Conway's Game of Life

John Conway

hacker's emblem

Conway's game of life.
- Critters live and die in an infinite square grid.
- Time proceeds in discrete steps.

**Survival.** Critter lives and dies depending on 8 neighbors:
- Too few?   (0-1) die of loneliness
- just right? (2-3) survive to next generation
- too many? (4-8) die of overcrowding

Birth. Critter born if exactly 3 neighbors.

death   *birth*

time t   *time t+1*

Glider. Propagates a signal.

|				
time t	*time t+1*	*time t+2*	*time t+3*	*time t+5*

Gosper glider gun. Generates gliders.

What Could This Be?

Weak AI

Can a machine appear intelligent?

Goal. [Turing 1950] Program computer to exhibit intelligent behavior.

> " Every aspect of learning or any other feature of intelligence can in principle be so precisely described that a machine can be made to simulate it. " — J. McCarthy *51
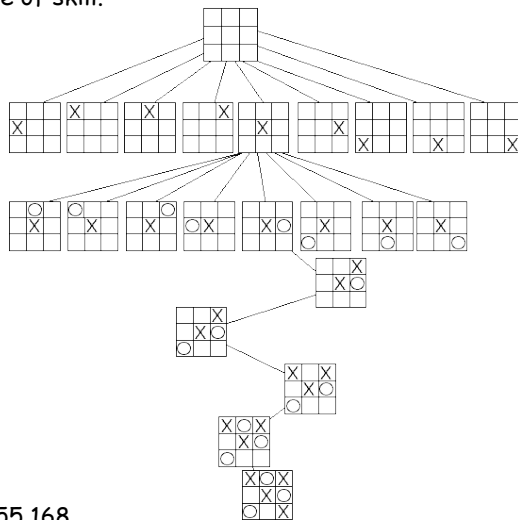

1960s. Very optimistic predictions.

Reality. Slow progress with some striking successes.
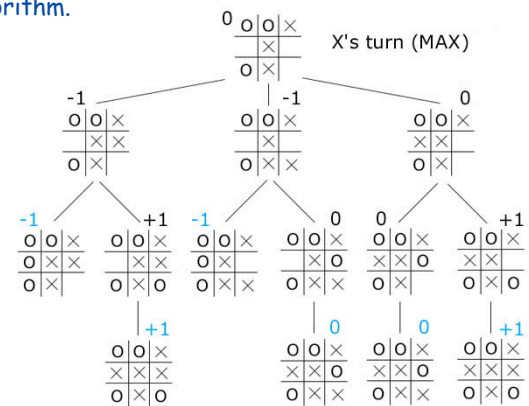

Tic-Tac-Toe

Tic tac toe. Two person game of skill.

Number of possible games 255,168.

Tic-Tac-Toe

Minimax algorithm.

X's turn (MAX)

Tic-tac-toe is solved. X will never lose; O will never lose.

assuming optimal play by X

Challenge. [Claude Shannon] Develop a computer program to play chess.
Number of possible games. $\approx 10^{23}$.
N-by-N version. EXPTIME-complete.

Deep Blue. [IBM]
- Supercomputer, augmented by VLSI chess chips.
- 200 million board positions per second.

Machine beats man. [February 1996] First computer program to win a chess game against reigning world champion.

" Once again, man beats machine! "

Number of possible games. $\approx 10^{31}$.
N-by-N version. EXPTIME-complete.

Checkers (Draughts)

Chinook. [Jon Schaeffer] Computer program for checkers.

Man vs. machine. Chinook awarded world championship in 1994 after 6 draws with Marion Tinsley (who withdrew).

Checkers is solved! [Science, September 2007]
- Proof that black will never lose with optimal play.
- Proof that white will never lose with optimal play.

Backgammon

Backgammon. Two-player game of skill and luck.
TD gammon. [Gerry Tesauro 1980s]
- Program was given no expert backgammon knowledge.
- Learned strategy by playing itself 300,000 times.
- Among best backgammon players in the world.

Poker

Poker. Multi-player game of skill and luck.

Poker bots. Not currently competitive with pros.

Turing Test

Can a machine appear intelligent?
If so, how could we tell?

Turing Test

Judge types questions to both.
- Computer claims to be human.
- So does human.

Pass. If judge cannot tell which entity is human,
we say computer has passed the test and is "intelligent."

Prediction. [Turing] Computer would pass test by 2000.

Eliza

Eliza. [Weizenbaum 1966]
- Program imitates Rogerian psychiatrist.
- Works by generating scripted responses to keywords.
- Just 200 lines of code!

Q. Does Eliza appear intelligent?
A. You be the judge: `http://chayden.net/eliza/Eliza.html`

Eliza Pattern Matching Rules

```
…

key: perhaps
  decomp: *
    reasmb: You don't seem quite certain.
    reasmb: Why the uncertain tone ?
    reasmb: Can't you be more positive ?
    reasmb: You aren't sure ?
    reasmb: Don't you know ?

key: francais
  decomp: *
    reasmb: goto xforeign
    reasmb: I told you before, I don't understand French.

key: sorry
  decomp: *
    reasmb: Please don't apologise.
    reasmb: Apologies are not necessary.
    reasmb: I've told you that apologies are not required.

key: apologise
  decomp: *
    reasmb: goto sorry

…
```

Parry

Parry. [Colby 1972] Program imitates a paranoid schizophrenic.

