

## 2.1 Functions

Introduction to Programming in Java: An Interdisciplinary Approach · Robert Sedgewick and Kevin Wayne · Copyright © 2002–2010 · 2/17/11 9:58 PM

### A Foundation for Programming

## 2.1 Functions

### Functions (Static Methods)

#### Java function.

- Takes zero or more input arguments.
- Returns one output value.
- Side effects (e.g., output to standard draw). ← more general than mathematical functions

#### Applications.

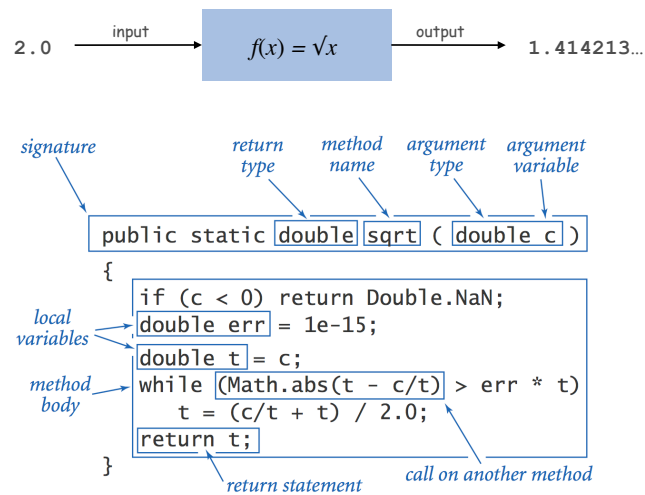

- Scientists use mathematical functions to calculate formulas.
- Programmers use functions to build modular programs.
- **You** use functions for both.

#### Examples.

- Built-in functions: `Math.random()`, `Math.abs()`, `Integer.parseInt()`.
- Our I/O libraries: `StdIn.readInt()`, `StdDraw.line()`, `StdAudio.play()`.
- User-defined functions: `main()`.

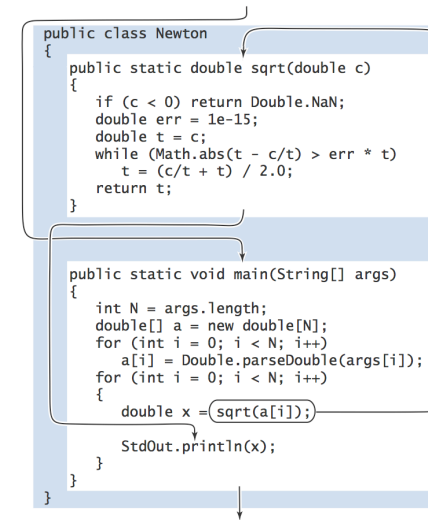

## Anatomy of a Java Function

Java functions. Easy to write your own.

## Flow of Control

Key point. Functions provide a **new way** to control the flow of execution.

5

6

## Flow of Control

Key point. Functions provide a **new way** to control the flow of execution.

What happens when a function is called:

- Control transfers to the function code.
- Argument variables are assigned the values given in the call.
- Function code is executed.
- Return value is assigned in place of the function name in calling code.
- Control transfers back to the calling code.

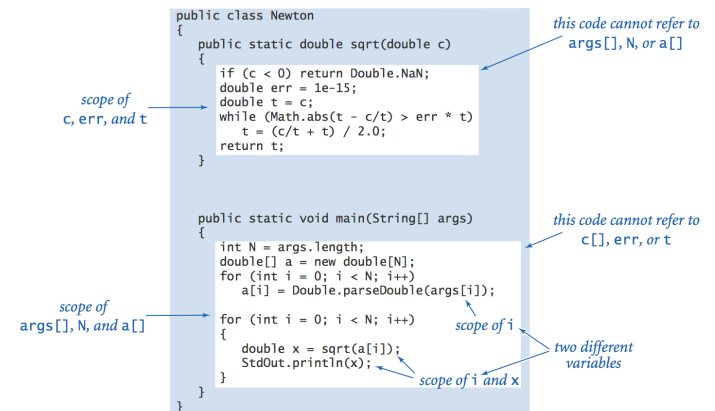

Note. This is known as "pass by value."

