

# NN-QUERY PSEUDOCODE

## NN-QUERY PSEUDOCODE

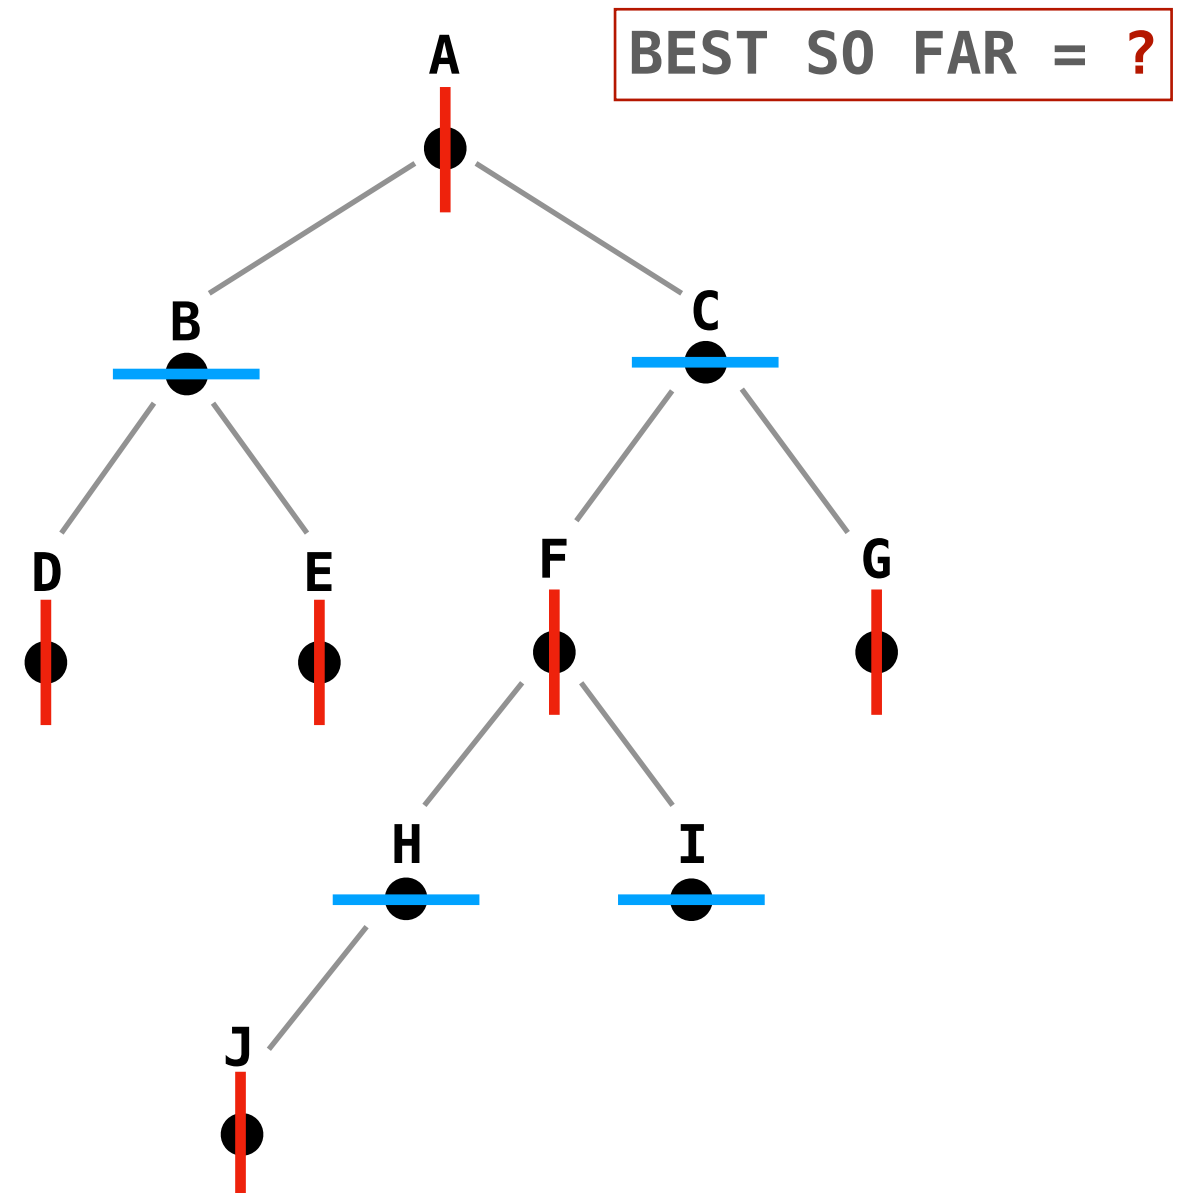

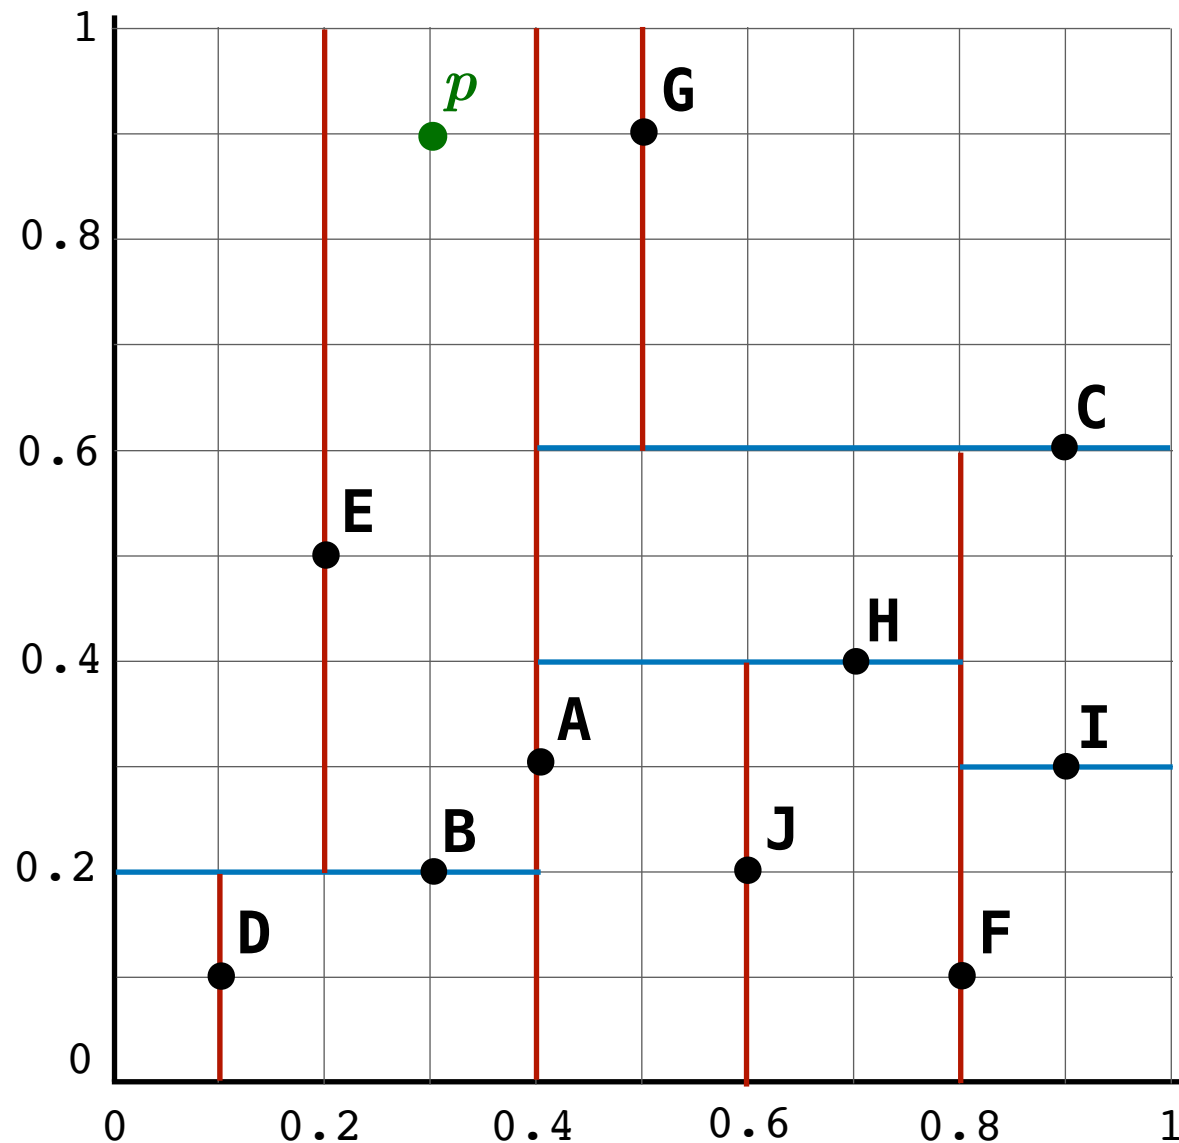

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

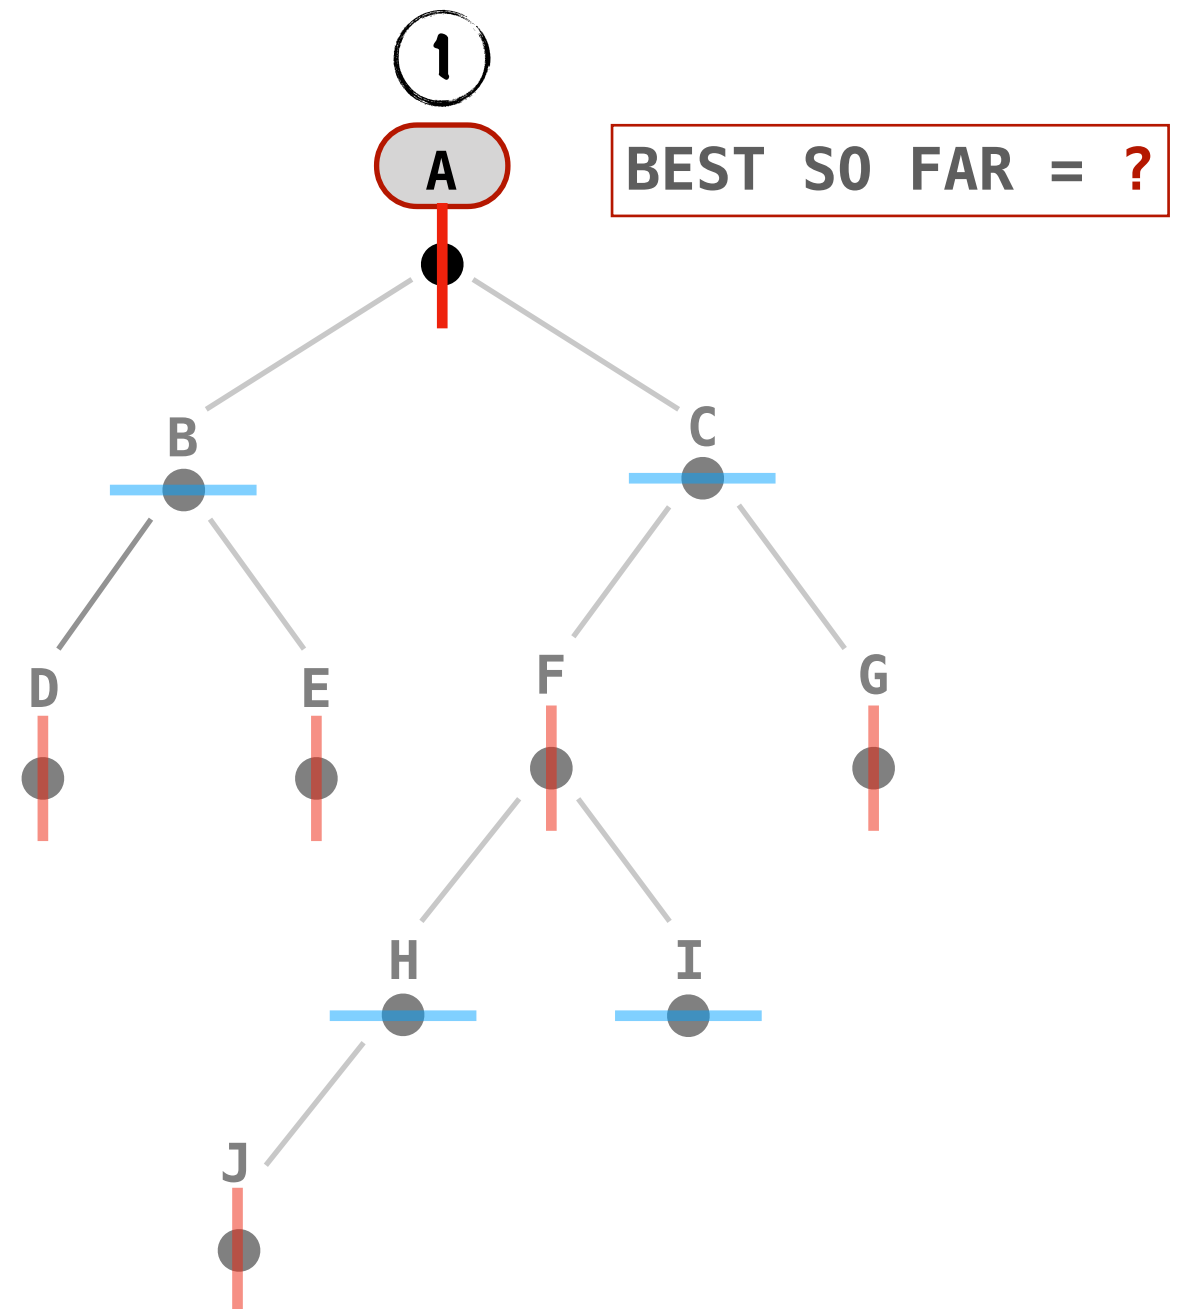

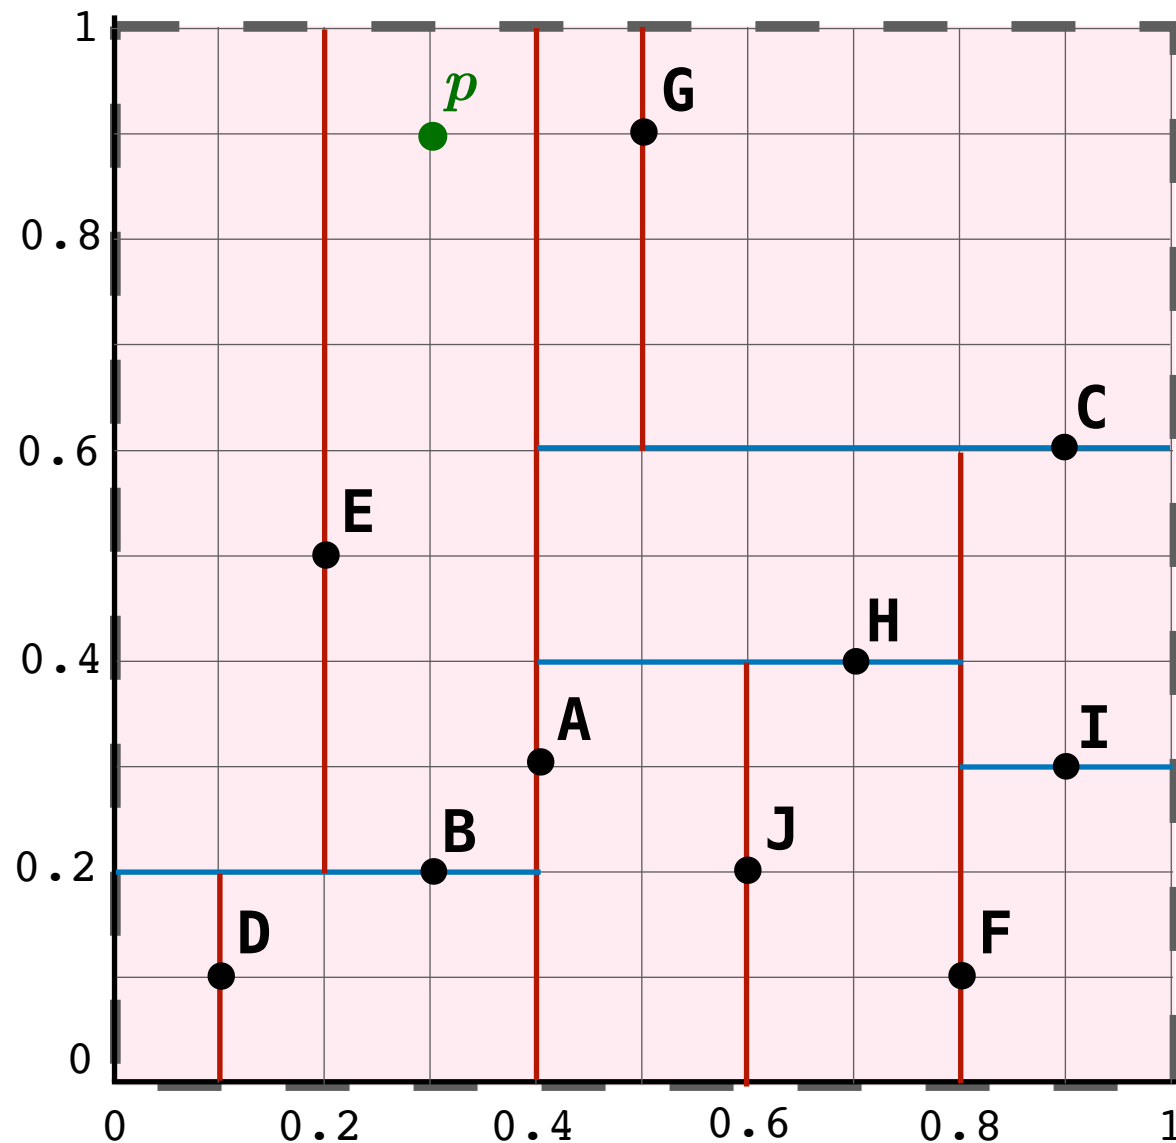

