

# 3D Modeling

COS 426

# Syllabus

I. Image processing

II. Modeling

III. Rendering

IV. Animation

Image Processing  
(Rusty Coleman, CS426, Fall99)

Rendering  
(Michael Bostock, CS426, Fall99)

Modeling  
(Dennis Zorin, CalTech)

Animation  
(Angel, Plate 1)

# What is 3D Modeling?

- Topics in computer graphics
  - Imaging = *representing 2D images*
  - Rendering = *constructing 2D images from 3D models*
  - Modeling = *representing 3D objects*
  - Animation = *simulating changes over time*

# Modeling

- How do we ...
  - Represent 3D objects in a computer?
  - Acquire computer representations of 3D objects?
  - Manipulate computer representations of 3D objects?

# 3D Object Representations

How can this object be represented in a computer?

# 3D Object Representations

How about this one?

# 3D Object Representations

This one?

Stanford Graphics Laboratory

# 3D Object Representations

This one?

# 3D Object Representations

- Points
  - Range image
  - Point cloud
- Surfaces
  - Polygonal mesh
  - Subdivision
  - Parametric
  - Implicit
- Solids
  - Voxels
  - BSP tree
  - CSG
  - Sweep
- High-level structures
  - Scene graph
  - Application specific

# Equivalence of Representations

- Thesis:
  - Each representation has enough expressive power to model the shape of any geometric object
  - It is possible to perform all geometric operations with any fundamental representation
- Analogous to Turing-equivalence
  - Computers and programming languages are Turing-equivalent, but each has its benefits...

# Why Different Representations?

## Efficiency for different tasks

- Acquisition
- Rendering
- Manipulation
- Animation
- Analysis

Data structures determine algorithms

# Modeling Operations

What can we do with a 3D object representation?

- Edit
- Transform
- Smooth
- Render
- Animate
- Morph
- Compress
- Transmit
- Analyze
- etc.

Digital Michelangelo

Pirates of the Caribbean

Thouis "Ray" Jones

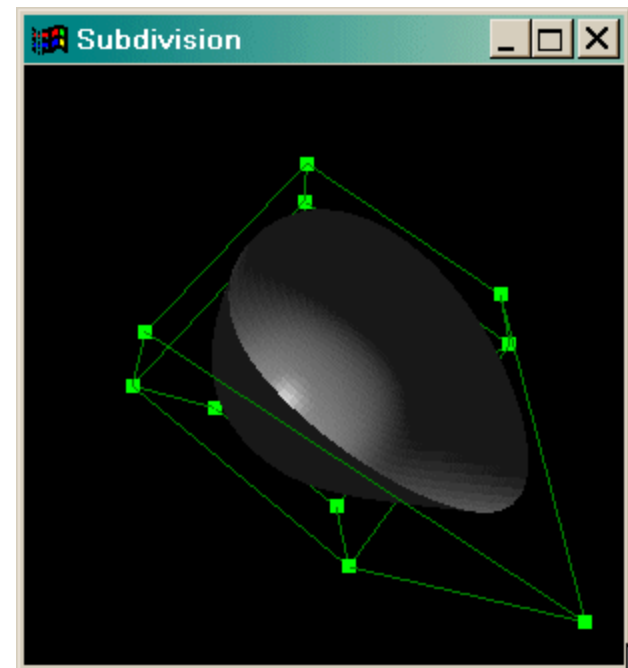

Sand et al.

# 3D Object Representations

Desirable properties depend on intended use

- Easy to acquire
- Accurate
- Concise
- Intuitive editing
- Efficient editing
- Efficient display
- Efficient intersections
- Guaranteed validity
- Guaranteed smoothness
- etc.

# Outline

- Points
  - Range image
  - Point cloud
- Surfaces
  - Polygonal mesh
  - Subdivision
  - Parametric
  - Implicit
- Solids
  - Voxels
  - BSP tree
  - CSG
  - Sweep
- High-level structures
  - Scene graph
  - Application specific

# Range Image

Set of 3D points mapping to pixels of depth image

- Can be acquired from range scanner

Cyberware

Stanford

Range Image

Tessellation

Range Surface

# Range Image

- Image: stores an intensity / color along each of a set of regularly-spaced rays in space
- **Range image:** stores a **depth** along each of a set of regularly-spaced rays in space
- Not a complete 3D description: does not store objects occluded (from some viewpoint)
- *View-dependent* scene description

# Terminology

- Range images
- Range surfaces
- Depth images
- Depth maps
- Height fields
- 2½-D images
- Surface profiles
- xyz maps
- ...