Q. What happens when Parry "meets" Eliza?
A. You be the judge: `http://tools.ietf.org/html/rfc439`

Loebner Prize

- $100,000 to first program to pass restricted Turing Test.
- Annual competition held since 1995.
- Small awards given to best programs.

"Hello, Judge. My name is Ella. Please tell me your first name, or whatever I should call you."

"Call me Lisa. Am I male or female?"

" Okay, I will call you 'Lisa. Am I Male Or Female?' I am here recently from Tainjin, China, so please be patient with me."

" I'm not a patient because I am not ill. Are you feeling well today?

" What do you think it means that you are not ill?"

" Have you ever been ill?"

" 'Have you ever been ill?' you say? That's it, Lisa Am I Male Or Female! I will schedule a whipping for you.""

"What do you think of Reading?"

"I'm somewhat crazy about reading. I like to read mystery novels."

"I meant the town."

"Jones lives in the city and is a writer of children's books."

"Does Jones live in Reading, then?"

"Tomorrow is another day. We can only live today well."

"Do you live, then?"

"I live then a lot. Someday we will live on another planet."

"I think you are already there."

"What is it?"

"What is what?"

"A high-yield, perennial, four-lobed hybrid of wheat and rye whose root grain, triticale, can trace its ancestry to twentieth-century Canada."

"At last. Another classic grain freak."

"Lewis. Jim Lewis. Would you like for me to show you some poetry?"

"No, thanks."

"I didn't want to show you the stupid poetry anyway."

Twenty questions.   `http://www.20q.net`

Question answering system. `http://start.csail.mit.edu`

Strong AI

Can a machine be intelligent?

Chinese Room Experiment (Searle 1980)

Imagine that:

- You don't understand Chinese.
- You're alone in a room that has paper slots labeled "input" and "output".
- You have a big book of Chinese writing.
- You have English instructions (*no translations*) that tell you what to write on your output paper in response to various inputs.

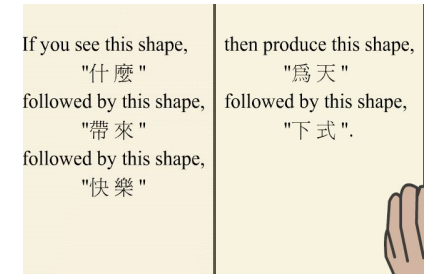

Chinese Room Experiment (Searle 1980)

And then:

- Chinese speakers outside the room pass in pieces of paper with Chinese writing. They know these are questions (but you don't).
- You consult your manual of instructions, figure out the proper Chinese response, copy it down, and pass it out.

`http://www.mind.ilstu.edu/curriculum/searle_chinese_room/searle_chinese_room.php`

Q. The folks outside think you understand Chinese. Do you?
Q. If a computer did the same, would it understand Chinese?

Weak AI. Can machines be programmed to exhibit intelligent behavior?
A. Surely true: Deep Blue, Chinook, TD-Gammon, others.

Strong AI. Can machines can be programmed to possess intelligence?

Searle. Chinese Room is absolute refutation of strong AI.
But… many disagree!

> " The question of whether a computer can think is no more interesting
> than the question of whether a submarine can swim. " – Edsger Dijkstra

Is (Strong) AI Ultimately Possible?

> " Just as the Wright brothers at Kitty Hawk in 1903 were on the right
> track to the 747, so too is AI, with its attempts to formalize
> commonsense understanding, on its way to fully intelligent machines. "
> – Patrick Winston
>
> " Believing that writing these types of programs will bring us closer to
> real artificial intelligence is like believing that someone climbing a tree
> is making progress toward reaching the moon. "   – Hubert Dreyfus
>
> " The brain happens to be a meat machine. "   – Marvin Minsky, *54
>
> " Either artificial intelligence is possible...or we're not. " – Herb Simon

Reverse Turing Test

Standard Turing test. Judge is human.

Reverse Turing test. Judge is computer!
Why?
- Google allows each user 7GB storage.
- PayPal once offered $5 for each user who opens a new account.
- Both need to distinguish real humans from bots.

OCR. Given degraded text, find original text.

CAPTCHA. [completely automated public Turing test to tell computers and humans apart]

http://online.wsj.com/public/resources/images/OB-AB313_captch_20060524170113.gif

DARPA Grand Challenge

DARPA Grand Challenge

2004 Grand Challenge. Navigate an autonomous vehicle through 142 mile course in Mohave Desert at military speed.

Results. No team finished; CMU team finished 7.36 miles.

Prospect Eleven   *Princeton team*

2005 Grand Challenge. Navigate an autonomous vehicle through 132 mile course in Mohave Desert at military speed.

Results. Stanford team won in under 7 hours; $2 million prize.

Stanley

2007 Urban Challenge. Navigate an autonomous vehicle through 60 mile course in mock urban environment, obeying traffic laws and avoiding other vehicles.