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

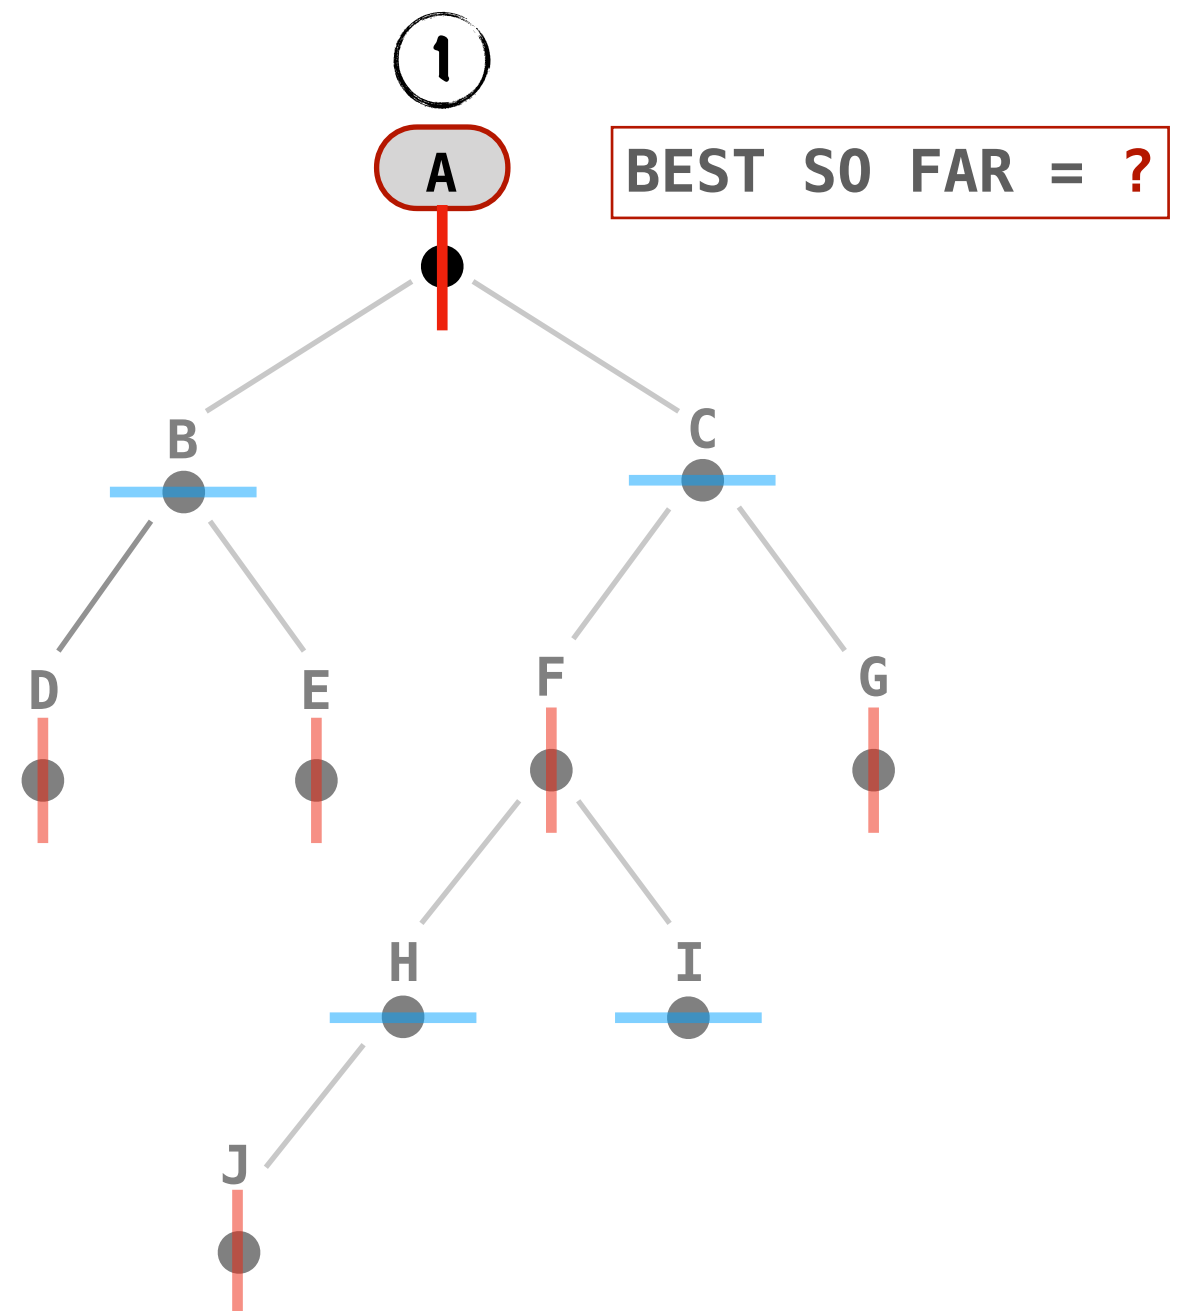

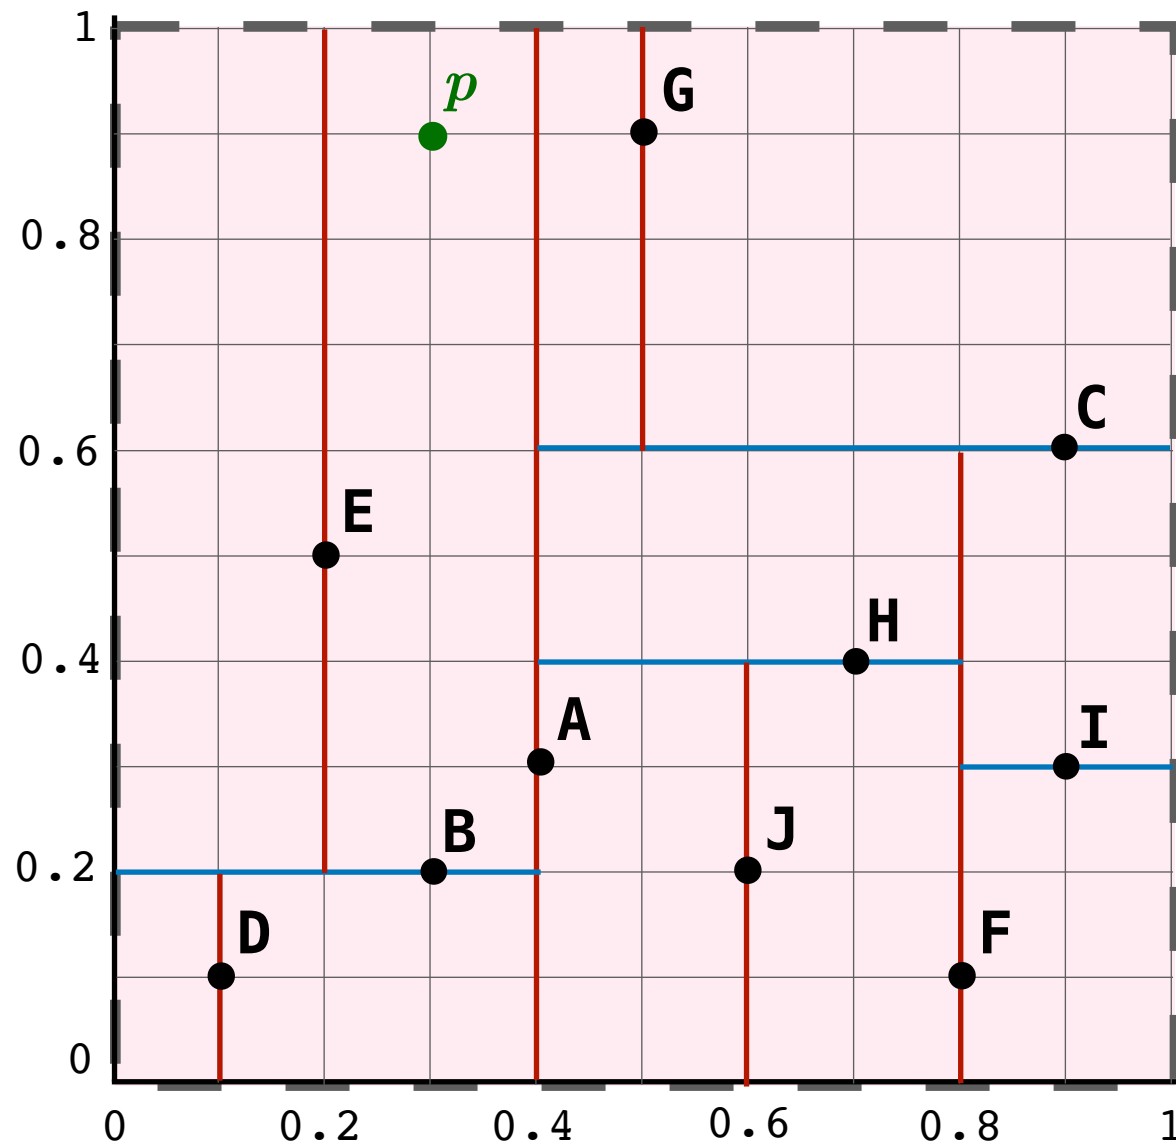

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

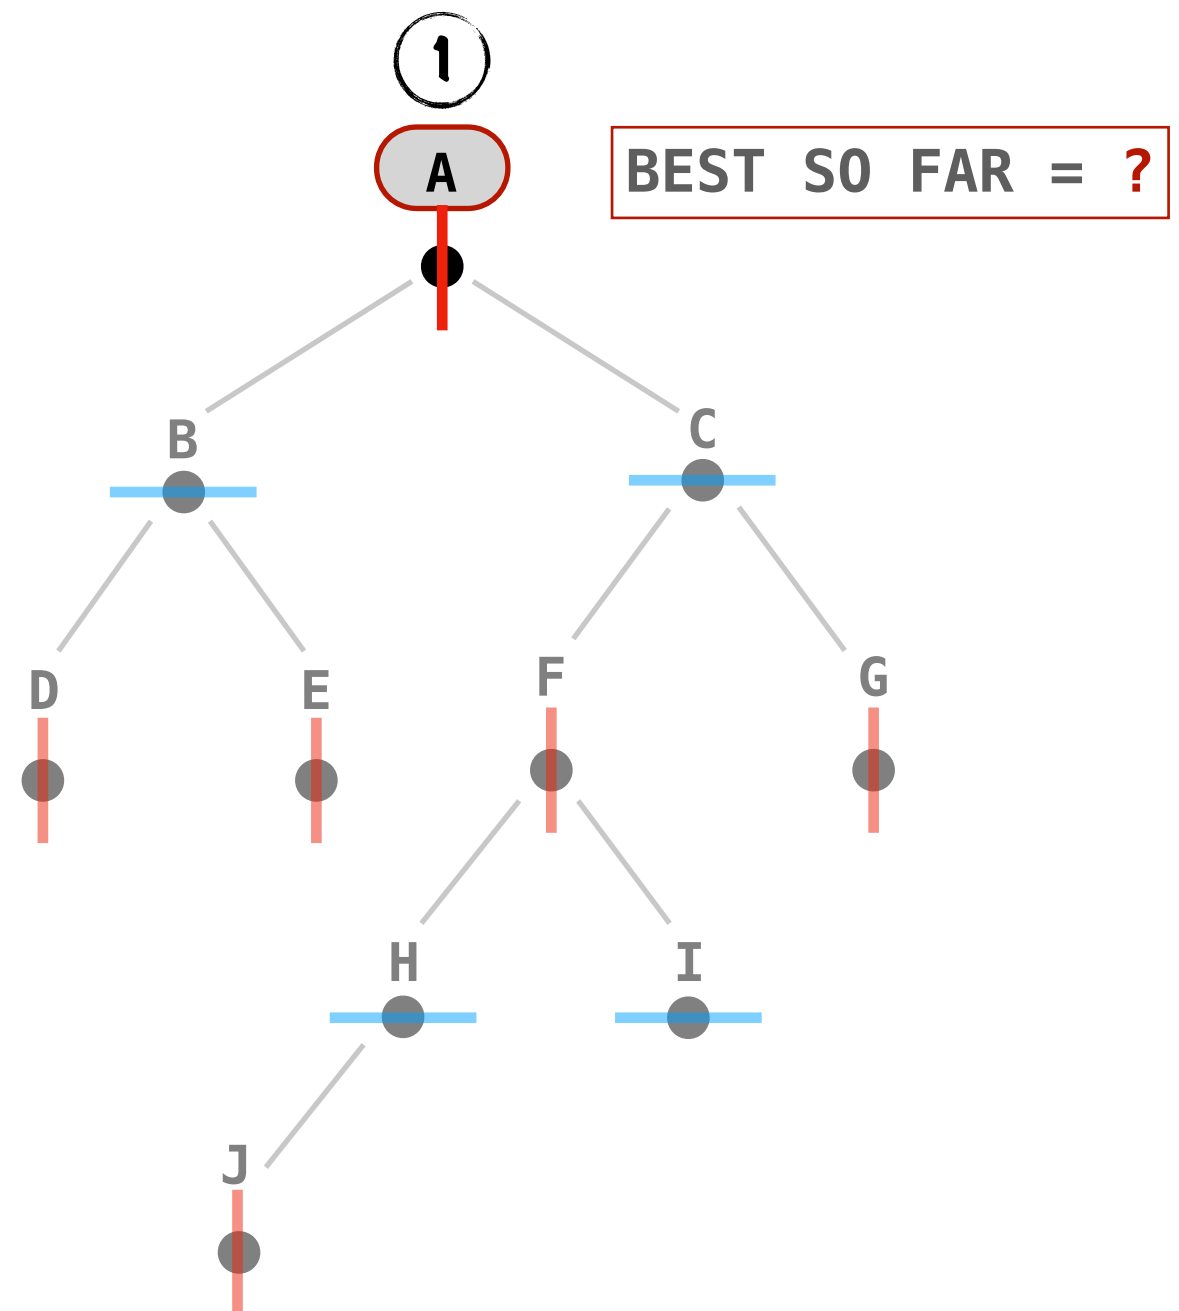

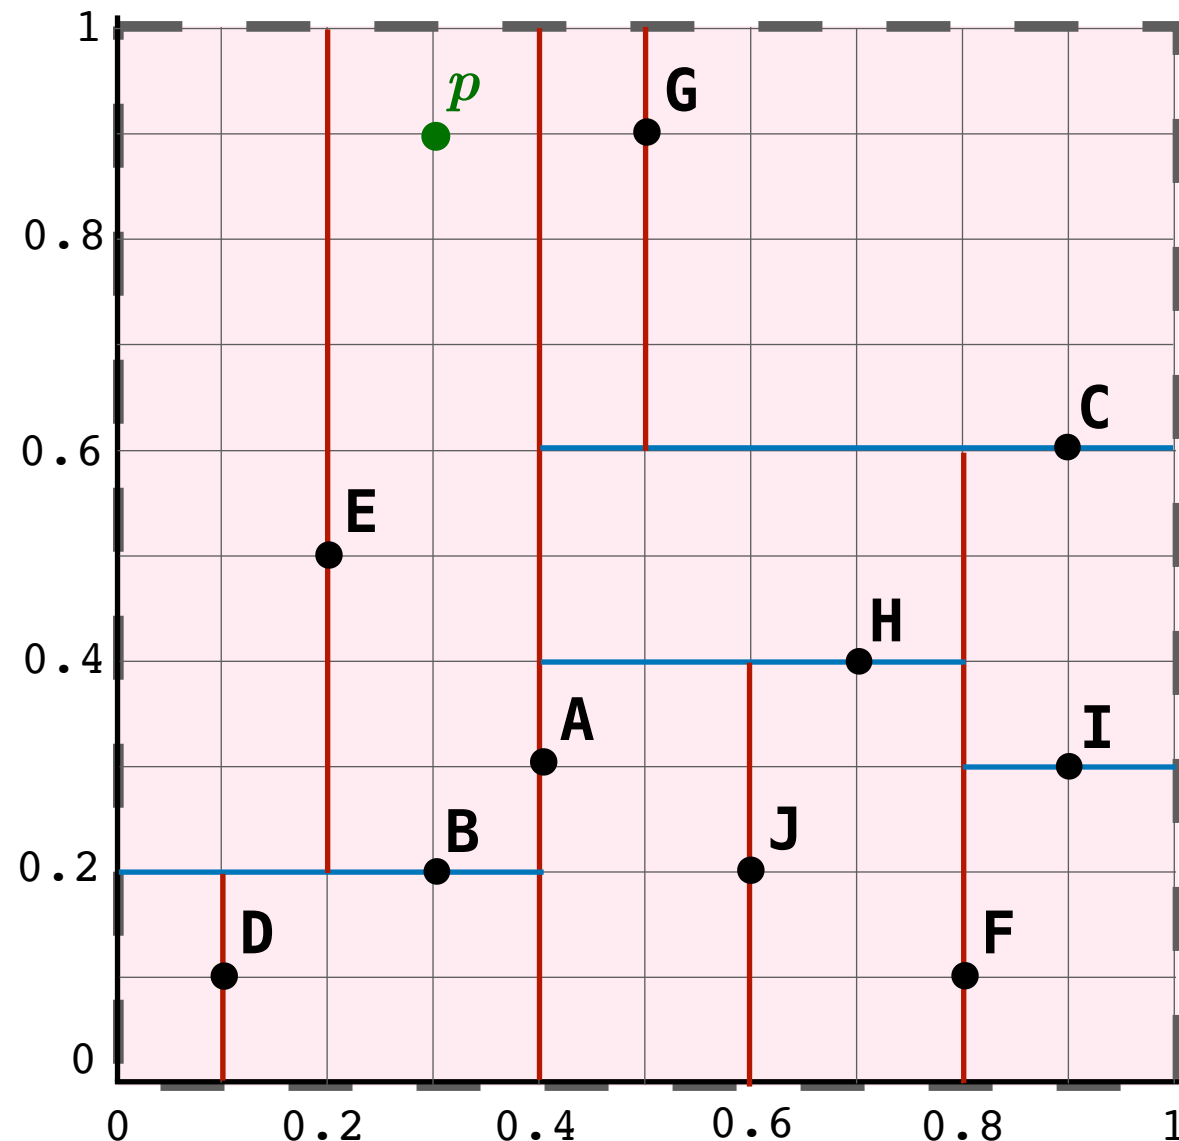

