

COS126 OOP Activity - 3.2, 3.4

- Here is the program `BouncingBall.java` from 1.5 (initial values modified).

```
1 /*****  
2 * Compilation:  javac BouncingBall.java  
3 * Execution:    java BouncingBall  
4 * Dependencies: StdDraw.java  
5 * Implementation of a 2-d bouncing ball in the box from (-1, -1) to (1, 1).  
6 *****/  
7 public class BouncingBall {  
8     public static void main(String[] args) {  
9  
10         // set the scale of the coordinate system  
11         StdDraw.setXscale(-1.0, 1.0);  
12         StdDraw.setYscale(-1.0, 1.0);  
13  
14         // initial values, random velocity and size  
15         double rx = 0.0, ry = 0.0;                      // position  
16         double vx = 0.015 - Math.random() * 0.03;        // x velocity  
17         double vy = 0.015 - Math.random() * 0.03;        // y velocity  
18         double radius = 0.025 + Math.random() * 0.05; // size  
19  
20         // main animation loop  
21         while (true) {  
22             // bounce off wall according to law of elastic collision  
23             if (Math.abs(rx + vx) > 1.0 - radius) vx = -vx;  
24             if (Math.abs(ry + vy) > 1.0 - radius) vy = -vy;  
25  
26             // update position  
27             rx = rx + vx;  
28             ry = ry + vy;  
29  
30             // clear the background  
31             StdDraw.setPenColor(StdDraw.GRAY);  
32             StdDraw.filledSquare(0, 0, 1.0);  
33  
34             // draw ball on the screen  
35             StdDraw.setPenColor(StdDraw.BLACK);  
36             StdDraw.filledCircle(rx, ry, radius);  
37  
38             // display and pause for 20 ms  
39             StdDraw.show(20);  
40         }  
41     }  
42 }
```

- Recommended Book Exercises: 3.2.5, 3.2.11 (Point.java code on Booksite)

- Here is the API for a Ball class based on BouncingBall.java.

```
public class Ball
-----
    Ball()      create a ball at (0,0), random velocity, random size
    void move()   move using velocity and unit time increment
    void draw()   draw ball at current position
```

Complete the constructor and methods for the Ball class below. The test main is already complete. (Note: There are extra blank lines.)

```
1 ****
2 * Compilation:  javac Ball.java
3 * Execution:    java Ball
4 * Dependencies: StdDraw.java
5 *
6 * Object oriented implementation of a 2-d Ball, Booksite 3.4
25 ****
26
27 public class Ball {
28
29     // declare instance variables
30     ----- // position
31     ----- // velocity
32     ----- // radius
33
34     // other instance variables? up to you
35
36     // constructor
37     public Ball() {
38         // Always start ball position at (0, 0)
39
40
41         // Initial velocity and size generated randomly
42
43
44
45
46
47     }
48
49
50     // draw the ball, but not the background
51     public void draw() {
52
53
54     }
55
```

```
57 // bounce off vertical wall by reflecting x-velocity
58 private void bounceOffVerticalWall() {
59 }
60 }
61
62 // bounce off horizontal wall by reflecting y-velocity
63 private void bounceOffHorizontalWall() {
64 }
65 }
66
67
68 // move the ball one step
69 public void move() {
70     // Bounce off border walls
71
72
73
74     // update position using unit change in time
75
76
77
78 }
79
80 // test client to create and animate just 2 balls
81 // this part is already complete.
82 public static void main(String[] args) {
83     // create and initialize two balls
84     Ball b1 = new Ball();
85     Ball b2 = new Ball();
86
87     // animate them
88     StdDraw.setXscale(-1.0, +1.0);
89     StdDraw.setYscale(-1.0, +1.0);
90     while (true) {
91         StdDraw.setPenColor(StdDraw.GRAY);
92         StdDraw.filledSquare(0.0, 0.0, 1.0);
93         StdDraw.setPenColor(StdDraw.BLACK);
94         b1.move();
95         b2.move();
96         b1.draw();
97         b2.draw();
98         StdDraw.show(20);
99     }
100 }
```

- Now complete the client program to draw N bouncing balls.

```

1 /*****
2 * Compilation:  javac BouncingBalls.java
3 * Execution:   java BouncingBalls N
4 * Dependencies: Ball.java StdDraw.java
5 * Booksite 3.4
6 * Client to create and animate an array of N bouncing balls
7 *****/
8
9 public class BouncingBalls {
10    public static void main(String[] args) {
11
12        // number of bouncing balls from command-line argument
13        int N = _____(args[0]);
14
15        // Set window coordinates between -1 and +1
16        StdDraw.setXscale(-1.0, 1.0);
17        StdDraw.setYscale(-1.0, 1.0);
18
19        // create an array of N random balls
20        Ball[] balls = _____
21        for (int i = 0; i < N; i++)
22            balls[i] = _____
23
24        // do the animation loop
25        while(true) {
26            // Gray Background
27            StdDraw.setPenColor(StdDraw.GRAY);
28            StdDraw.filledSquare(0.0, 0.0, 1.0);
29
30            // draw N black balls
31            StdDraw.setPenColor(StdDraw.BLACK);
32            for (int i = 0; i < ____; i++) {
33                _____
34                _____
35            }
36            StdDraw.show(20);
37        }
38    }
39 }
```
