# Toon shading

Remap  $n \cdot l$  from lighting calculation

- Or  $n \cdot v$  for headlight
- Can be done by texture lookup (1D)

# How to Describe Shape-Conveying Lines?

- Image-space features
- Object-space features
  - View-independent
  - View-dependent

[Flaxman 1805]

# Image-Space Lines

- + Intuitive motivation; well-suited for GPU
- Difficult to stylize

## Examples:

- Isophotes (toon-shading boundaries)
- Edges (e.g., [Canny 1986])
- Ridges, valleys of illumination  
[Pearson 1985, Rieger 1997,  
DeCarlo 2003, Lee 2007, ...]

# Image Edges and Extremal Lines

## Edges:

Local maxima of  
gradient magnitude,  
in gradient direction

## Ridges/valleys:

Local minima/maxima of  
intensity, in direction of  
max Hessian eigenvector

# View-Independent Object-Space Lines

- + Intrinsic properties of shape; can be precomputed
- Under changing view, can be misinterpreted as surface markings

# View-Independent Object-Space Lines

Topo lines: constant altitude

# View-Independent Object-Space Lines

Creases: infinitely sharp folds

# View-Independent Object-Space Lines

## Ridges and valleys (crest lines)

- Local maxima of curvature
- Sometimes effective, sometimes not

# View-Dependent Object-Space Lines

- + Seem to be perceived as conveying shape
- Must be recomputed per frame

# What Lines to Draw?

## Silhouettes:

- Boundaries between object and background

# What Lines to Draw?

Occluding contours:

- Depth discontinuities
- Surface normal perpendicular to view direction

# Occluding Contours

For any shape: locations of depth discontinuities

- View dependent
- Also called “interior and exterior silhouettes”

# Occluding Contours

For smooth shapes: points at which  $n \cdot v = 0$

# Occluding Contours on Meshes

Applying either definition on polygonal meshes can result in messy lines

# Occluding Contours on Meshes [Hertzmann 00]

Alternative: interpolate normals within faces

- Start with per-vertex normals
- Interpolate per-face (same as Phong shading)
- Compute  $n \cdot v$  at each point, find zero crossings
- Potential snag: visibility

# Occluding Contours on Meshes

Contours along edges

Frontfacing

Backfacing

Contour

Contours within faces

# What Lines to Draw?

There are other lines...

# What Lines to Draw?

There are other lines...

# What Lines to Draw?

There are other lines...

Hypothesis: some are “almost contours”

# Suggestive Contours

“Almost contours”:

- Points that become contours in nearby views

contours

contours +  
suggestive contours

# Suggestive Contours: Definition 1

Contours in nearby viewpoints

(not corresponding to contours in closer views)

# Suggestive Contours: Definition 2

$n \cdot v$  not quite zero, but a local minimum  
(in the projected view direction  $w$ )

# Crease Stylization

“Rubber-stamping”

Synthesis from Example

Synthesis uses Markov model.

Similar to “video textures” [Schödl 00]

# Stylization as Offsets

- Artist over-sketches crease
- Stylization recorded as 2D offsets
- Applied to new base path

# Silhouette Stylization

Silhouettes are view-dependent.

- Problem #1: localized stylization?
- Solution: “rubber-stamp” globally

# Silhouette Tracking

Silhouettes are view-dependent.

- Problem #2: parameterization coherence
- Solution: screen-space tracking

# WYSIWYG NPR

[Kalnins02]

- Draw into 3D scene
- Retain style in new views
- Ensure coherent animation

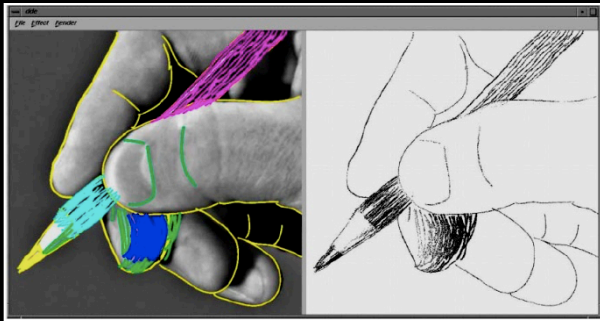

# Aesthetic flexibility

# Abstraction in NPR

## User guided approaches

- the user explicitly marks the important content

[Durand et al. 2001]

[Hertzmann 2001]

# Abstraction in NPR

Indication in pen and ink illustration

– the user specified what content was important

[Winkenbach and Salesin 1994]

# Abstraction in NPR

Provide control over point of emphasis  
– control clutter in the rendered image

[Cole et al. 2006]

# Abstraction in NPR

## Rendering specific content: trees

- programatically leave out lines in center of tree

[Kowalski et al.1999]

[Deussen 2000]

# Abstraction in NPR

Select elements based on density and clutter  
– drop strokes in areas of high density

[Winson and Ma 2004]

[Grabli et al. 2004]

# Abstraction in NPR

## User guided approaches

- infer important content from a user's eye movements
- evaluate using eye tracking [Santella and DeCarlo 2004]

[DeCarlo and Santella 2002]

# Eye movements

Recorded using commercial eye-trackers

# Results...

# Summary

NPR provides control over style, abstraction

Common ingredients:  
toon shading,  
outline strokes,  
hatching, paint,  
paper effect
