

3.3 Designing Data Types

Procedural programming. [verb-oriented]

- Tell the computer to do this.
- Tell the computer to do that.

Alan Kay's philosophy. Software is a **simulation** of the real world.

- We know (approximately) how the real world works.
- Design software to model the real world.

Objected oriented programming (OOP). [noun-oriented]

- Programming paradigm based on data types.
- Identify **things** that are part of the problem domain or solution.
- Things in the world **know** things: instance variables.
- Things in the world **do** things: methods.

Alan Kay

Alan Kay. [Xerox PARC 1970s]

- Invented Smalltalk programming language.
- Conceived Dynabook portable computer.
- Ideas led to: laptop, modern GUI, OOP.

"The computer revolution hasn't started yet."

"The best way to predict the future is to invent it."

"If you don't fail at least 90 percent of the time, you're not aiming high enough."

Alan Kay
2003 Turing Award

Encapsulation

Bond. What's your escape route?

Saunders. Sorry old man. Section 26 paragraph 5, that information is on a need-to-know basis only. I'm sure you'll understand.

Abstract Data Types

Data type. Set of values and operations on those values.

Ex. int, String, Complex, Vector, Document, GuitarString, Tour, ...

Abstract data type. Data type whose internal representation is **hidden**.

Separate implementation from design specification.

- **Class** provides data representation and code for operations.
- **Client** uses data type as black box.
- **API** specifies contract between client and class.

Intuition

Client

API

- volume
- change channel
- adjust picture
- decode NTSC signal

Implementation

- cathode ray tube
- electron gun
- Sony Wega 36XBR250
- 241 pounds

client needs to know
how to use API

implementation needs to know
what API to implement

Implementation and client need to
agree on API ahead of time.

5

6

Intuition

Client

API

- volume
- change channel
- adjust picture
- decode NTSC signal

Implementation

- gas plasma monitor
- Pioneer PDP-502MX
- wall mountable
- 4 inches deep

client needs to know
how to use API

implementation needs to know
what API to implement

Can substitute better implementation
without changing the client.

7

Counter Data Type

Counter. Data type to count electronic votes.

```
public class Counter {
    public int count;

    public Counter() { count = 0; }
    public void hit() { count++; }
    public int get() { return count; }
}
```

Legal Java client.

```
Counter c = new Counter();
c.count = -16022;
```

Oops. Al Gore receives -16,022 votes in Volusia County, Florida.

8

Counter ADT

Counter. Abstract data type to count electronic votes.

```
public class Counter {
    private int count;

    public Counter() { count = 0; }
    public void hit() { count++; }
    public int get() { return count; }
}
```

Does not compile.

```
Counter c = new Counter();
c.count = -16022;
```

Benefit. Can guarantee invariant that each data type value remains in a consistent state.

9

Changing Internal Representation

Java ADTs.

- Keep data representation hidden with `private` access modifier.
- Expose API to clients using `public` access modifier.

```
public class Complex {
    private double re, im;

    public Complex(double re, double im) { ... }
    public double abs() { ... }
    public Complex plus(Complex b) { ... }
    public Complex times(Complex b) { ... }
    public String toString() { ... }
}
```

e.g., to polar coordinates

Advantage. Can switch internal representation without changing client.

Note. All our data types are already ADTs!

10

Time Bombs

Internal representation changes.

- [Y2K] Two digit years: January 1, 2000.
- [Y2038] 32-bit seconds since 1970: January 19, 2038.
- [VIN numbers] We'll run out by 2010.

www.cartoonstock.com/directory/m/millennium_time-bomb.asp

Lesson. By exposing data representation to client, need to sift through millions of lines of code in client to update.

11

Ask, Don't Touch

Abstract data types.

- Don't **touch** data and do whatever you want.
- Instead, **ask** object to manipulate its data.

"Ask, don't touch."