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

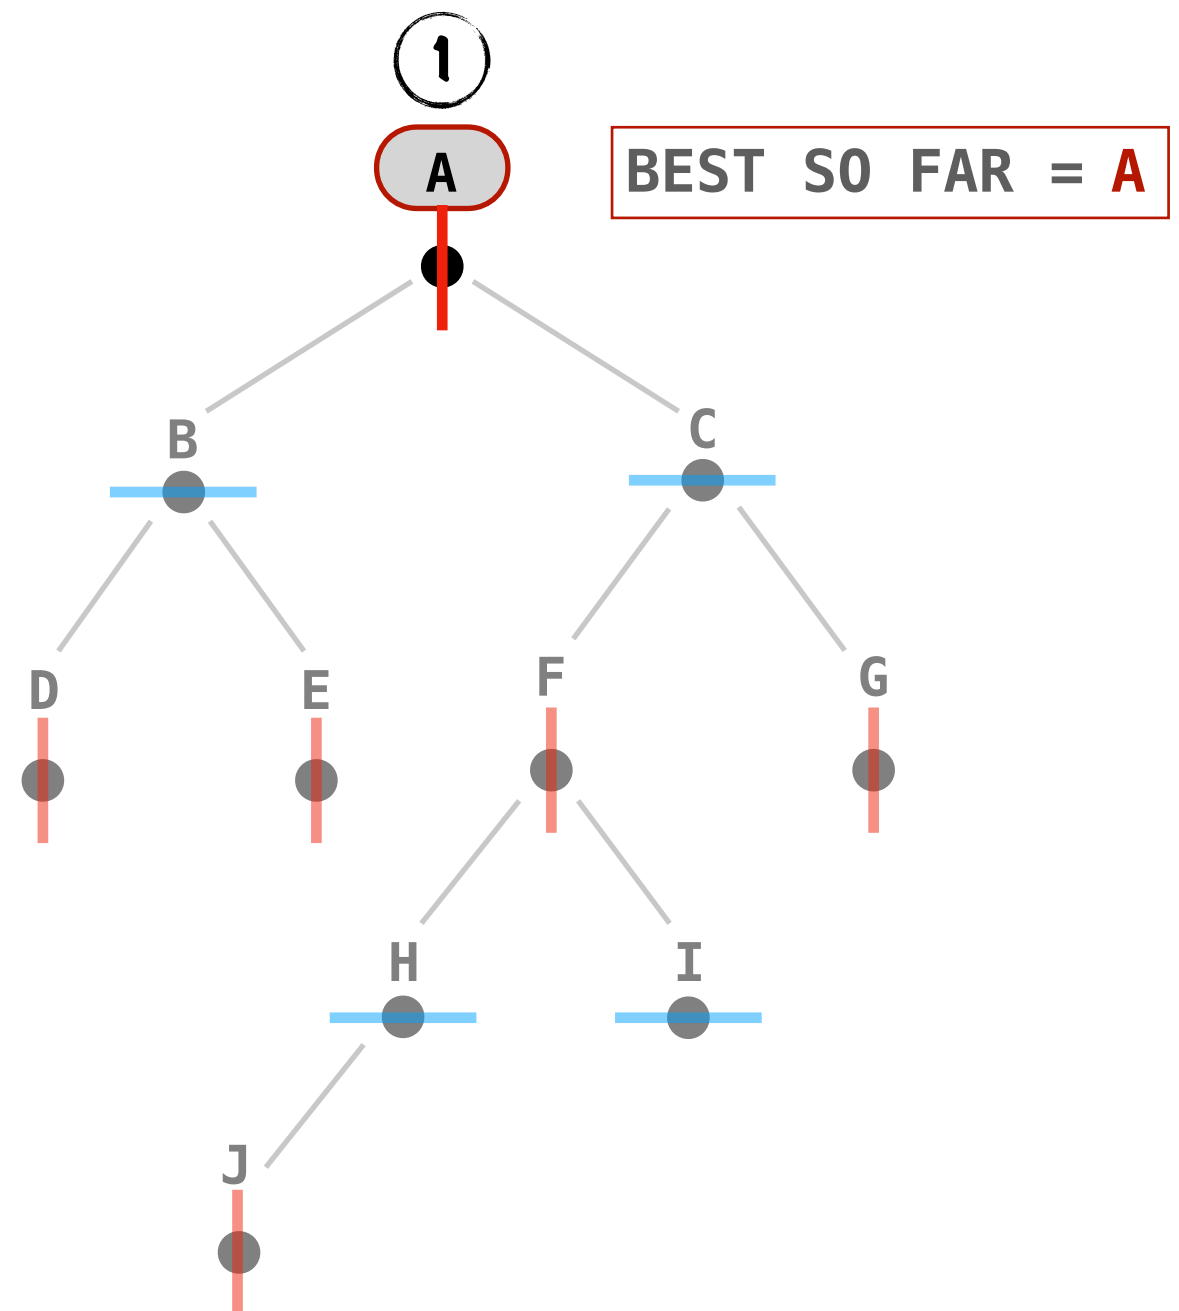

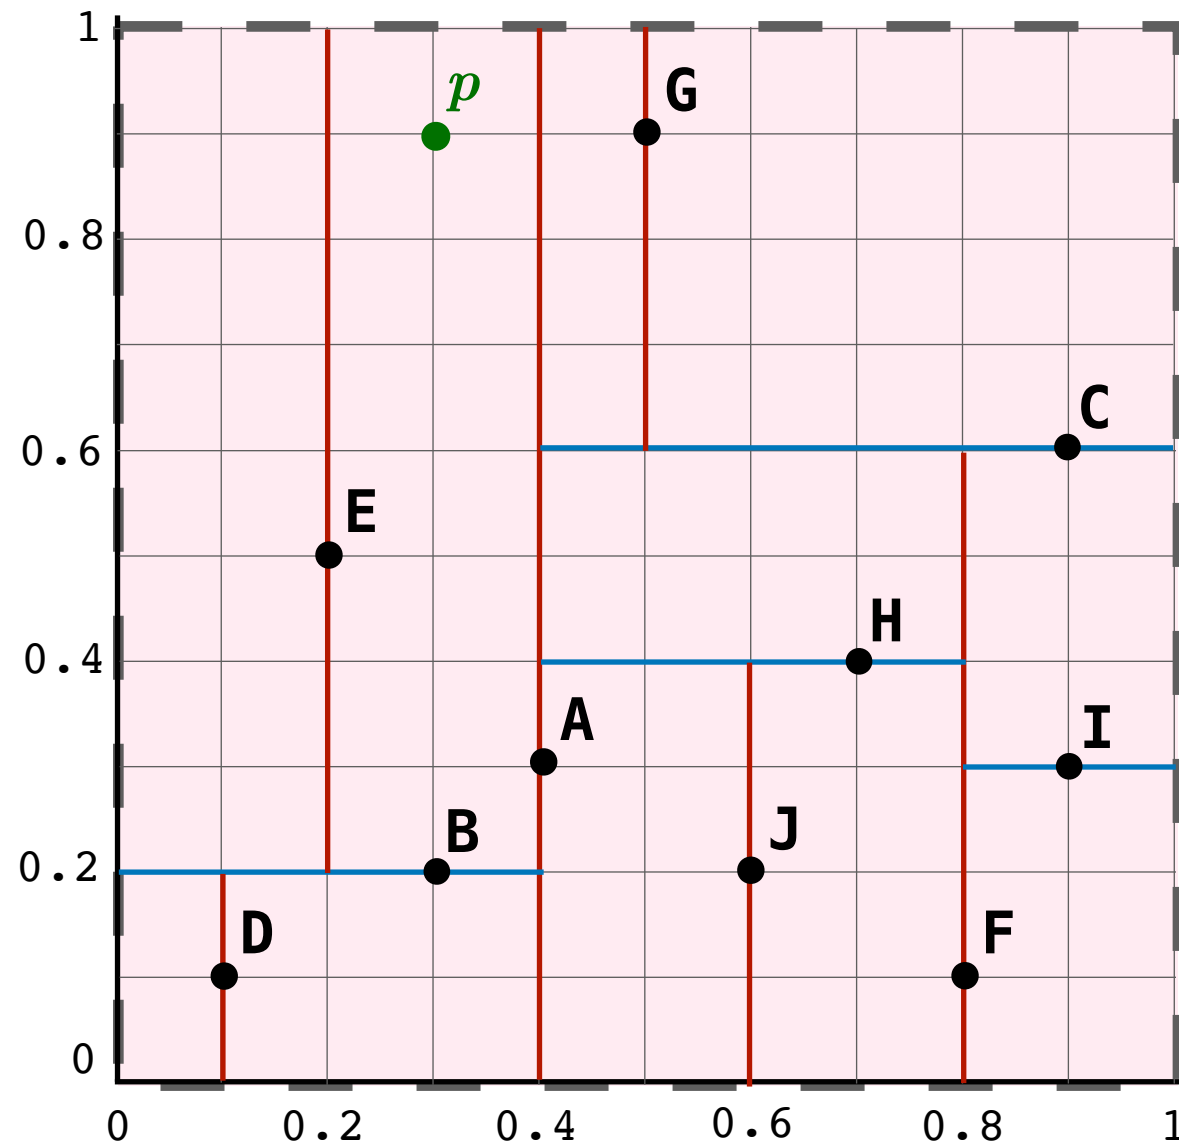

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

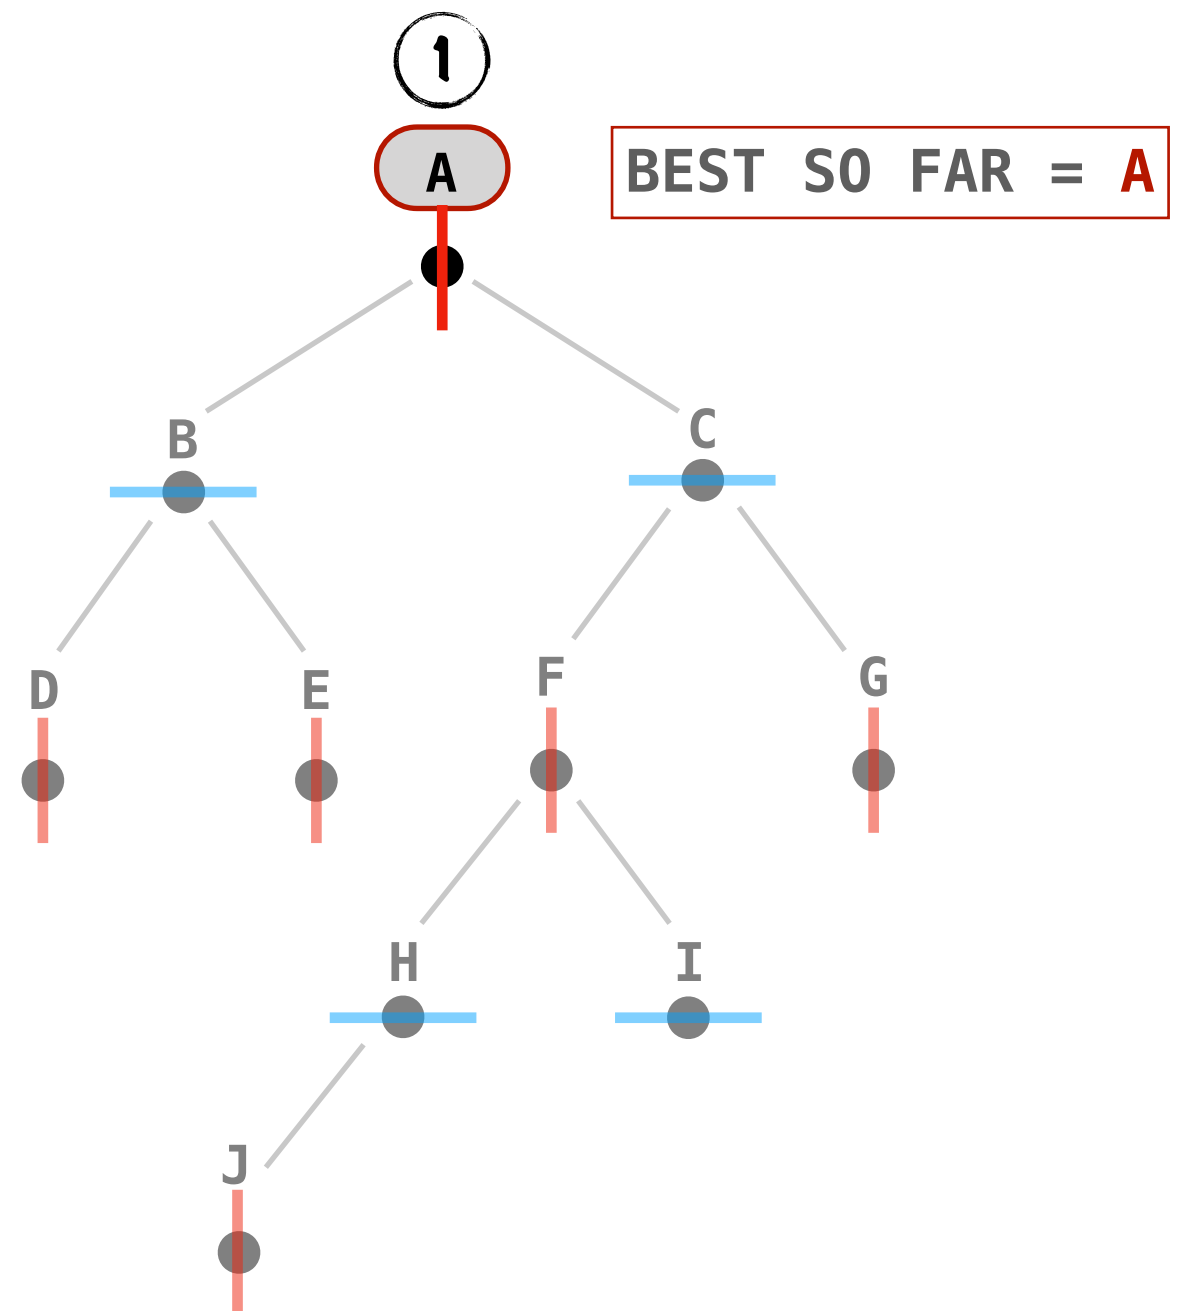

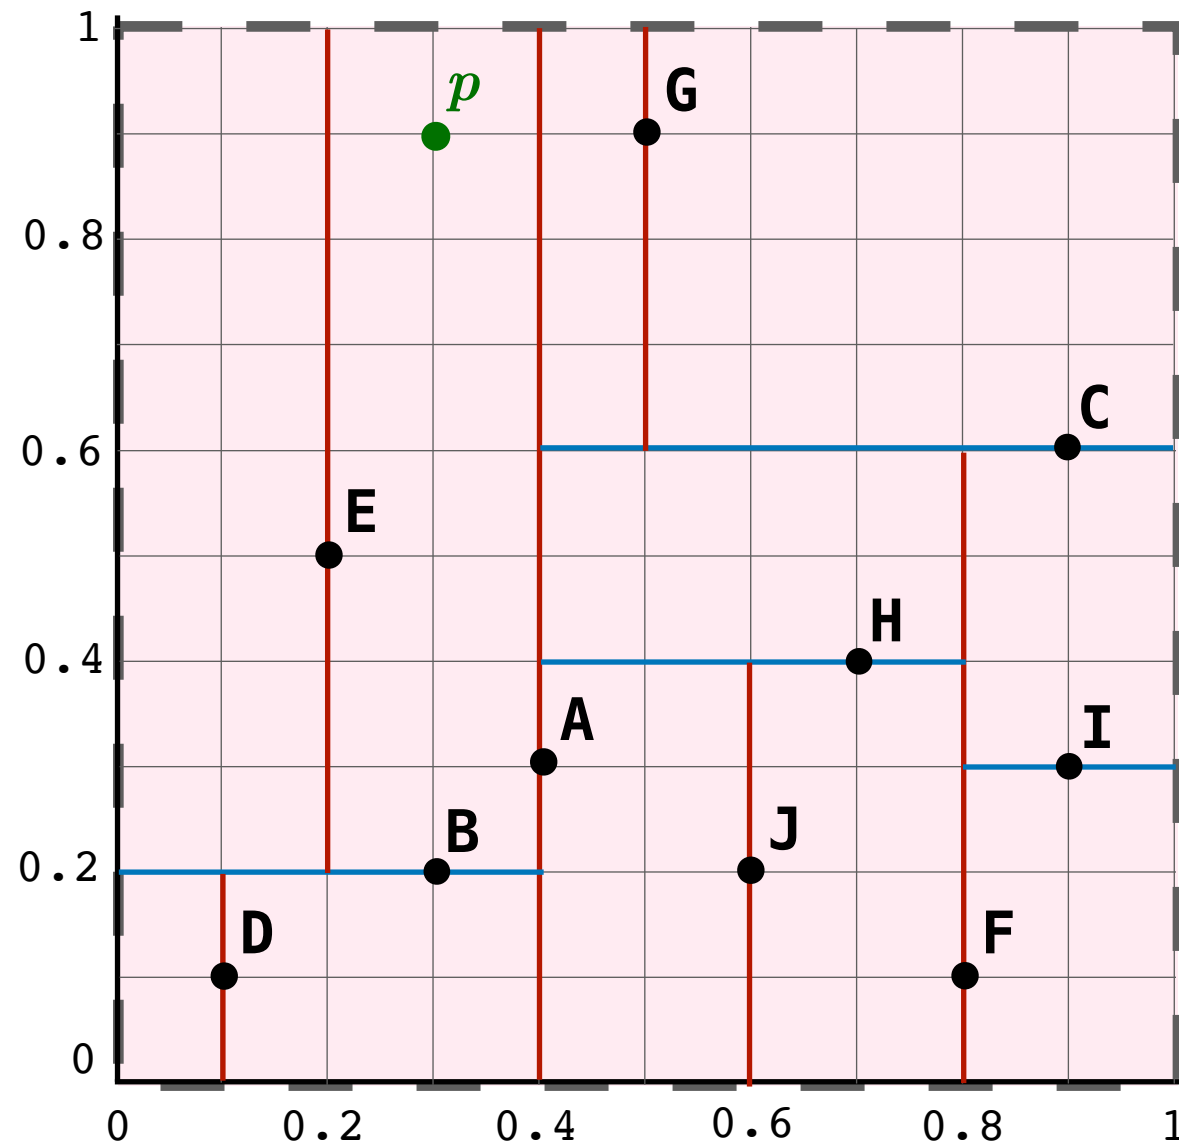