## Scope

Scope (of a name). The code that can refer to that name.

Ex. A variable's scope is code following the declaration in the block.

Best practice: declare variables to limit their scope.

7

8

### Function Challenge 1a

Q. What happens when you compile and run the following code?

```
public class Cubes1 {
    public static int cube(int i) {
        int j = i * i * i;
        return j;
    }

    public static void main(String[] args) {
        int N = Integer.parseInt(args[0]);
        for (int i = 1; i <= N; i++)
            StdOut.println(i + " " + cube(i));
    }
}
```

```
% javac Cubes1.java
% java Cubes1 6
1 1
2 8
3 27
4 64
5 125
6 216
```

9

### Function Challenge 1b

Q. What happens when you compile and run the following code?

```
public class Cubes2 {
    public static int cube(int i) {
        int i = i * i * i;
        return i;
    }

    public static void main(String[] args) {
        int N = Integer.parseInt(args[0]);
        for (int i = 1; i <= N; i++)
            StdOut.println(i + " " + cube(i));
    }
}
```

10

### Function Challenge 1c

Q. What happens when you compile and run the following code?

```
public class Cubes3 {
    public static int cube(int i) {
        i = i * i * i;
    }

    public static void main(String[] args) {
        int N = Integer.parseInt(args[0]);
        for (int i = 1; i <= N; i++)
            StdOut.println(i + " " + cube(i));
    }
}
```

11

### Function Challenge 1d

Q. What happens when you compile and run the following code?

```
public class Cubes4 {
    public static int cube(int i) {
        i = i * i * i;
        return i;
    }

    public static void main(String[] args) {
        int N = Integer.parseInt(args[0]);
        for (int i = 1; i <= N; i++)
            StdOut.println(i + " " + cube(i));
    }
}
```

12

## Function Challenge 1e

Q. What happens when you compile and run the following code?

```
public class Cubes5 {
    public static int cube(int i) {
        return i * i * i;
    }

    public static void main(String[] args) {
        int N = Integer.parseInt(args[0]);
        for (int i = 1; i <= N; i++)
            StdOut.println(i + " " + cube(i));
    }
}
```

## Gaussian Distribution

13

## Gaussian Distribution

Standard Gaussian distribution.

- "Bell curve."
- Basis of most statistical analysis in social and physical sciences.

Ex. 2000 SAT scores follow a Gaussian distribution with mean  $\mu = 1019$ , stddev  $\sigma = 209$ .

$$\phi(x) = \frac{1}{\sqrt{2\pi}} e^{-x^2/2}$$

$$\begin{aligned} \phi(x, \mu, \sigma) &= \frac{1}{\sigma\sqrt{2\pi}} e^{-(x-\mu)^2/2\sigma^2} \\ &= \phi\left(\frac{x-\mu}{\sigma}\right) / \sigma \end{aligned}$$

## Java Function for $\phi(x)$

Mathematical functions. Use built-in functions when possible; build your own when not available.

```
public class Gaussian {
    public static double phi(double x) {
        return Math.exp(-x*x / 2) / Math.sqrt(2 * Math.PI);
    }

    public static double phi(double x, double mu, double sigma) {
        return phi((x - mu) / sigma) / sigma;
    }
}
```

$$\phi(x) = \frac{1}{\sqrt{2\pi}} e^{-x^2/2}$$

$$\phi(x, \mu, \sigma) = \phi\left(\frac{x-\mu}{\sigma}\right) / \sigma$$

Overloading. Functions with different signatures are different.  
Multiple arguments. Functions can take any number of arguments.  
Calling other functions. Functions can call other functions.

library or user-defined

15

16

## Gaussian Cumulative Distribution Function

**Goal.** Compute Gaussian cdf  $\Phi(z)$ .

**Challenge.** No "closed form" expression and not in Java library.

$$\begin{aligned} \Phi(z) &= \int_{-\infty}^z \phi(x) dx && \text{Taylor series} \\ &= \frac{1}{2} + \phi(z) \left( z + \frac{z^3}{3} + \frac{z^5}{3 \cdot 5} + \frac{z^7}{3 \cdot 5 \cdot 7} + \dots \right) \end{aligned}$$