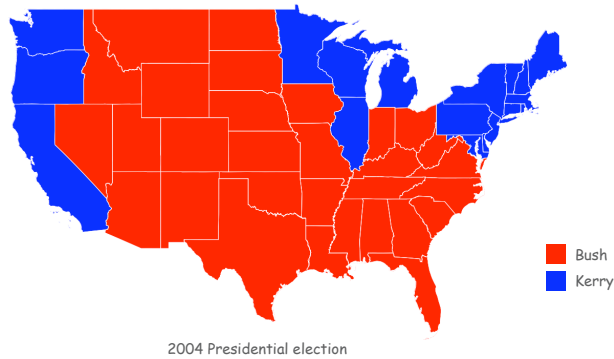

Adele Goldberg
Former president of ACM
Co-developed Smalltalk

Lesson. Limiting scope makes programs easier to maintain and understand.

"principle of least privilege"

12

Red States, Blue States

13

Modular programming. Model problem by decomposing into components.

Polygon. Geometric primitive.

Region. Name, postal abbreviation, polygonal boundary.

Vote tally. Number of votes for each candidate.

Election map. Regions and corresponding vote tallies for a given election.

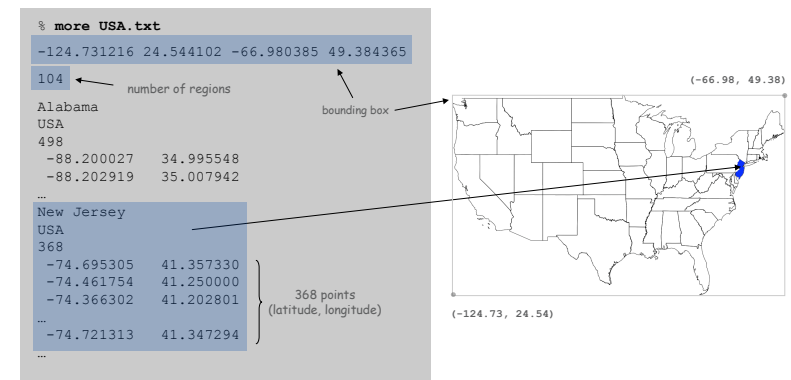

14

Geographic Boundaries

Boundary Data: States within the Continental US

USA data file. State names and boundary points.

Data source: US census bureau, www.census.gov/tiger/boundary.

15

16

Boundary Data: Counties within a State

State data files. County names and boundary points.

Data source: US census bureau, www.census.gov/tiger/boundary.

17

Polygon Data Type

Polygon. Closed, planar path with straight line segments.

Simple polygon. No crossing lines.

18

Polygon Data Type: Java Implementation

```

public class Polygon {
    private int N; // number of boundary points
    private double[] x, y; // the points (x[i], y[i])

    // read from input stream
    public Polygon(In in) {
        N = in.readInt();
        x = new double[N];
        y = new double[N];
        for (int i = 0; i < N; i++) {
            x[i] = in.readDouble();
            y[i] = in.readDouble();
        }
    }

    public void fill() { StdDraw.filledPolygon(x, y); }

    public double perimeter() { ... }
    public boolean contains(double x0, double y0) { ... }
    public String toString() { ... }
}
    
```

19

Polygon: Pieces and Holes

Pieces. A state can be comprised of several disjoint polygons.

Holes. A county can be entirely inside another county.

20

Region Data Type

Region. Represents a state or county.

Mercer, NJ
88 point polygon

New Jersey, USA
368 point polygon

21

Region Data Type: Java Implementation

```
public class Region {
    private String name; // name of region
    private String usps; // postal abbreviation
    private Polygon poly; // polygonal boundary

    public Region(String name, String usps, Polygon poly) {
        this.name = name;
        this.usps = usps;
        this.poly = poly;
    }

    public void draw() { poly.fill(); }

    public boolean contains(double x0, double y0) {
        return poly.contains(x0, y0);
    }

    public String toString() { ... }
}
```

22

Election Returns

Election Returns: By State

Election returns. Number of votes for Bush, Kerry, Nader by region.