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left.**

## NN-QUERY PSEUDOCODE

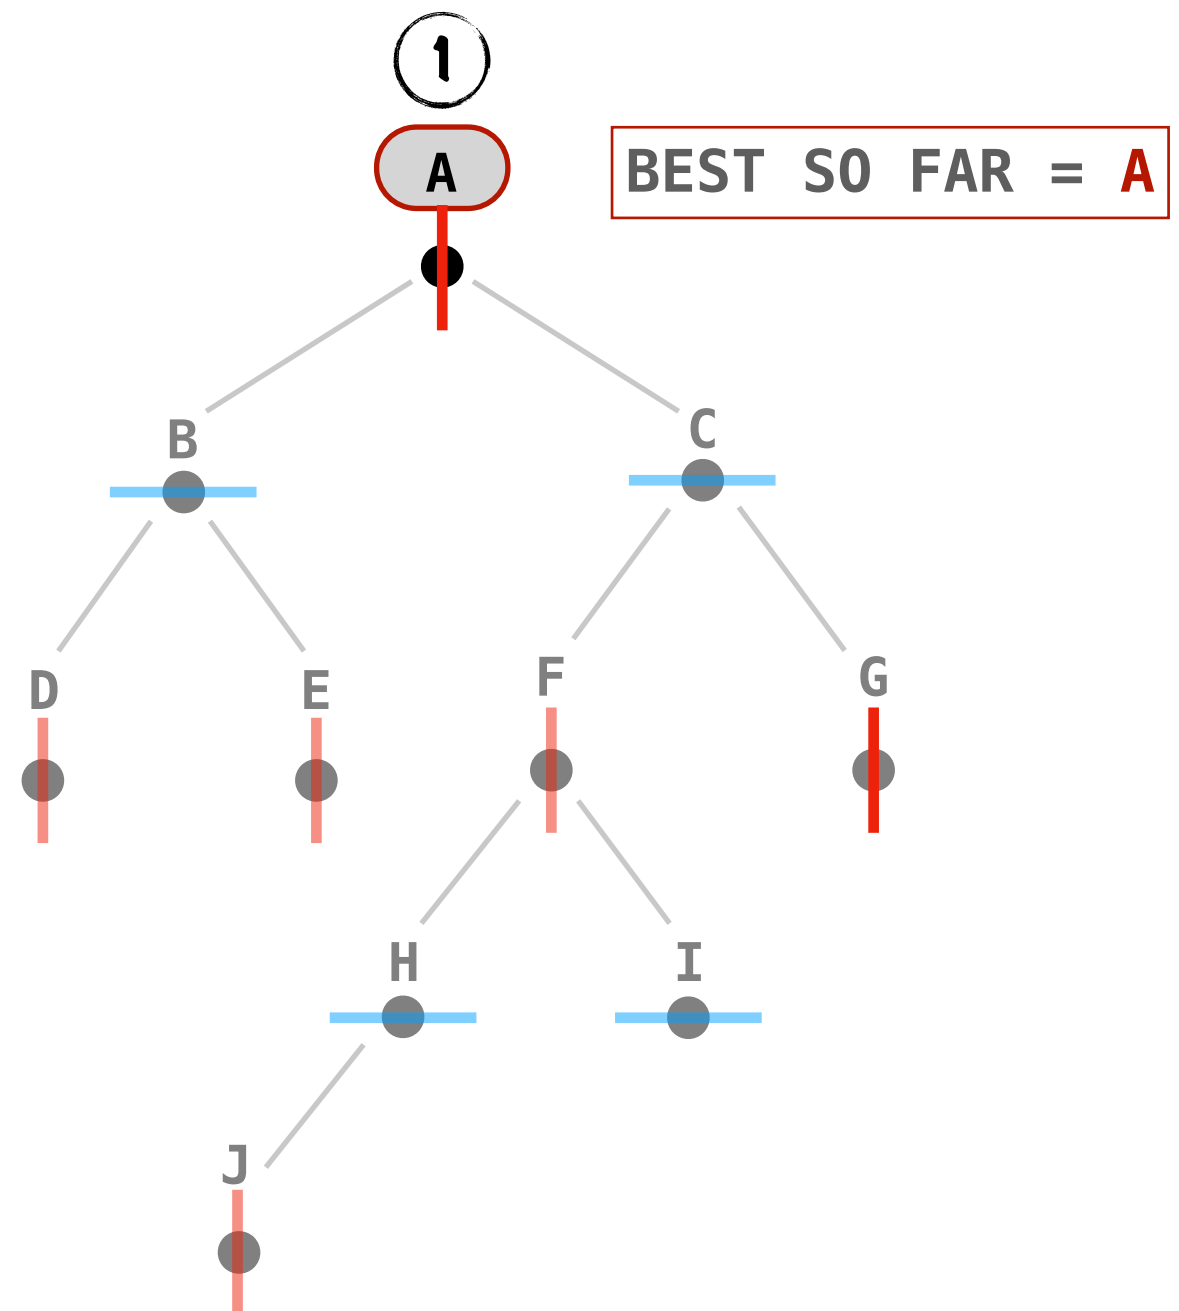

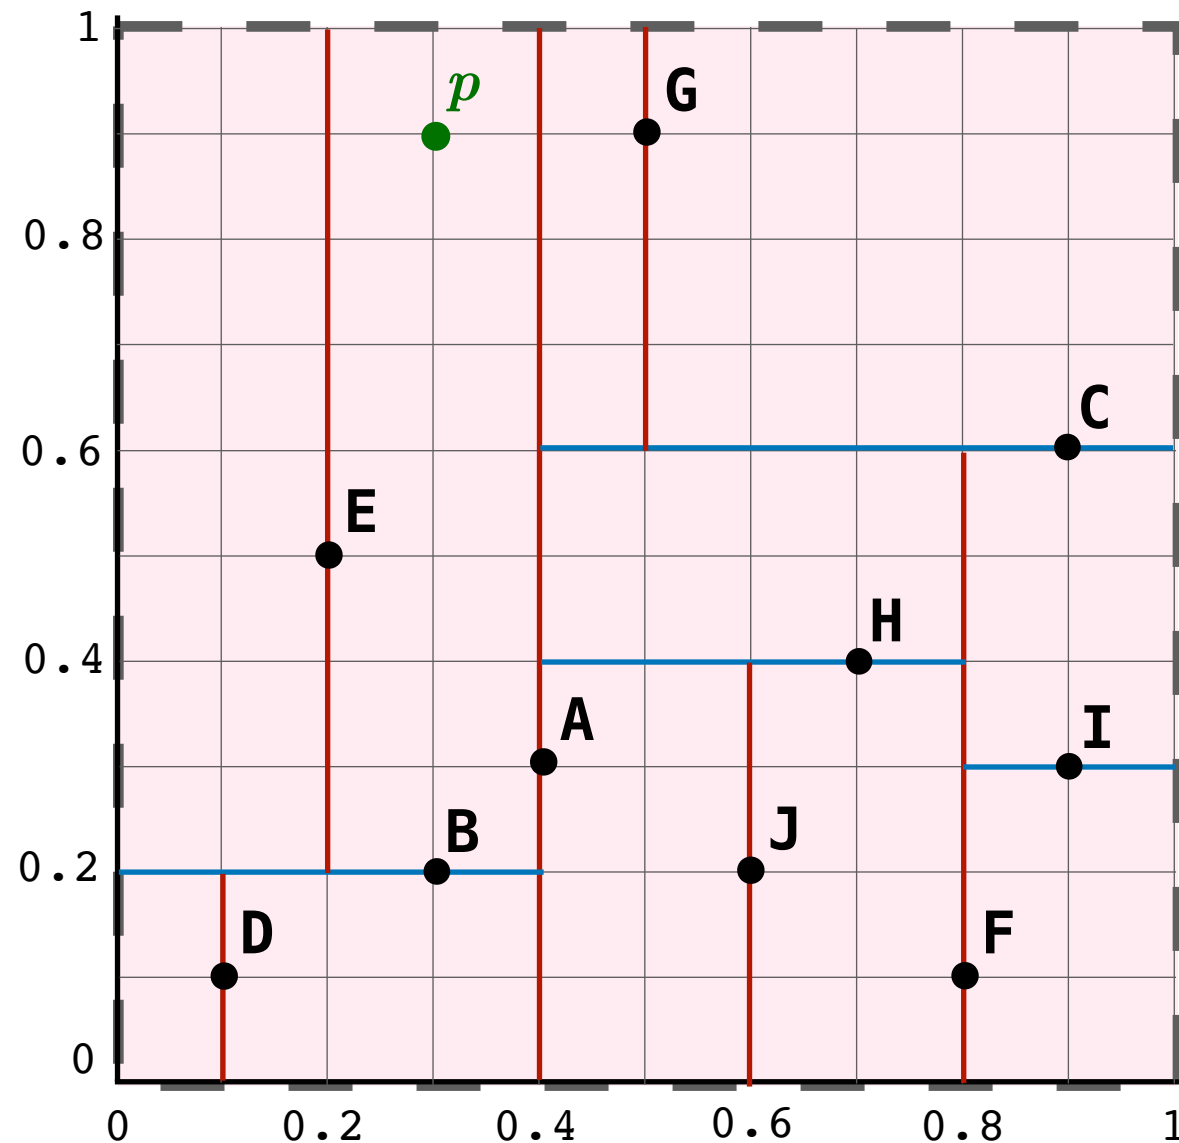

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below Go **left** then right

Else Go right then left.