# Point Cloud

Unstructured set of 3D point samples

- Acquired from range finder, computer vision, etc

Polhemus

Microscribe-3D

Hoppe

Hoppe

# Outline

- Points
  - Range image
  - Point cloud
- Surfaces
  - Polygonal mesh
  - Subdivision
  - Parametric
  - Implicit
- Solids
  - Voxels
  - BSP tree
  - CSG
  - Sweep
- High-level structures
  - Scene graph
  - Application specific

# Polygonal Mesh

Connected set of polygons (usually triangles)

# Subdivision Surface

## Coarse mesh & subdivision rule

- Smooth surface is **limit** of sequence of refinements

# Parametric Surface

## Tensor-product spline patches

- Each patch is parametric function
- Careful constraints to maintain continuity

$$x = F_x(u, v)$$

$$y = F_y(u, v)$$

$$z = F_z(u, v)$$

FvDFH Figure 11.44

# Implicit Surface

Set of all points satisfying:  $F(x,y,z) = 0$

Polygonal Model

Implicit Model

# Outline

- **Points**
  - Range image
  - Point cloud
- **Surfaces**
  - Polygonal mesh
  - Subdivision
  - Parametric
  - Implicit
- **Solids**
  - Voxels
  - BSP tree
  - CSG
  - Sweep
- **High-level structures**
  - Scene graph
  - Application specific

# Voxel grid

## Uniform volumetric grid of samples:

- Occupancy  
(object vs. empty space)
- Density
- Color
- Other function  
(speed, temperature, etc.)
  
- Often acquired via  
simulation or from  
CAT, MRI, etc.

FvDFH Figure 12.20

# BSP Tree

Hierarchical **B**inary **S**pace **P**artition with solid/empty cells labeled

- Constructed from polygonal representations

Object

Binary Spatial Partition

Binary Tree

# CSG

**C**onstructive **S**olid **G**eometry: set operations (union, difference, intersection) applied to simple shapes

FvDFH Figure 12.27

H&B Figure 9.9

# Sweep

Solid swept by curve along trajectory

Removal Path

Sweep Model

# Outline

- Points
  - Range image
  - Point cloud
- Surfaces
  - Polygonal mesh
  - Subdivision
  - Parametric
  - Implicit
- Solids
  - Voxels
  - BSP tree
  - CSG
  - Sweep
- High-level structures
  - Scene graph
  - Application specific

# Scene Graph

Union of objects at leaf nodes

Bell Laboratories

[avalon.viewpoint.com](http://avalon.viewpoint.com)