Data source: David Leip, www.uselectionatlas.org.

```

25

Vote Tally Data Type

VoteTally. Represents the election returns for one region.

26

Vote Tally Data Type: Java Implementation

```
public class VoteTally {
    private int rep, dem, ind;

    public VoteTally(String name, String usps, int year) {
        In in = new In(usps + year + ".txt");
        String input = in.readAll();
        int i0 = input.indexOf(name);
        int i1 = input.indexOf(",", i0+1);
        int i2 = input.indexOf(",", i1+1);
        int i3 = input.indexOf(",", i2+1);
        int i4 = input.indexOf(",", i3+1);
        rep = Integer.parseInt(input.substring(i1+1, i2));
        dem = Integer.parseInt(input.substring(i2+1, i3));
        ind = Integer.parseInt(input.substring(i3+1, i4));
    }

    public Color getColor() {
        if (rep > dem) return StdDraw.RED;
        if (dem > rep) return StdDraw.BLUE;
        return StdDraw.BLACK;
    }
}
```

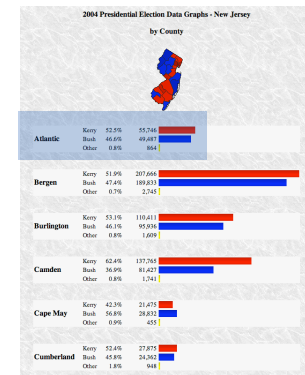

```

28

Election Scrapper (sketch)

```
int year = 2004; // election year
String usps = "NJ"; // United States postal code for New Jersey
int fips = 34; // FIPS code for New Jersey

String url = "http://uselectionatlas.org/RESULTS/datagraph.php";
In in = new In(url + "?year=" + year + "&fips=" + fips);
Out file = new Out(usps + year + ".txt");
String input = in.readAll();

while (true) {

    // screen scrape county name
    int p = input.indexOf("width:100px", p);
    if (p == -1) break;
    int from = input.indexOf("<b>", p);
    int to = input.indexOf("</b>", from);
    String county = input.substring(from + 3, to);

    // screen scrape vote totals for each candidate

    // save results to file
    file.println(county + "," + bush + "," + kerry + "," + nader + ",");
}

```

extract text between
and tags, that occurs
after width:100px

29

Election Map

Election Map Data Type

ElectionMap. Represents the election map for a given election.

```
public static void main(String[] args) {
    String name = args[0];
    int year = Integer.parseInt(args[1]);
    ElectionMap election = new ElectionMap(name, year);
    election.show();
}

```

% java ElectionMap NJ 2004

% java ElectionMap USA 1968

31

Election Map Data Type: Java Implementation

```
public class ElectionMap {
    private int N;
    private Region[] regions;
    private VoteTally[] votes;

    public ElectionMap(String name, int year) {
        In in = new In(name + ".txt");

        // read in bounding box and rescale coordinates
        N = in.readInt();
        regions = new Region[N];
        votes = new VoteTally[N];
        for (int i = 0; i < N; i++) {
            String name = in.readLine();
            String usps = in.readLine();
            Polygon poly = new Polygon(in);
            regions[i] = new Region(name, usps, poly);
            votes[i] = new VoteTally(name, usps, year);
        }
    }

    public void show() {
        for (int i = 0; i < N; i++) {
            StdDraw.setPenColor(votes[i].getColor());
            regions[i].draw();
        }
    }
}

```

32

Modular Programming

Relationships among data types.

33

Data Visualization

34

Visual Display of Quantitative Information

Red states, blue states. Creates a misleading and polarizing picture.

Edward Tufte. Create charts with high data density that tell the truth.

35

Purple America

Idea. [Robert J. Vanderbei] Assign color based on number of votes.

<http://www.princeton.edu/~rvdb/JAVA/election2004>

- a_1 = Bush votes.
- a_2 = Nader votes.
- a_3 = Kerry votes.

$$(R, G, B) = \left(\frac{a_1}{a_1 + a_2 + a_3}, \frac{a_2}{a_1 + a_2 + a_3}, \frac{a_3}{a_1 + a_2 + a_3} \right)$$

```

public Color getColor() {
    int tot = dem + rep + ind;
    return new Color((float) rep/tot, (float) ind/tot, (float) dem/tot);
}
VoteTally.java
    
```