## NN-QUERY PSEUDOCODE

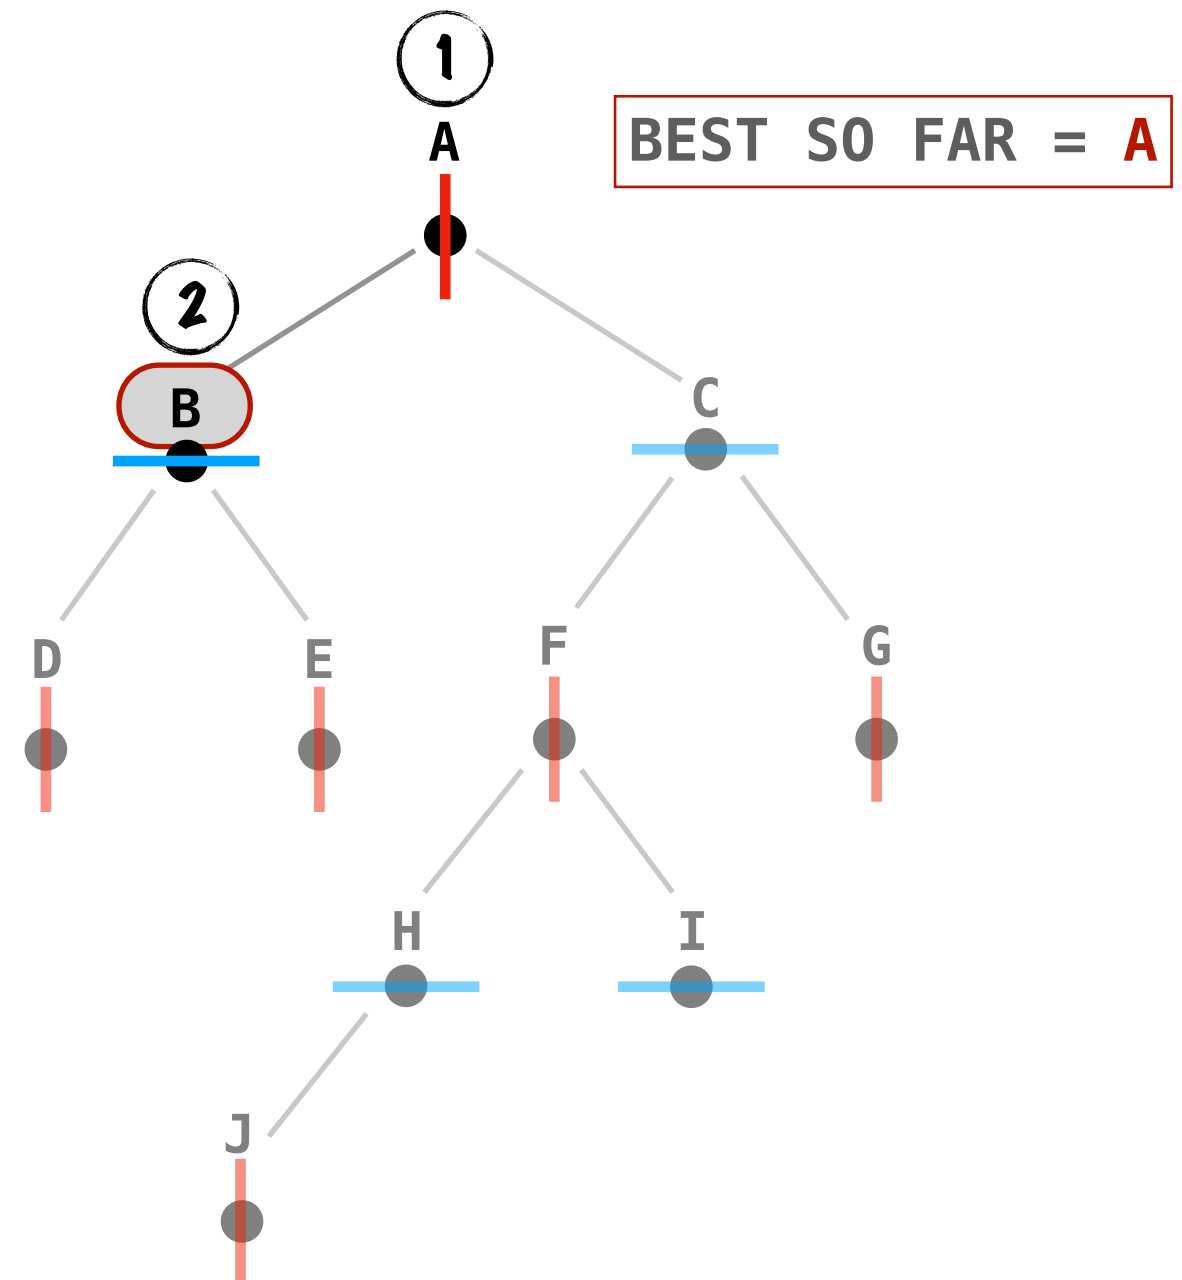

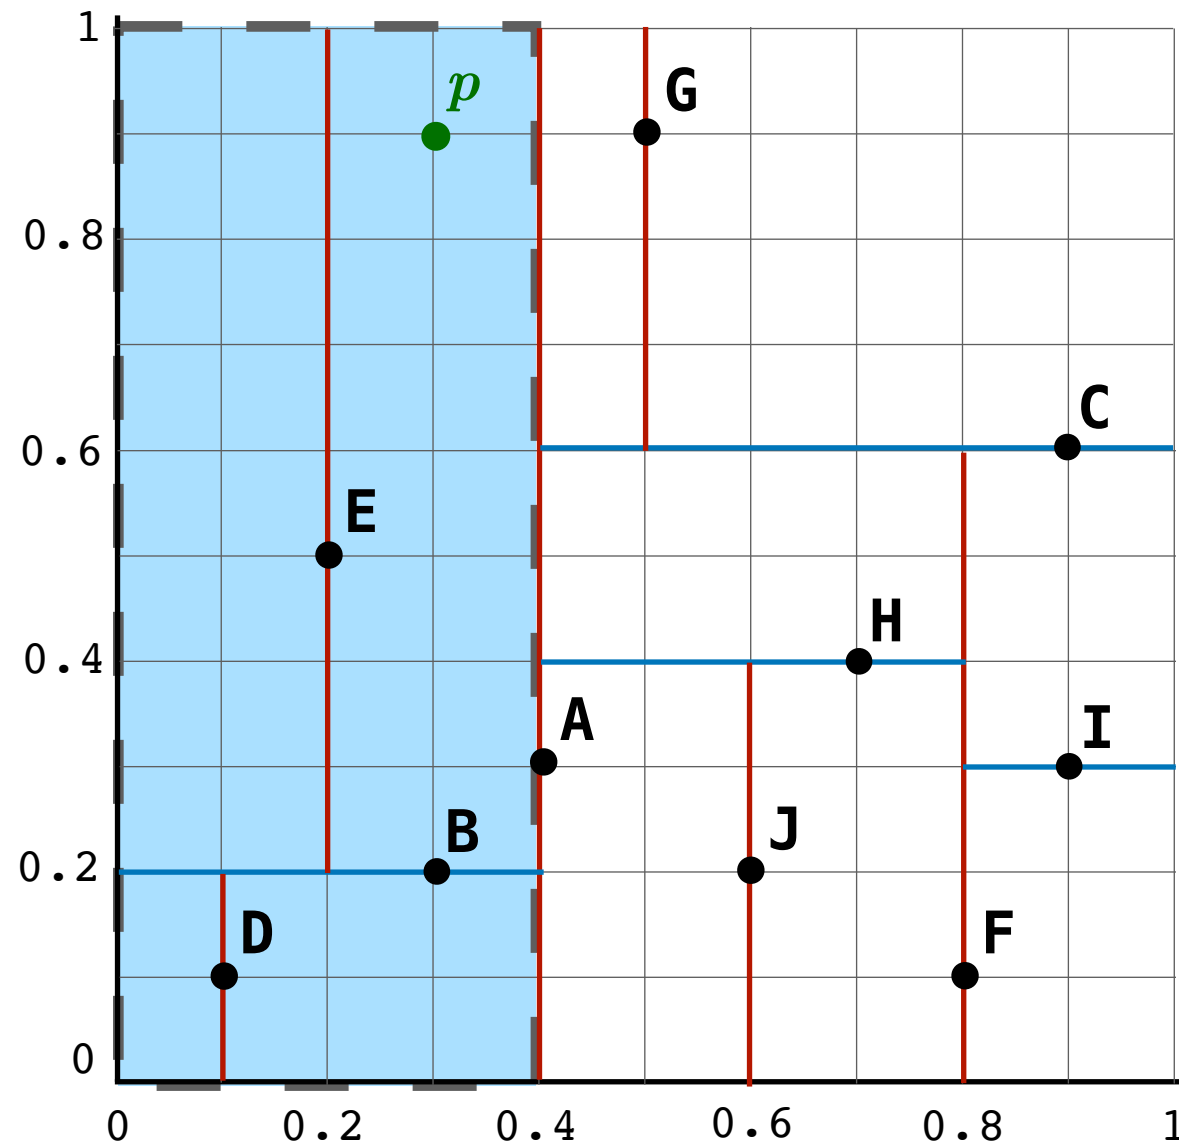

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

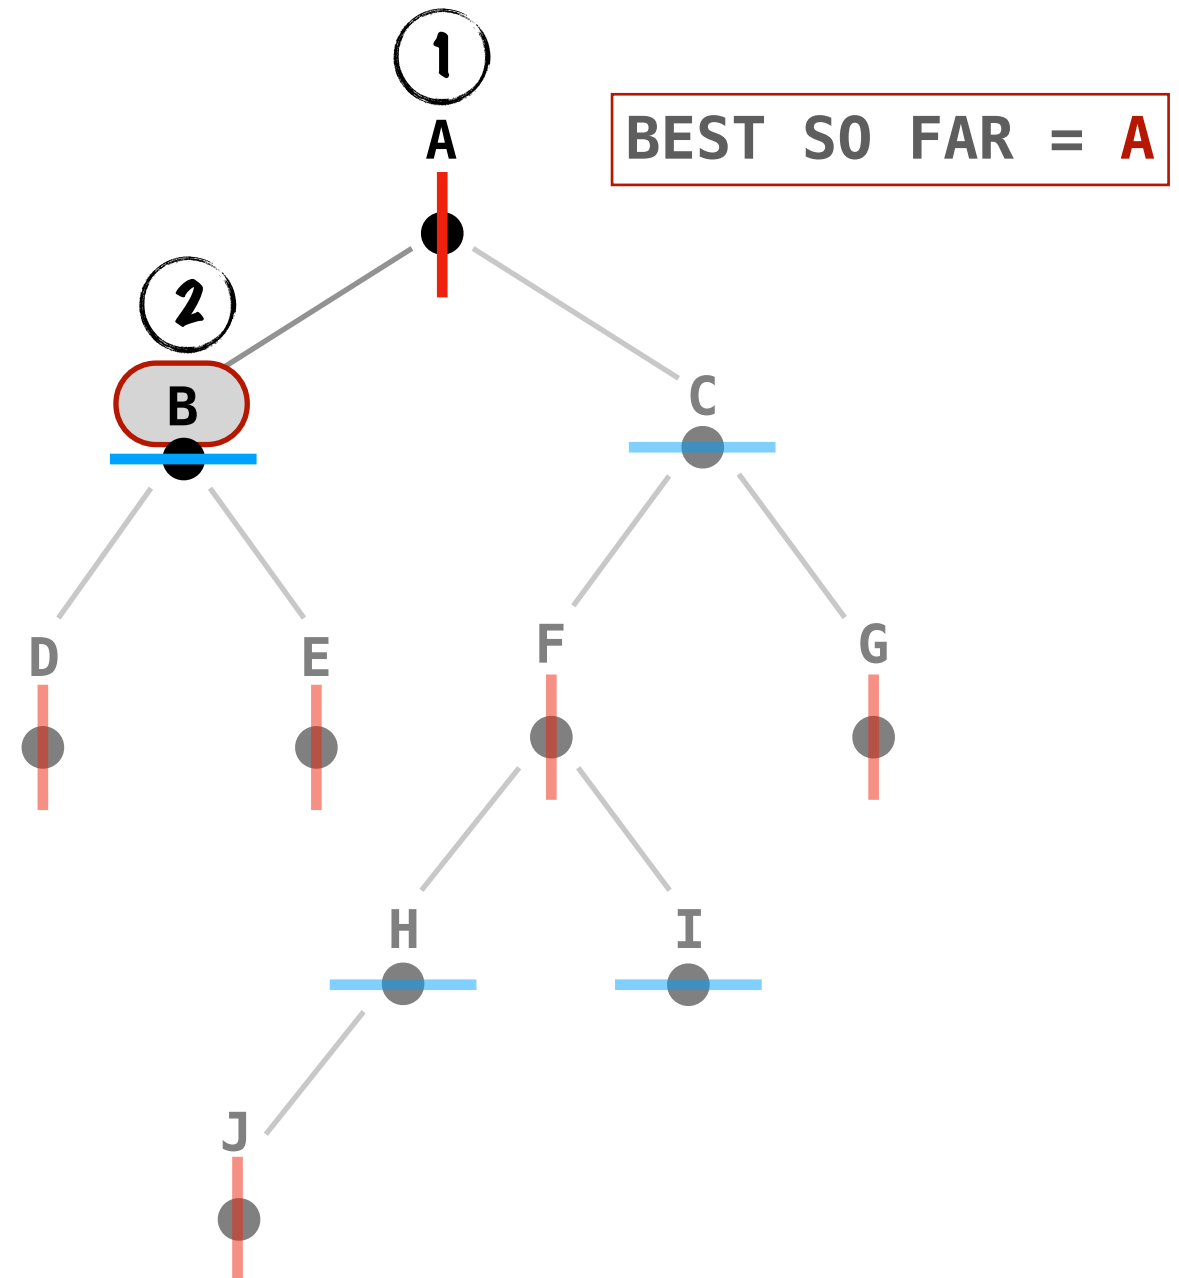

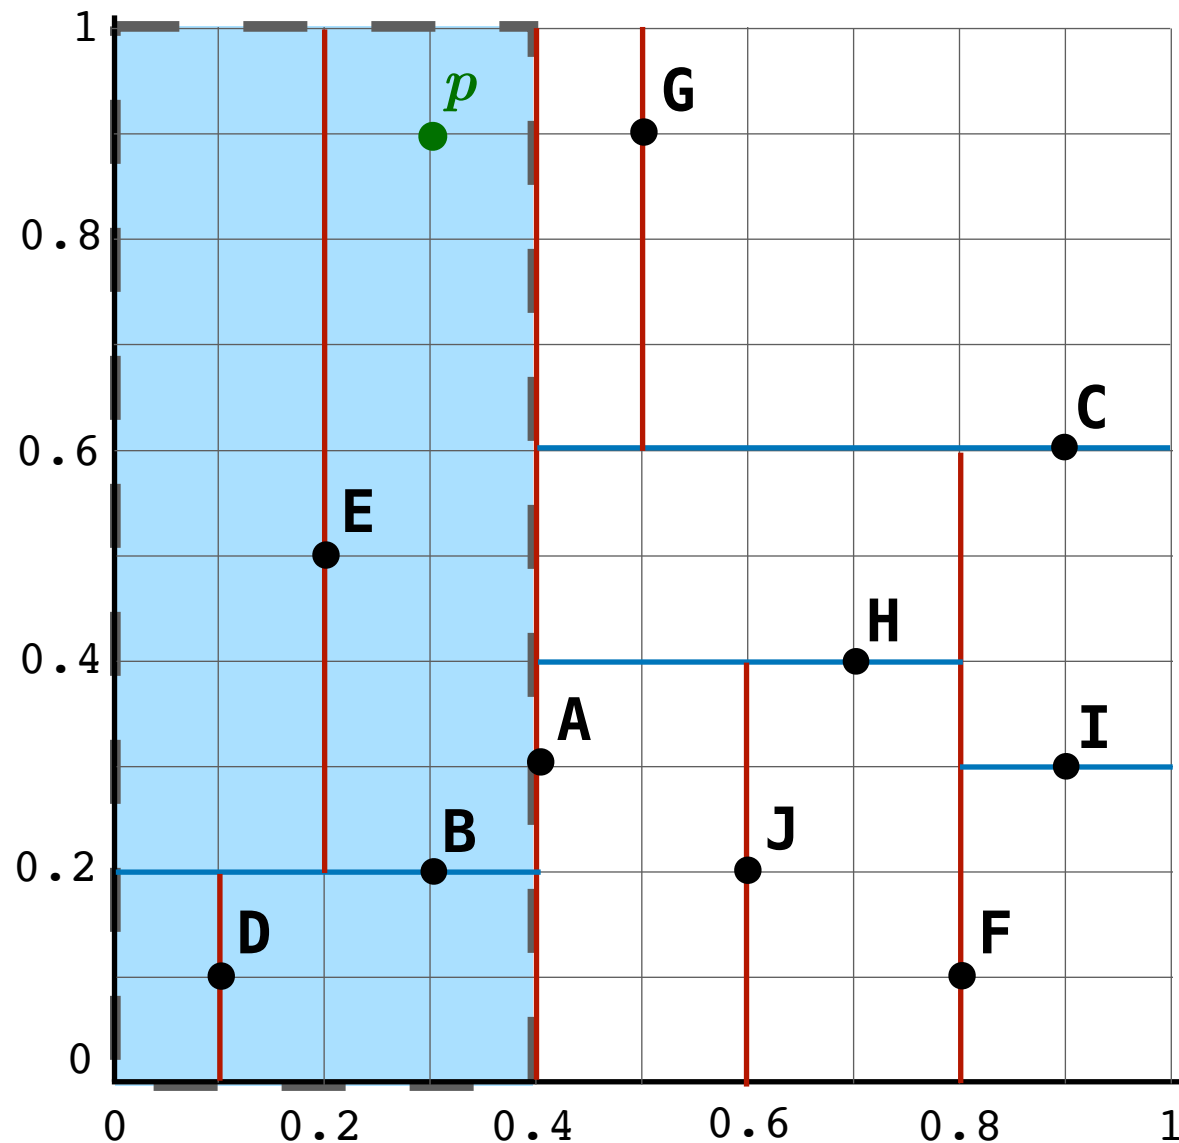

