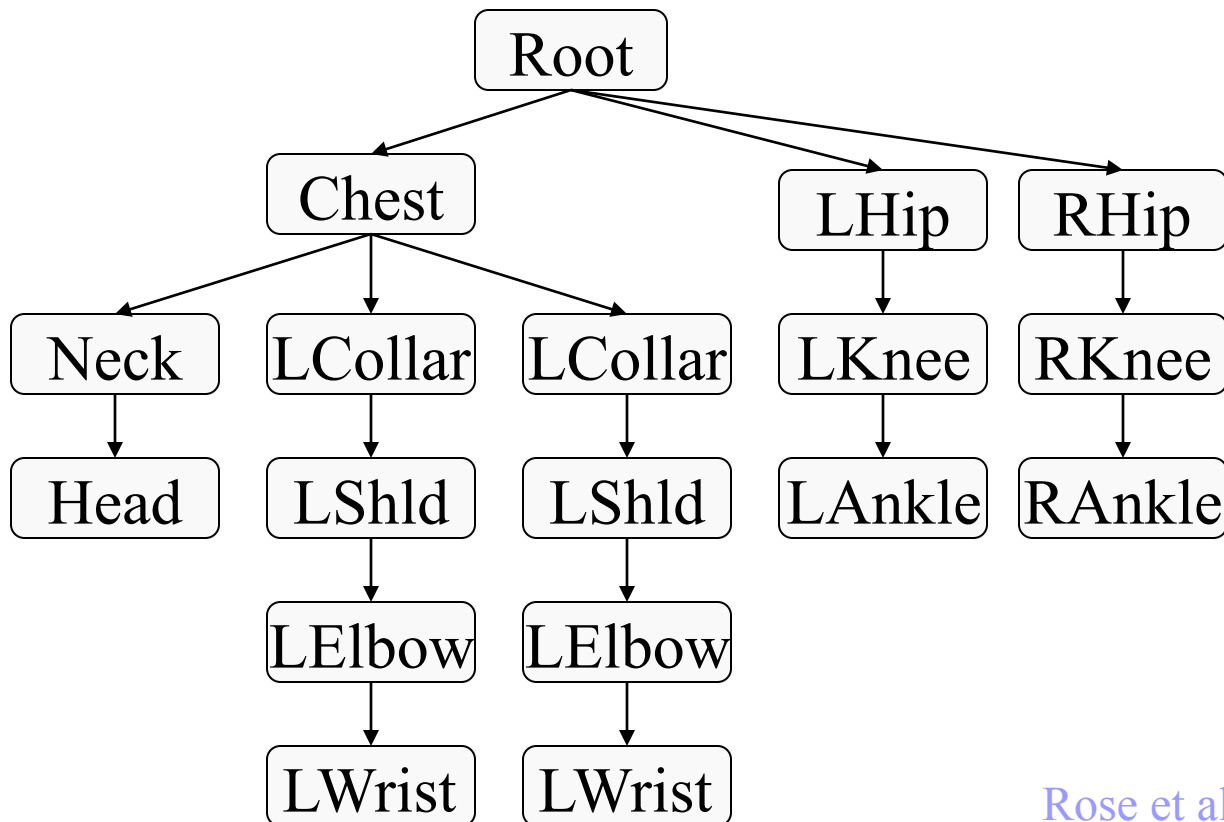

*(Jon Beyer,
CS426, Spring04)*

Simulation

Articulated Figures

- Well-suited for humanoid characters

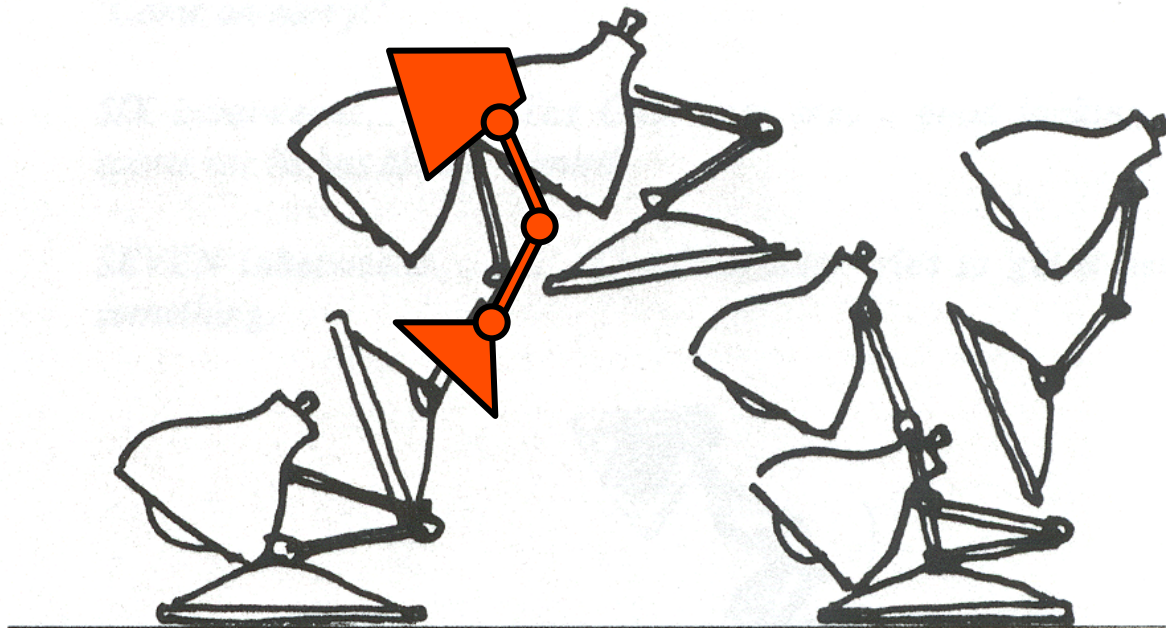

Rose et al. '96

Keyframe Animation: Luxo Jr.

Keyframe Animation

- Define character poses at specific times: “keyframes”
- “In between” poses found by interpolation

Keyframe Animation

- Inbetweening: may not be plausible

Keyframe Animation

- Solution: add more keyframes

Simulation

- Animator cannot specify motion for:
 - Smoke, water, cloth, hair, fire

Particle Systems

- Recall: “Game of Life”
- For each frame (time step):
 - Create new particles and assign attributes
 - Delete any expired particles
 - Update particles based on attributes and physics
Newton's Law: $f=ma$
 - Render particles

Particle Systems

- A particle is a point mass

- Mass
- Position
- Velocity
- Acceleration
- Color
- Lifetime

- Many particles to model complex phenomena

- Keep array of particles

Creating/Deleting Particles

- Where to create particles?
 - Around some center
 - Along some path
 - Surface of shape
 - Where particle density is low
- When to delete particles?
 - Areas of high density
 - Life span
 - Random

This is where person controls animation

Example: Wrath of Khan

Fig. 2. Distribution of particle systems on the planet's surface.

Example: Wrath of Khan

Example: Wrath of Khan

Fig. 7. Wall of fire about to engulf camera.