**Bottom line.** 1,000 years of mathematical formulas at your fingertips.

## Java function for $\Phi(z)$

```
public class Gaussian {
    public static double phi(double x)
        // as before

    public static double Phi(double z) {
        if (z < -8.0) return 0.0;
        if (z > 8.0) return 1.0;
        double sum = 0.0, term = z;
        for (int i = 3; sum + term != sum; i += 2) {
            sum = sum + term;
            term = term * z * z / i;
        }
        return 0.5 + sum * phi(z);
    }

    public static double Phi(double z, double mu, double sigma) {
        return Phi((z - mu) / sigma);
    }
}
```

accurate with absolute error less than  $8 \cdot 10^{-16}$

$$\Phi(z, \mu, \sigma) = \int_{-\infty}^z \phi(z, \mu, \sigma) = \Phi((z - \mu) / \sigma)$$

17

18

## SAT Scores

**Q.** NCAA requires at least 820 for Division I athletes. What fraction of test takers in 2000 do not qualify?

**A.**  $\Phi(820, 1019, 209) \approx 0.17051$ . [approximately 17%]

```
double fraction = Gaussian.Phi(820, 1019, 209);
```

19

## Gaussian Distribution

**Q.** Why relevant in mathematics?

**A.** Central limit theorem: under very general conditions, average of a set of random variables tends to the Gaussian distribution.

**Q.** Why relevant in the sciences?

**A.** Models a wide range of natural phenomena and random processes.

- Weights of humans, heights of trees in a forest.
- SAT scores, investment returns.

**Caveat.**

“Everybody believes in the exponential law of errors: the experimenters, because they think it can be proved by mathematics; and the mathematicians, because they believe it has been established by observation.”

— M. Lippman in a letter to H. Poincaré

20

## Building Functions

Functions enable you to build a new layer of abstraction.

- Takes you beyond pre-packaged libraries.
- You build the tools you need: `Gaussian.phi()`, ...

Process.

- Step 1: identify a useful feature.
- Step 2: implement it.
- Step 3: use it.
  
- Step 3': re-use it in **any** of your programs.

## Digital Audio

21

## Crash Course in Sound

**Sound.** Perception of the **vibration** of molecules in our eardrums.

**Concert A.** Sine wave, scaled to oscillate at 440Hz.

**Other notes.** 12 notes on chromatic scale, divided logarithmically.

note	<i>i</i>	frequency
A	0	440.00
A# or Bb	1	466.16
B	2	493.88
C	3	523.25
C# or Db	4	554.37
D	5	587.33
D# or Eb	6	622.25
E	7	659.26
F	8	698.46
F# or Gb	9	739.99
G	10	783.99
G# or Ab	11	830.61
A	12	880.00

$440 \times 2^{i/12}$

Notes, numbers, and waves

23

## Digital Audio

**Sampling.** Represent curve by sampling it at regular intervals.

5,512 samples/second, 137 samples

11,025 samples/second, 275 samples

22,050 samples/second, 551 samples

44,100 samples/second, 1,102 samples

audio CD

$$y(i) = \sin\left(\frac{2\pi \cdot i \cdot 440}{44,100}\right)$$

24

**Musical tone.** Create a music tone of a given frequency and duration.

```
public static double[] tone(double hz, double seconds) {
    int SAMPLE_RATE = 44100;
    int N = (int) (seconds * SAMPLE_RATE);
    double[] a = new double[N+1];
    for (int i = 0; i <= N; i++) {
        a[i] = Math.sin(2 * Math.PI * i * hz / SAMPLE_RATE);
    }
    return a;
}
```

$$y(i) = \sin\left(\frac{2\pi \cdot i \cdot hz}{44,100}\right)$$

**Remark.** Can use arrays as function return value and/or argument.

**Standard audio.** Library for playing digital audio.

```
public class StdAudio
{
    void play(String file)           play the given .wav file
    void play(double[] a)           play the given sound wave
    void play(double x)              play sample for 1/44100 second
    void save(String file, double[] a) save to a .wav file
    double[] read(String file)       read from a .wav file
}
```

