

Princeton University  
COS 217: Introduction to Programming Systems  
Trace of an Assembly Language Function Call

Registers

Memory

CPU is executing f().

Flow of control reaches "call g".

Stack

COS 217: Introduction to Programming Systems  
Trace of an Assembly Language Function Call

Registers

Memory

CPU executes "call g"  
instruction.

Part 1: CPU pushes  
RIP to stack.

Stack

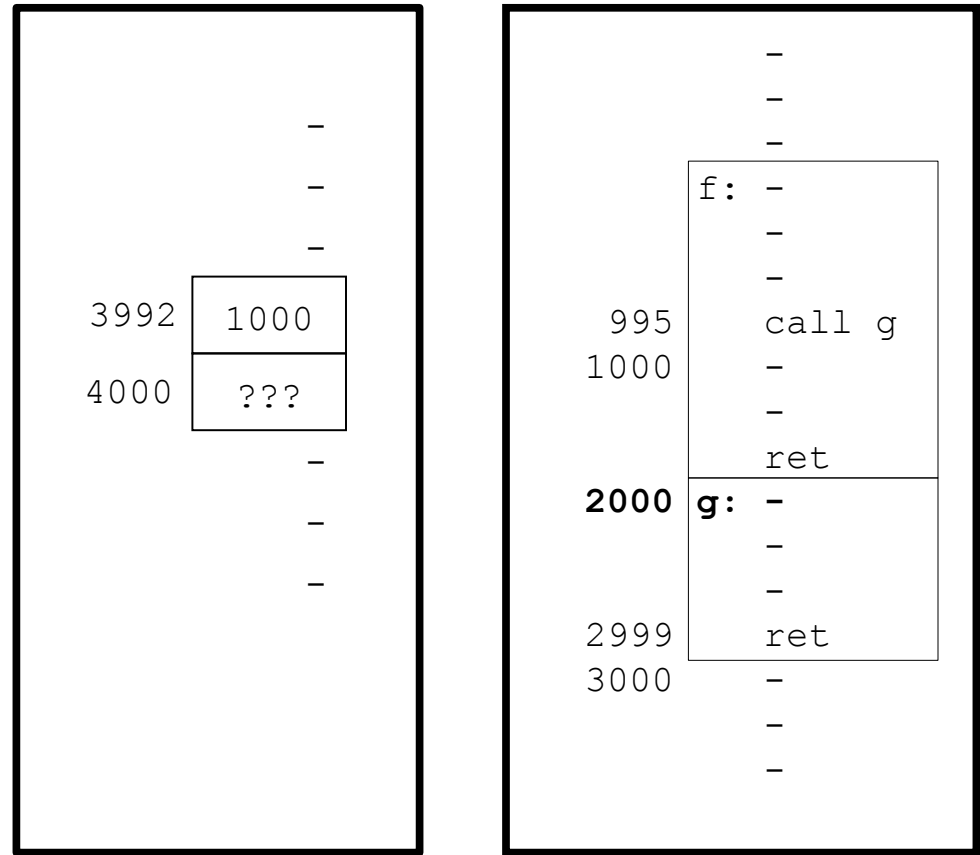

Text

**COS 217: Introduction to Programming Systems**  
**Trace of an Assembly Language Function Call**

**Registers**

**Memory**

**CPU executes "call g" instruction.**

**Part 2: CPU moves address denoted by "g" to RIP.**

**Stack**

Princeton University  
COS 217: Introduction to Programming Systems  
Trace of an Assembly Language Function Call

Registers

Memory

CPU fetches the instruction at `g`.

CPU proceeds.

COS 217: Introduction to Programming Systems  
Trace of an Assembly Language Function Call

Registers

Memory

CPU fetches "ret"  
instruction.

Stack

Text

Princeton University  
COS 217: Introduction to Programming Systems  
Trace of an Assembly Language Function Call

Registers

Memory

CPU executes  
"ret" instruction:

CPU pops from  
stack to RIP

Stack
