## Princeton University COS 217: Introduction to Programming Systems The Linux Operating System and the Bash Shell

Bash		C Applicat	ion Programs
Standar	d C	Functions	
Linux System-Level Functions			
Linux			
Hardware			

File Names and Directory Names		
/dir1//dirN	Absolute dname	
dir1//dirN	Relative dname	
/dir1//file	Absolute fname	
dir1//file	Relative fname	

Special File Name and Directory Name Characters		
fnameord*name	* matches 0 or more characters	
fnameord?name	? matches any single character	
"fname or dname"	" allows whitespace in a dname or fname	
'fname or dname'	' allows whitespace in a dname or fname	
fnameord\'name	Backslash (escape) character allows special characters in a dname or fname	
~loginid	Home directory of <i>loginid</i>	
~	Your home directory	
	Parent of working directory	
	Working directory	

A command marked with "(bash)" is a Bash built-in command. A command marked with "(ext)" causes Bash to execute a program that is external to Bash, that is, a program that exists in the file system.

Command for Getting Help	
man [section] pagename	(ext) Write to stdout the manual page (from section) whose name is pagename. Section 1 describes Linux commands (e.g. cat, ls). Section 2 describes Linux system-level functions (e.g. brk(), fork(), dup()). Section 3 describes standard C functions (e.g. printf(), strlen()).

Directory-Related Commands		
pwd	(bash, ext) Write (print) the name of the working directory to stdout	
cd [dname]	(bash) Make <i>dname</i> the working directory	
ls [-la] [dname]	(ext) List the contents of <i>dname</i> to stdout	
ls [-la] [fname]	(ext) List the attributes of <i>fname</i> to stdout	
mkdir <i>dname</i>	(ext) Create dname	
rmdir dname	(ext) Destroy the empty directory dname	

File-Related Commands	
cat	(ext) Concatenate (write) stdin to stdout
cat fname	(ext) Concatenate (write) fname to stdout
more fname	(ext) Write fname to stdout one screen at a time
less fname	(ext) Write fname, to stdout one screen at a time
	The man command pipes its output through less
xxd fname	(ext) Hexdecimal dump <i>fname</i> to stdout
cp [-i] sourcefname targetfname	(ext) Copy sourcefname to targetfname
cp [-i] sourcefname targetdname	(ext) Copy sourcefname to targetdname
cp -r sourcedname targetdname	(ext) Copy (recursively) sourcedname to targetdname
mv [-i] sourcefname targetfname	(ext) Rename sourcefname to targetfname
mv [-i] sourcefname targetdname	(ext) Move sourcefname to targetdname
rm [-i] fname	(ext) Remove fname
rm -r [-i] dname [fname]	(ext) Remove dname (recursively) and fname

Special Command Charact	ers
command 0< fname	Redirect stdin to fname
command < fname	
command 1> fname	Redirect stdout to <i>fname</i>
command > fname	
command 2> fname	Redirect stderr to fname
command 1> fname 2>&1	Redirect stdout and stderr to fname
command1   command2	Pipe from command1 to command2
^d	End of file
command &	Run command as a background process
^Z	Turn my foreground process into a stopped background process
^c	Send a SIGINT signal
<b>↑</b>	Scroll backward through the command history list
<b>→</b>	Scroll forward through the command history list
!prefix	Reissue the most recently issued command that begins with prefix
!commandnum	Reissue the command whose number is commandnum (see the "history"
	command)

Configuration Commands	
source fname	(bash) Execute the shell script in fname
export variable=value	(bash) Set environment variable to value
export PATH=dname1:dname2:	(bash) Set the PATH environment variable indicating that Bash should search <i>dname1</i> , <i>dname2</i> , to find commands that are
avenue MANIDATI I elemento di elemento di	specified as relative fnames
export MANPATH=dname1:dname2:	(bash) Set the MANPATH environment variable indicating that the man command should search <i>dname1</i> , <i>dname2</i> , to find man pages
variable=value	(bash) Set shell variable to value
PS1="\h:\w\\$ "	(bash) Set the PS1 shell variable to indicate that the command prompt should contain the name of the host computer, a colon, the name of the working directory, a dollar sign, and a space
set –o shelloption	(bash) Turn on shelloption
set +o shelloption	(bash) Turn off shelloption
set –o ignoreeof	(bash) Turn on the ignoreeof shell option to indicate that ^D entered at the Bash prompt should not terminate Bash
set –o noclobber	(bash) Turn on the noclobber shell option to indicate that Bash should not overwrite files via redirection
alias aliasname=string	(bash) Create an alias definition such that <i>aliasname</i> as an abbreviation for <i>string</i>
unalias <i>aliasname</i>	(bash) Destroy the alias definition that defines aliasname

File and Directory Permission Commands	
id	(ext) Write to stdout my login id and the group(s) to which I belong
chmod mask fnameordname	(ext) Set the permissions of <i>fnameordname</i> as indicated by <i>mask</i>
chmod {u,g,o,a}{+,-}{r,w,x} fnameordname	(ext) Set the permissions of <i>fnameordname</i> for its owner (u), group (g), other (o), or all (a) by adding (+) or removing (-) read (r), write (w), or execute (x) permissions
umask	(Bash) Write to stdout the default permissions used when creating new files and directories
umask <i>mask</i>	(Bash) Set the default permissions used when creating new files and directories as indicated by <i>mask</i>

Software Development Commands	
emacs	(ext) Create or edit a text file using the Emacs editor
gcc217	(ext) Preprocess, compile, assemble, and link a program using options appropriate for COS 217; a variant of gcc
gdb	(ext) Debug a program
make	(ext) Build a program
ar	(ext) Create an archive file containing object code
gprof	(ext) Analyze the performance of a program

Miscellaneous Commands		
history	(bash) Write a numbered command history list to stdout	
wc [fname]	(ext) Write a count of characters, words, and lines in <i>fname</i> (or stdin) to stdout	
date	(ext) Write the date and time to stdout	
printenv [variable]	(ext) Write the definition of environment <i>variable</i> (or of all environment variables) to stdout	
echo [arg]	(bash, ext) Write arg to stdout	
who	(ext) Write information about current users to stdout	
grep pattern fname	(ext) Write each line of <i>fname</i> that contains <i>pattern</i> to stdout	
sort [fname]	(ext) Write each line of <i>fname</i> (or stdin) in lexicographic order to stdout	
diff fname1 fname2	(ext) Write an indication of the differences between the contents of fname1 and	
	fname2 to stdout	
which command	(ext) Search PATH for command, and write the dname where it was found to stdout	

Process Control Commands		
jobs	(bash) Write the names and jobnums of my background processes to stdout	
fg [%jobnum]	(bash) Move my background process with the given jobnum to the foreground	
bg [% <i>jobnum</i> ]	(bash) Turn my stopped background process into a running background	
	process	
kill [–signal] %jobnum	(bash) Send signal to my background process with the given jobnum	
ps	(ext) Display a list of my processes	
kill [–signal] pid	(ext) Send signal to the process whose id is pid	
exit	(bash) Exit Bash	
logout	(bash) Exit Bash and the terminal session