**Concert A.** Play concert A for 1.5 seconds using `stdAudio`.

```
double[] a = tone(440, 1.5);
StdAudio.play(a);
```

library developed  
for this course  
(also broadly useful)

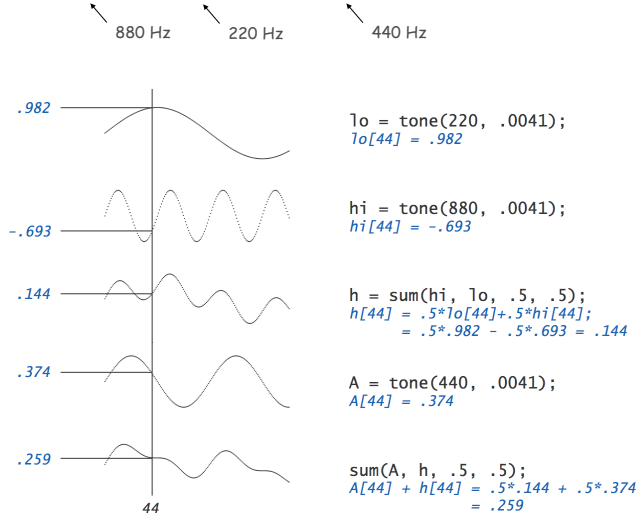

25

26

## Harmonics

**Concert A with harmonics.** Obtain richer sound by adding tones one octave above and below concert A.

27

## Harmonics

```
public class PlayThatTuneDeluxe {

    // return weighted sum of two arrays
    public static double[] sum(double[] a, double[] b, double awt, double bwt) {
        double[] c = new double[a.length];
        for (int i = 0; i < a.length; i++)
            c[i] = a[i]*awt + b[i]*bwt;
        return c;
    }

    // return a note of given pitch and duration
    public static double[] note(int pitch, double duration) {
        double hz = 440.0 * Math.pow(2, pitch / 12.0);
        double[] a = tone(1.0 * hz, duration);
        double[] hi = tone(2.0 * hz, duration);
        double[] lo = tone(0.5 * hz, duration);
        double[] h = sum(hi, lo, .5, .5);
        return sum(a, h, .5, .5);
    }

    public static double[] tone(double hz, double t)
        // see previous slide

    public static void main(String[] args)
        // see next slide
}
```

28

## Harmonics

**Play that tune.** Read in pitches and durations from standard input, and play using standard audio.

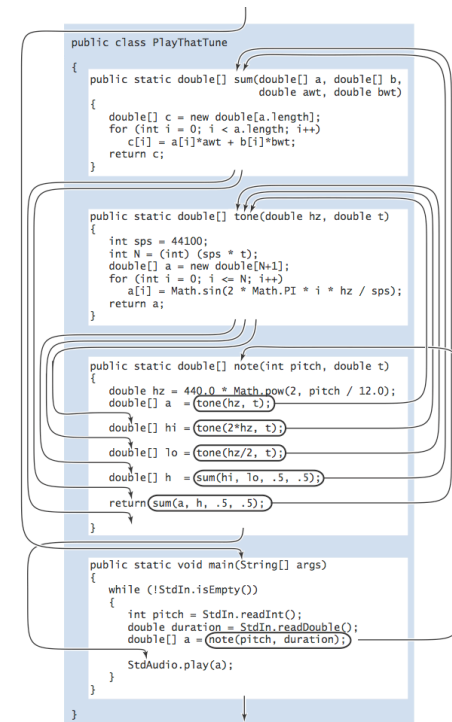

```
public static void main(String[] args) {
    while (!StdIn.isEmpty()) {
        int pitch = StdIn.readInt();
        double duration = StdIn.readDouble();
        double[] a = note(pitch, duration);
        StdAudio.play(a);
    }
}
```

```
% more elise.txt
7 .125
6 .125
7 .125
6 .125
7 .125
2 .125
5 .125
3 .125
0 .25
```

```
% java PlayThatTune < elise.txt
```