36

Purple New Jersey

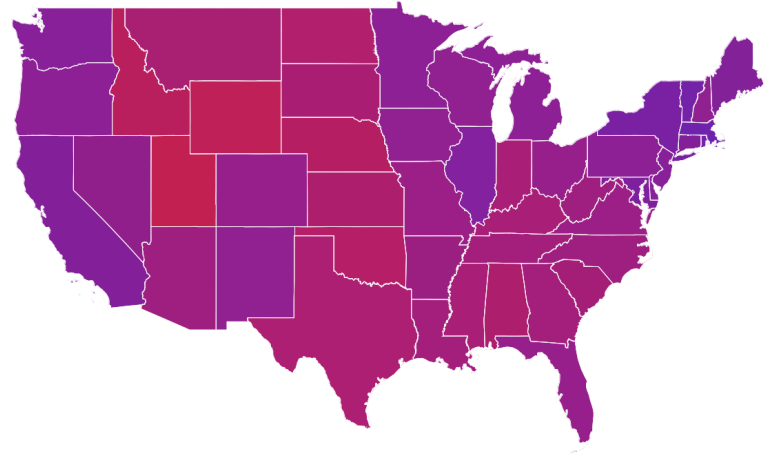

```
% java ElectionMap NJ 2004
```

37

Purple America

```
% java ElectionMap USA 2004
```

38

Purple America

```
% java ElectionMap USA-county 2004
```

39

Data Visualization: Design Issues

Remark. Humans perceive red more strongly than blue.

Remark. Amount of color should be proportional to number of votes, not geographic boundary.

Remark. Project latitude + longitude coordinates to 2d plane.

Mercator projection

Albers projection

40

3D Visualization

3D visualization. Volume proportional to votes; azimuthal projection.

Robert J. Vanderbei
www.princeton.edu/~rvdb/JAVA/election2004

41

Cartograms

Cartogram. Area of state proportional to number of electoral votes.

Michael Gastner, Cosma Shalizi, and Mark Newman
www-personal.umich.edu/~mejn/election

42

Summary

Modular programming.

- Break a large program into smaller independent modules.
- Ex: Polygon, Region, VoteTally, ElectionMap, In, Out.

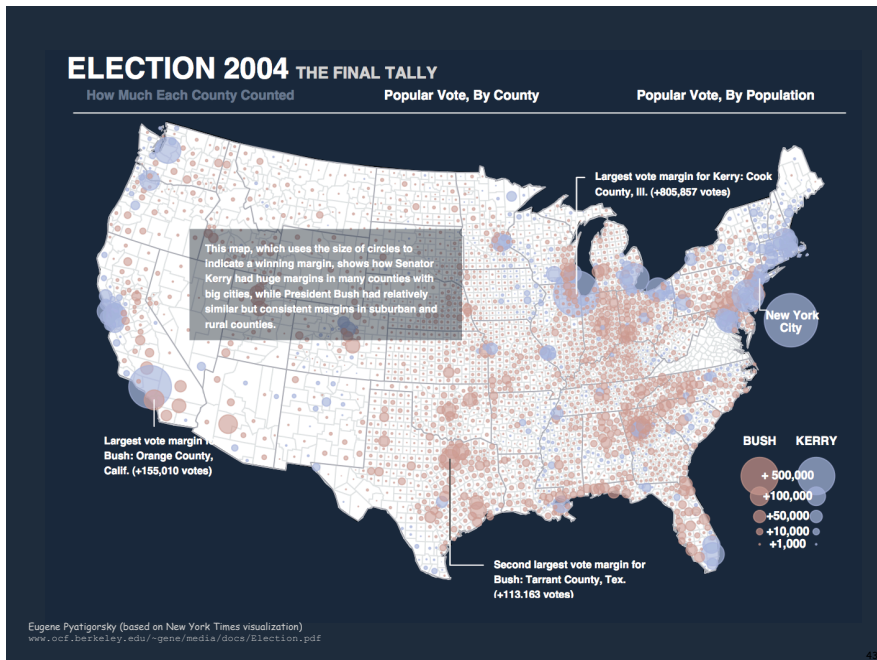

Ex 1. Build large software project.

- Software architect specifies API.
- Each programmer implements one module.
- Debug and test each piece independently. [unit testing]

Ex 2. Build reusable libraries.

- Language designer extends language with ADTs.
- Programmers share extensive libraries.
- Ex: In, Out, Draw, Polygon, ...

44

43
