

Likelihood Inference for Discretely Sampled Diffusions

Yacine Ait-Sahalia

Department of Economics
Director, Bendheim Center for Finance
Princeton University

I will discuss the computation of closed-form expansions for the log-likelihood function of arbitrary multivariate diffusions. The coefficients of the expansion are calculated explicitly by exploiting the special structure afforded by the diffusion model. Examples of interest in financial statistics and Monte Carlo evidence are included, along with the convergence of the expansion to the true likelihood function