29

30

## 2.2 Libraries and Clients

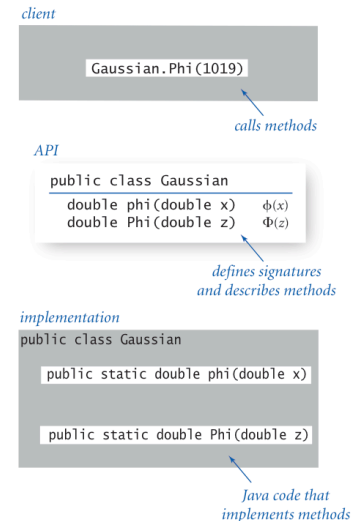

**Library.** A module whose methods are primarily intended for use by many other programs.

**Client.** Program that calls a library.

**API.** Contract between client and implementation.

**Implementation.** Program that implements the methods in an API.

# Random Numbers

“ The generation of random numbers is far too important to leave to chance. Anyone who considers arithmetical methods of producing random digits is, of course, in a state of sin. ”

Jon von Neumann (left), ENIAC (right)

Standard random. Our library to generate pseudo-random numbers.

```
public class StdRandom
    int uniform(int N)           integer between 0 and N-1
    double uniform(double lo, double hi)  real between lo and hi
    boolean bernoulli(double p)  true with probability p
    double gaussian()           normal, mean 0, standard deviation 1
    double gaussian(double m, double s)  normal, mean m, standard deviation s
    int discrete(double[] a)    i with probability a[i]
    void shuffle(double[] a)    randomly shuffle the array a[]
```

```
int getRandomNumber()
{
    return 4; // chosen by fair dice roll.
             // guaranteed to be random.
}
```

## Standard Random

```
public class StdRandom {
    // between a and b
    public static double uniform(double a, double b) {
        return a + Math.random() * (b-a);
    }

    // between 0 and N-1
    public static int uniform(int N) {
        return (int) (Math.random() * N);
    }

    // true with probability p
    public static boolean bernoulli(double p) {
        return Math.random() < p;
    }

    // gaussian with mean = 0, stddev = 1
    public static double gaussian()
        /* see Exercise 1.2.27 */

    // gaussian with given mean and stddev
    public static double gaussian(double mean, double stddev) {
        return mean + (stddev * gaussian());
    }

    ...
}
```

## Unit Testing

Unit test. Include main() to test each library.

```
public class StdRandom {
    ...

    public static void main(String[] args) {
        int N = Integer.parseInt(args[0]);
        for (int i = 0; i < N; i++) {
            StdOut.printf(" %2d ", uniform(100));
            StdOut.printf("%8.5f ", uniform(10.0, 99.0));
            StdOut.printf("%5b ", bernoulli(.5));
            StdOut.printf("%7.5f ", gaussian(9.0, .2));
            StdOut.println();
        }
    }
}
```

```
% java StdRandom 5
61 21.76541 true 9.30910
57 43.64327 false 9.42369
31 30.86201 true 9.06366
92 39.59314 true 9.00896
36 28.27256 false 8.66800
```

## Using a Library

```
public class RandomPoints {
    public static void main(String args[]) {
        int N = Integer.parseInt(args[0]);
        for (int i = 0; i < N; i++) {
            double x = StdRandom.gaussian(0.5, 0.2);
            double y = StdRandom.gaussian(0.5, 0.2);
            StdDraw.point(x, y);
        }
    }
}
```

use library name  
to invoke method

```
% javac RandomPoints.java
% java RandomPoints 10000
```