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

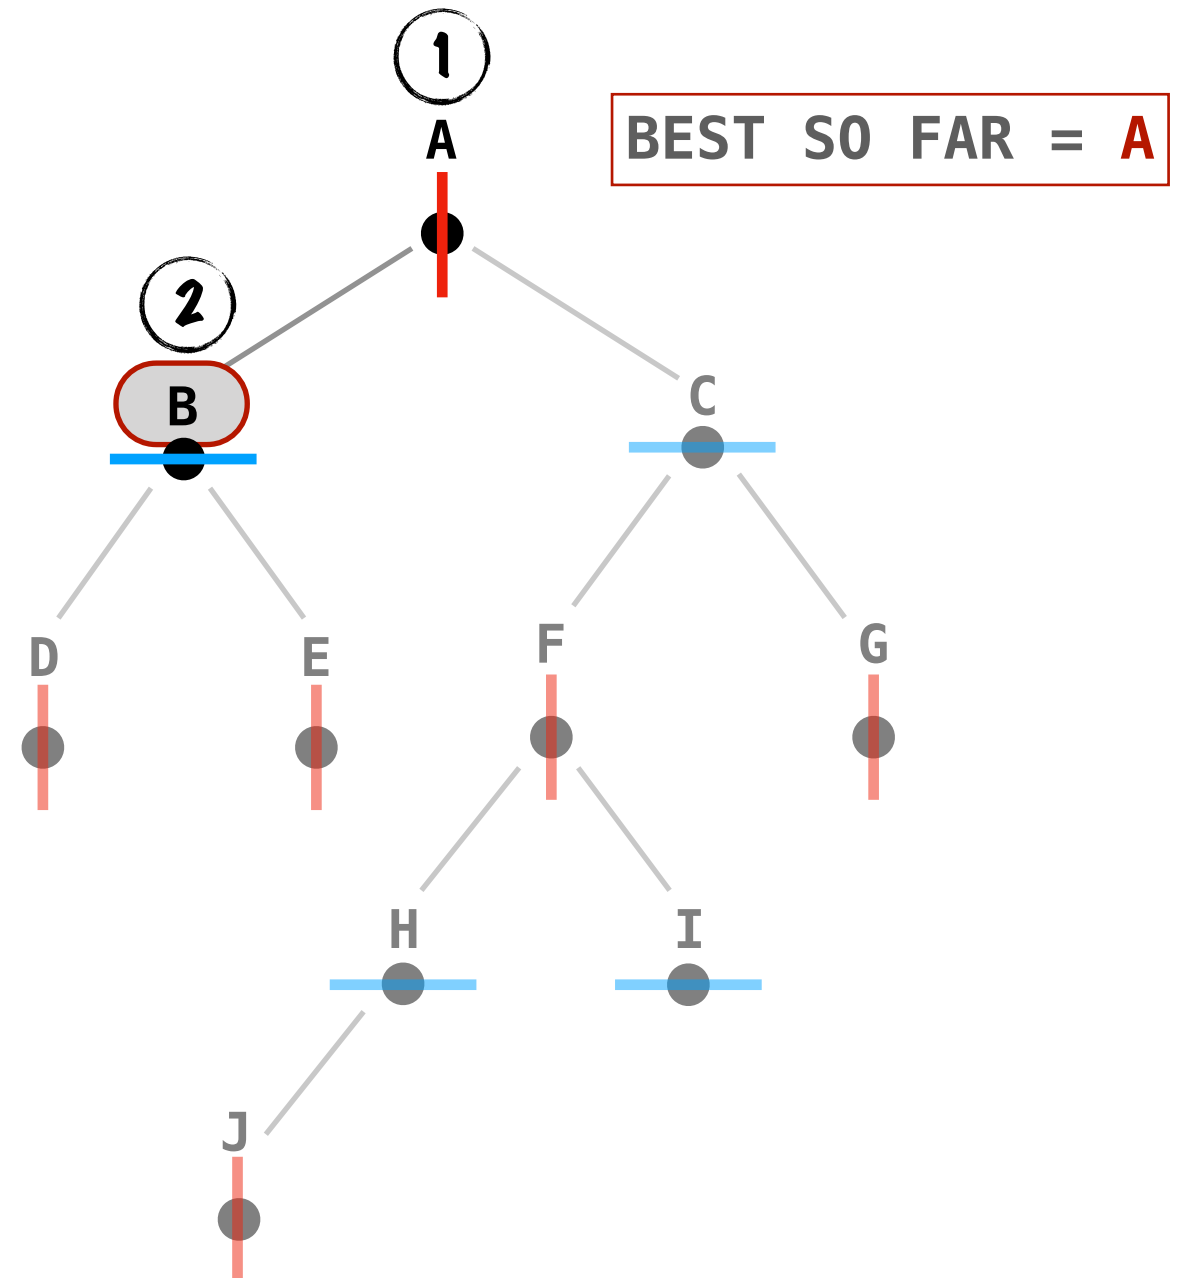

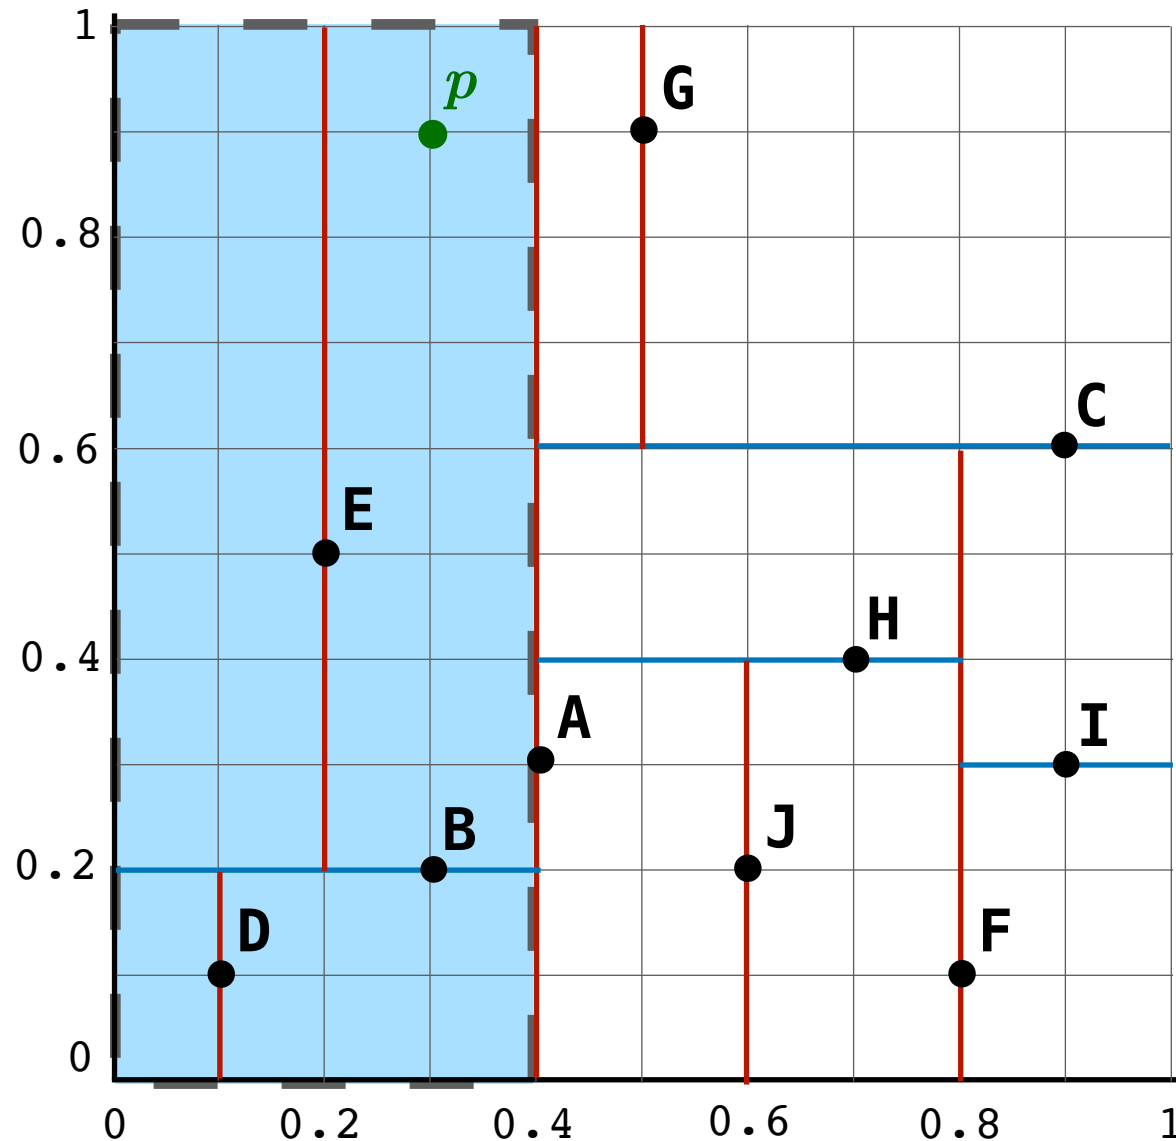

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