# Application Specific

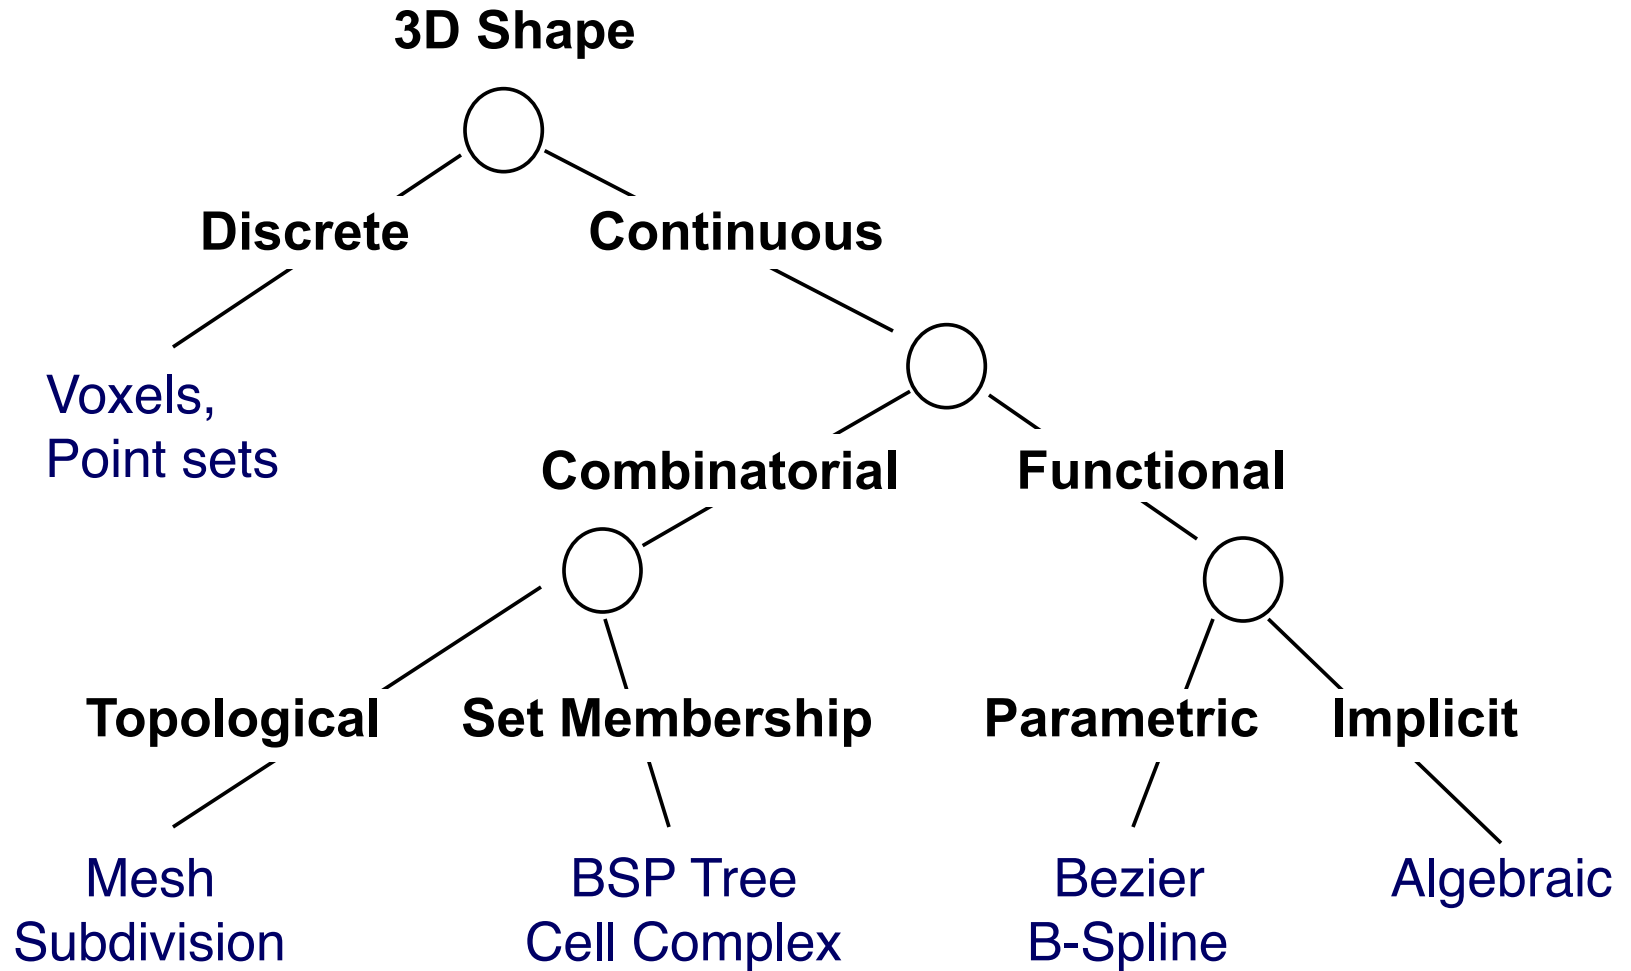

**Apo A-1**  
*(Theoretical Biophysics Group,  
University of Illinois at Urbana-Champaign)*

**Architectural Floorplan**  
*(CS Building, Princeton University)*

# Taxonomy of 3D Representations

# Equivalence of Representations

- Thesis:
  - Each representation has enough expressive power to model the shape of any geometric object
  - It is possible to perform all geometric operations with any fundamental representation
- Analogous to Turing-equivalence
  - Computers and programming languages are Turing-equivalent, but each has its benefits...

# Computational Differences

- **Efficiency**
  - Representational complexity (e.g. volume vs. surface)
  - Computational complexity (e.g.  $O(n^2)$  vs  $O(n^3)$  )
  - Space/time trade-offs (e.g. z-buffer)
  - Numerical accuracy/stability (e.g. degree of polynomial)
- **Simplicity**
  - Ease of acquisition
  - Hardware acceleration
  - Software creation and maintenance
- **Usability**
  - Designer interface vs. computational engine

# Upcoming Lectures

- Points
  - Range image
  - Point cloud
- Surfaces
  - Polygonal mesh
  - Subdivision
  - Parametric
  - Implicit
- Solids
  - Voxels
  - BSP tree
  - CSG
  - Sweep
- High-level structures
  - Scene graph
  - Application specific