7

## Standard Statistics

Ex. Library to compute statistics on an array of real numbers.

```
public class StdStats
double max(double[] a)           largest value
double min(double[] a)          smallest value
double mean(double[] a)         average
double var(double[] a)          sample variance
double stddev(double[] a)       sample standard deviation
double median(double[] a)       median
void plotPoints(double[] a)     plot points at (i, a[i])
void plotLines(double[] a)     plot lines connecting points at (i, a[i])
void plotBars(double[] a)      plot bars to points at (i, a[i])
```

$$\mu = \frac{a_0 + a_1 + \dots + a_{n-1}}{n}, \quad \sigma^2 = \frac{(a_0 - \mu)^2 + (a_1 - \mu)^2 + \dots + (a_{n-1} - \mu)^2}{n-1}$$

*mean* *sample variance*

9

## Statistics

## Standard Statistics

Ex. Library to compute statistics on an array of real numbers.

```
public class StdStats {
    public static double max(double[] a) {
        double max = Double.NEGATIVE_INFINITY;
        for (int i = 0; i < a.length; i++)
            if (a[i] > max) max = a[i];
        return max;
    }

    public static double mean(double[] a) {
        double sum = 0.0;
        for (int i = 0; i < a.length; i++)
            sum = sum + a[i];
        return sum / a.length;
    }

    public static double stddev(double[] a)
        // see text
}
```

10

# Modular Programming

## Modular programming.

- Divide program into self-contained pieces.
- Test each piece individually.
- Combine pieces to make program.

## Ex. Flip N coins. How many heads?

- Read arguments from user.
- Flip one fair coin.
- Flip N fair coins and count number of heads.
- Repeat simulation, counting number of times each outcome occurs.
- Plot histogram of empirical results.
- Compare with theoretical predictions.

% java Bernoulli 20 100000

## Bernoulli Trials

```
public class Bernoulli {
    public static int binomial(int N) {
        int heads = 0;
        for (int j = 0; j < N; j++)
            if (StdRandom.bernoulli(0.5)) heads++;
        return heads;
    }

    public static void main(String[] args) {
        int N = Integer.parseInt(args[0]);
        int T = Integer.parseInt(args[1]);

        int[] freq = new int[N+1];
        for (int i = 0; i < T; i++)
            freq[binomial(N)]++;

        double[] normalized = new double[N+1];
        for (int i = 0; i <= N; i++)
            normalized[i] = (double) freq[i] / T;
        StdStats.plotBars(normalized);

        double mean = N / 2.0, stddev = Math.sqrt(N) / 2.0;
        double[] phi = new double[N+1];
        for (int i = 0; i <= N; i++)
            phi[i] = Gaussian.phi(i, mean, stddev);
        StdStats.plotLines(phi);
    }
}
```

flip N fair coins; return # heads

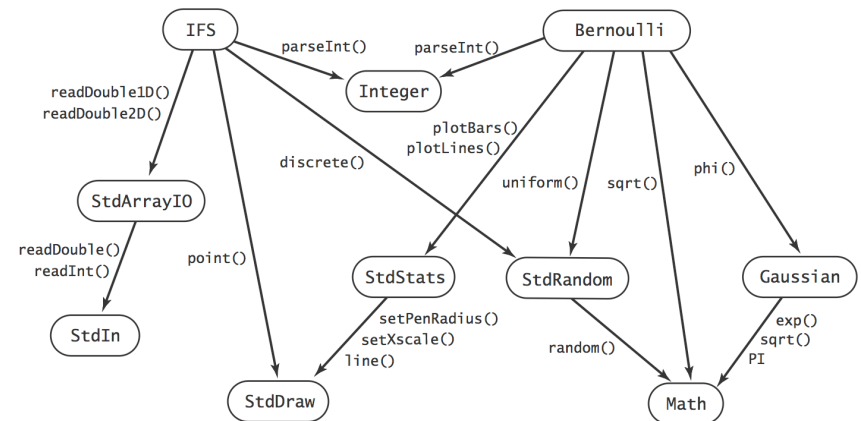

perform T trials of N coin flips each

plot histogram of number of heads

theoretical prediction

## Dependency Graph

Modular programming. Build relatively complicated program by combining several small, independent, modules.

## Libraries

### Why use libraries?

- *Makes code easier to understand.*
- *Makes code easier to debug.*
- *Makes code easier to maintain and improve.*
- *Makes code easier to reuse.*