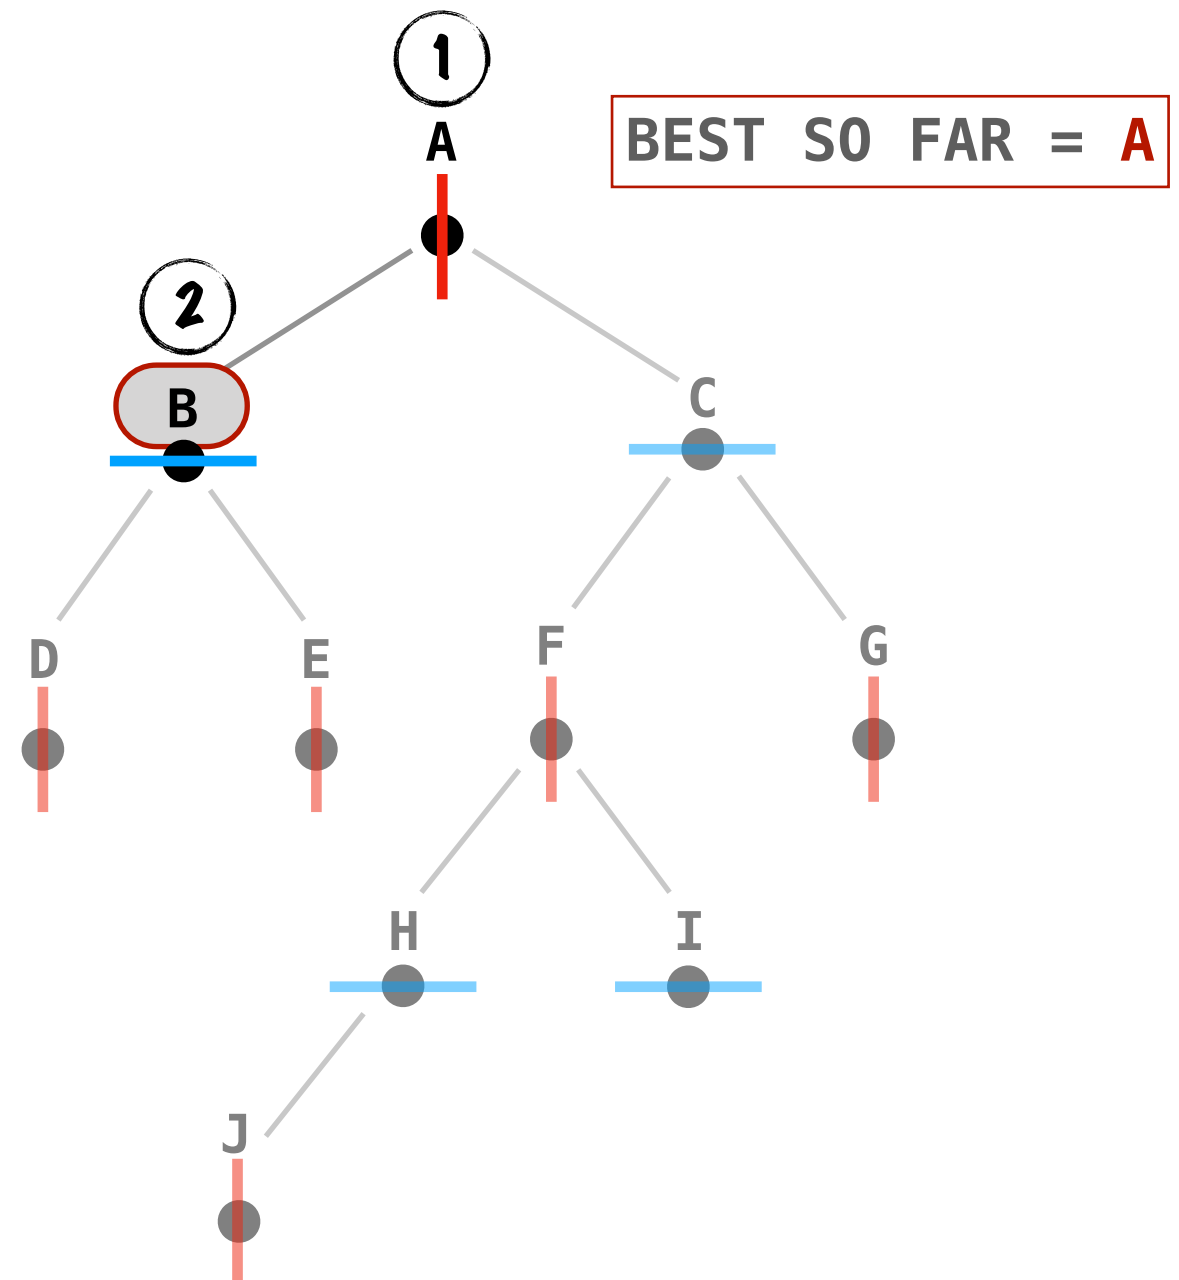

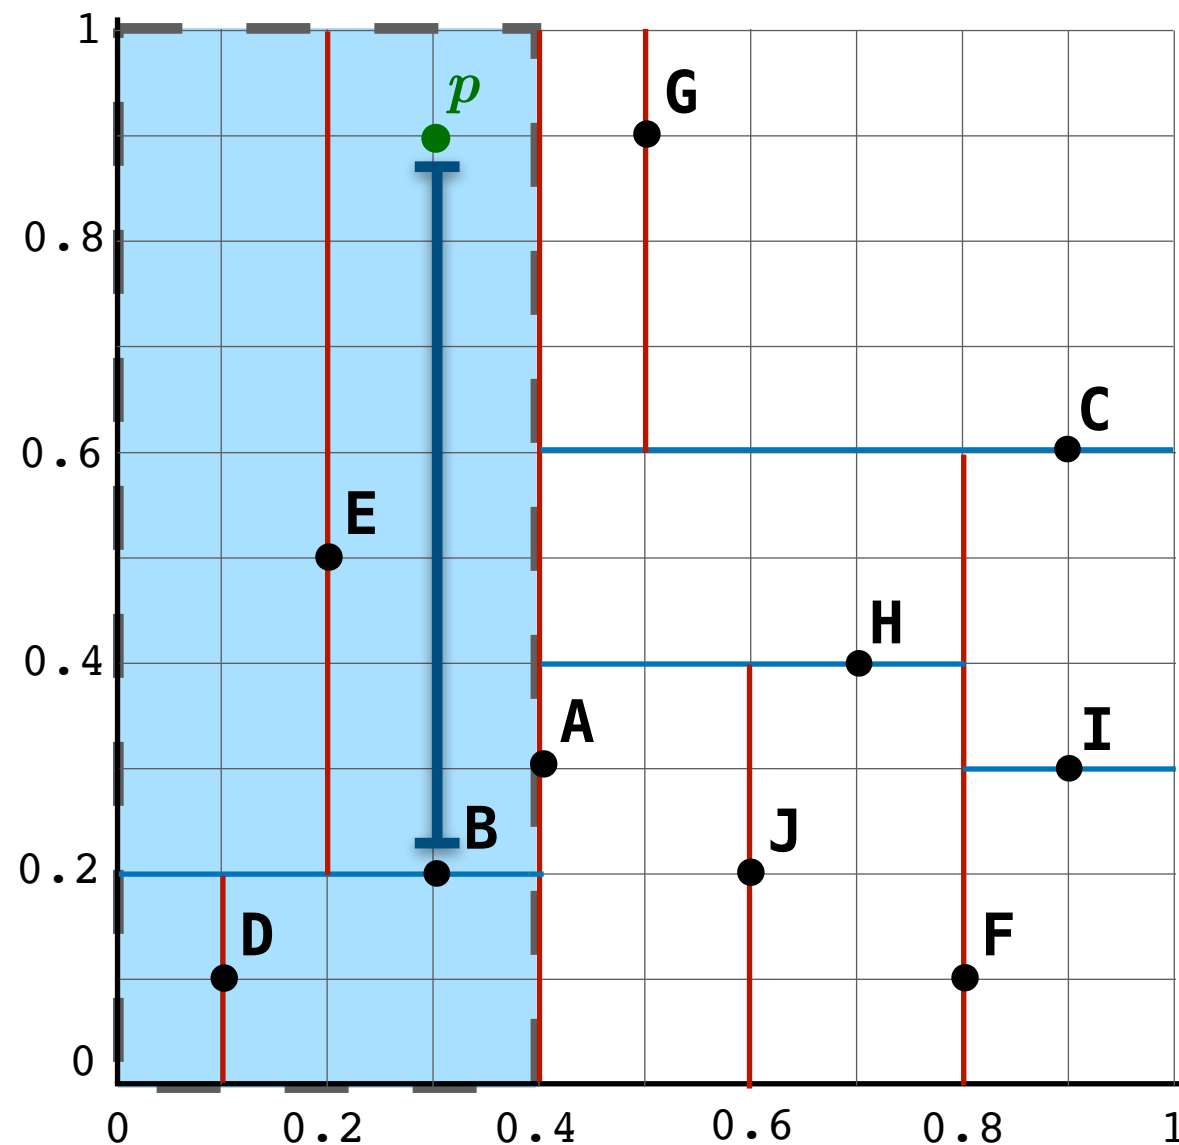

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

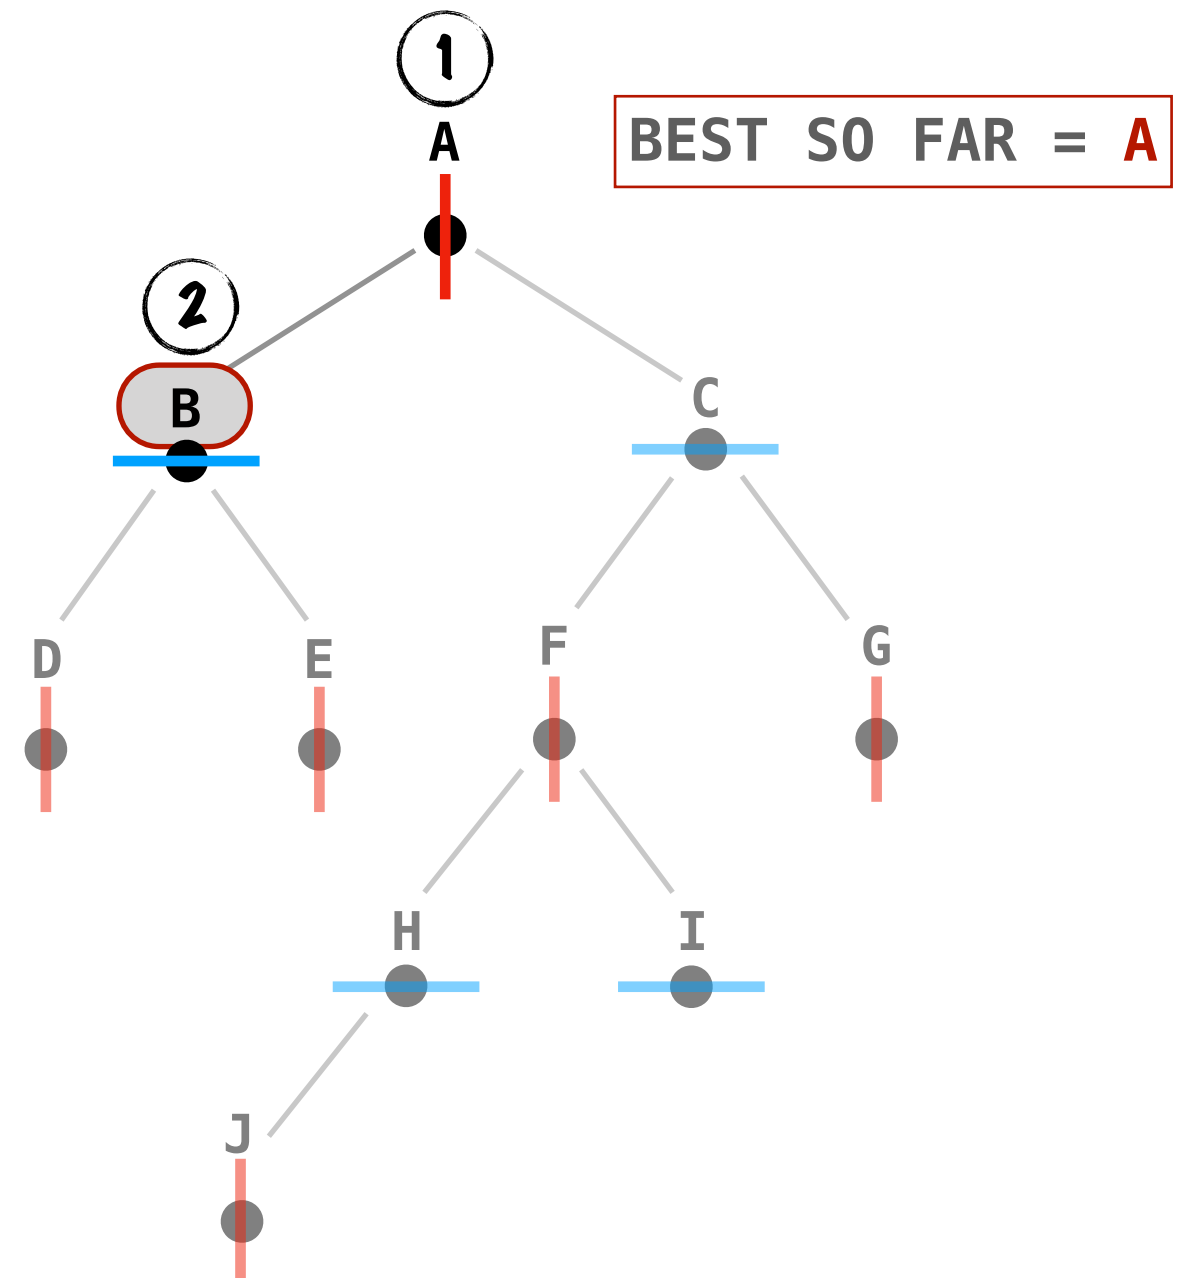

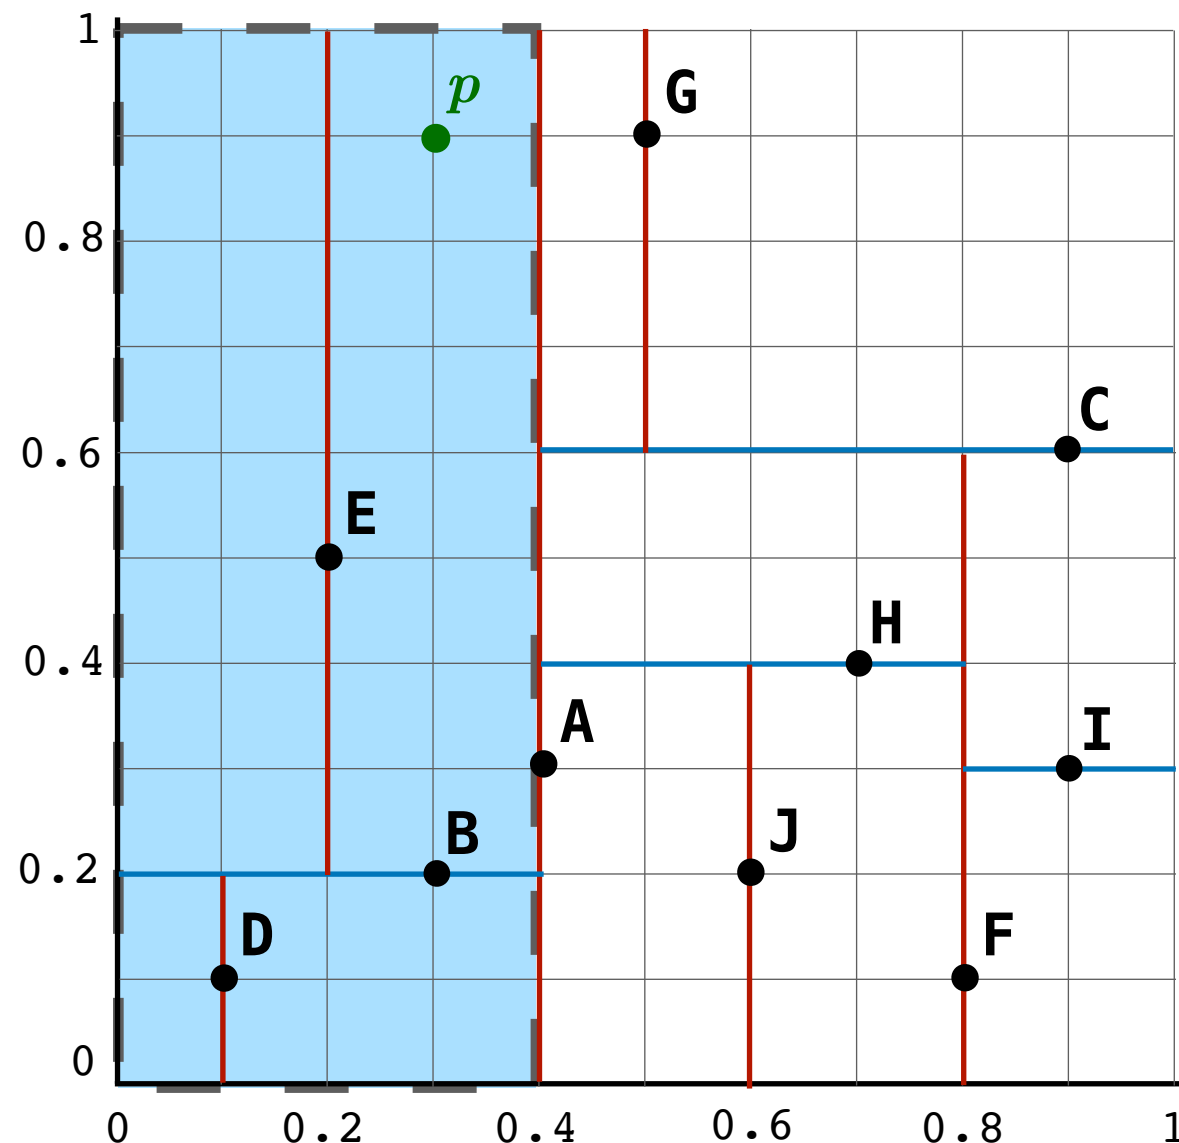

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

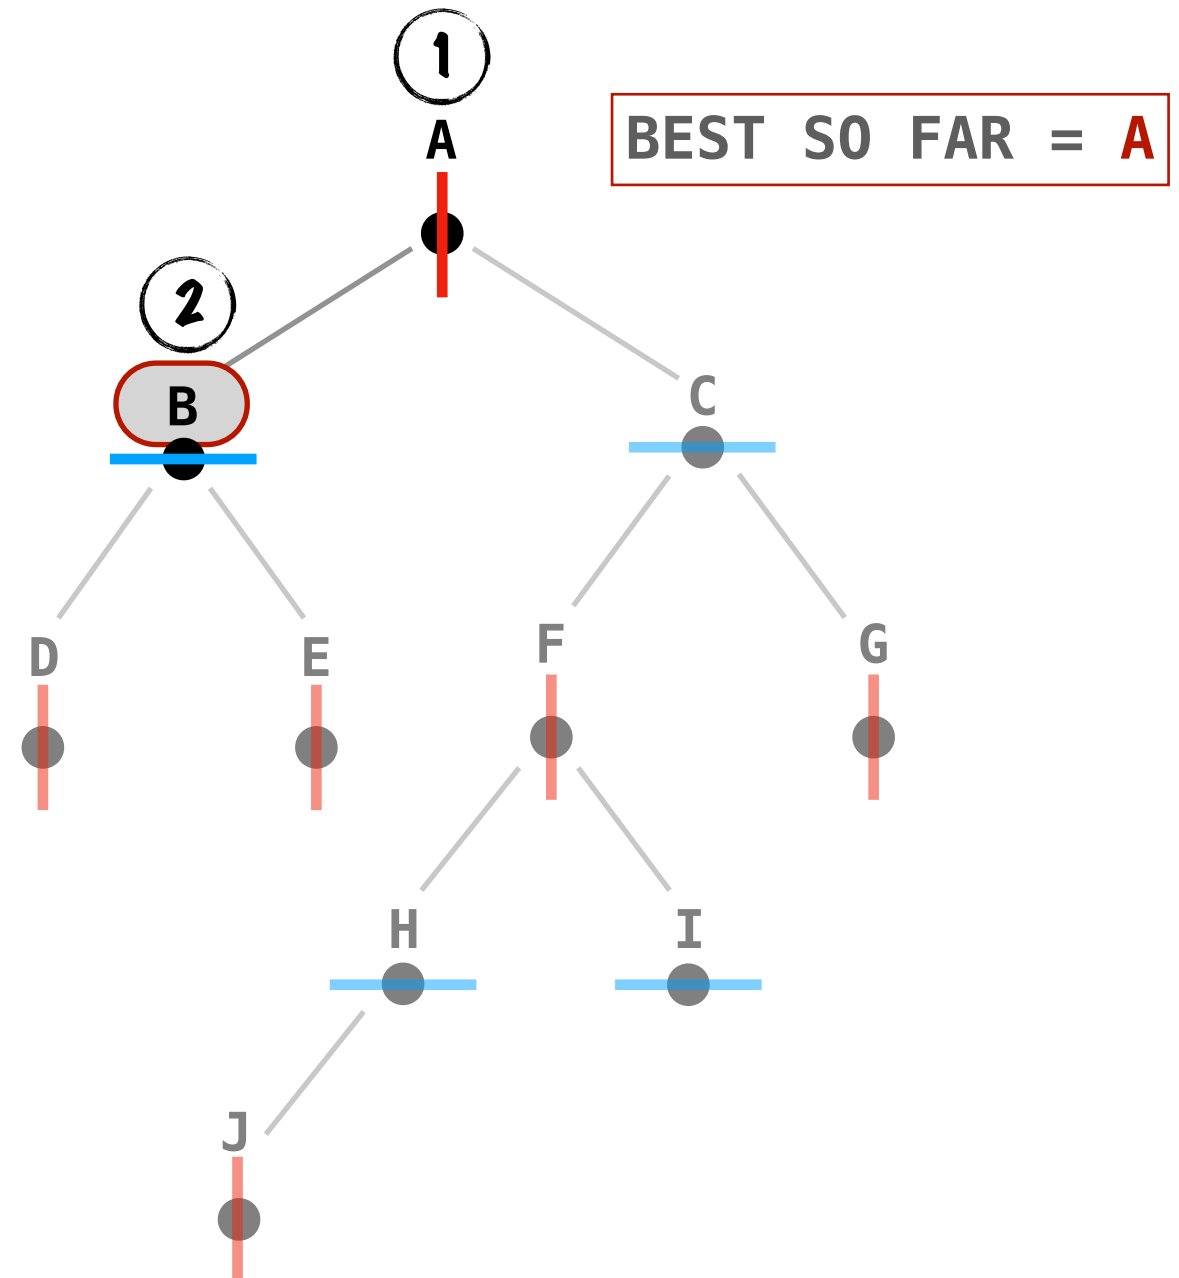

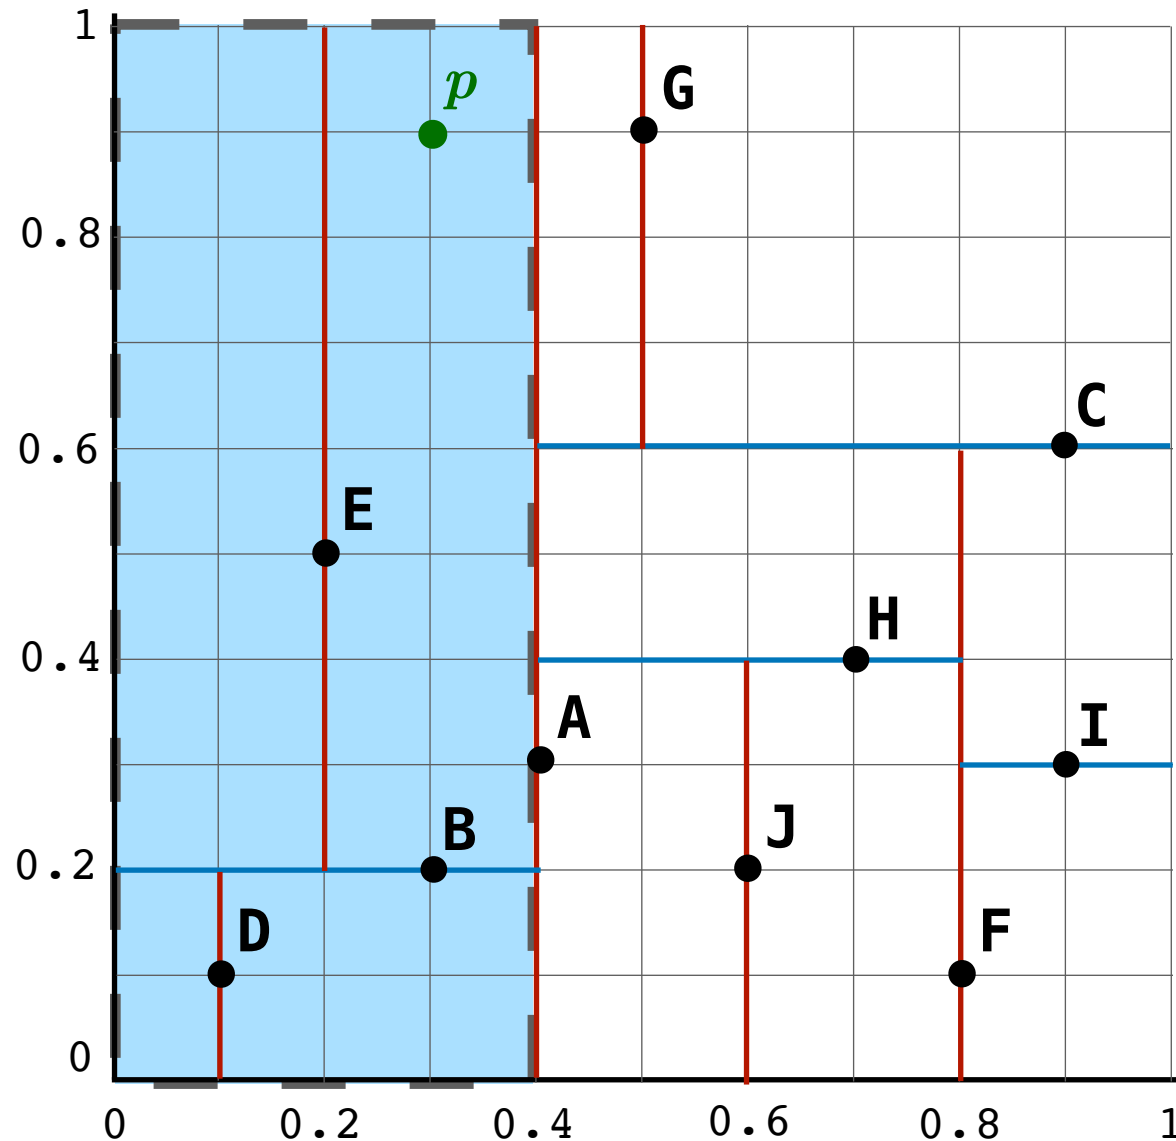

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else Go **right** then left.

## NN-QUERY PSEUDOCODE

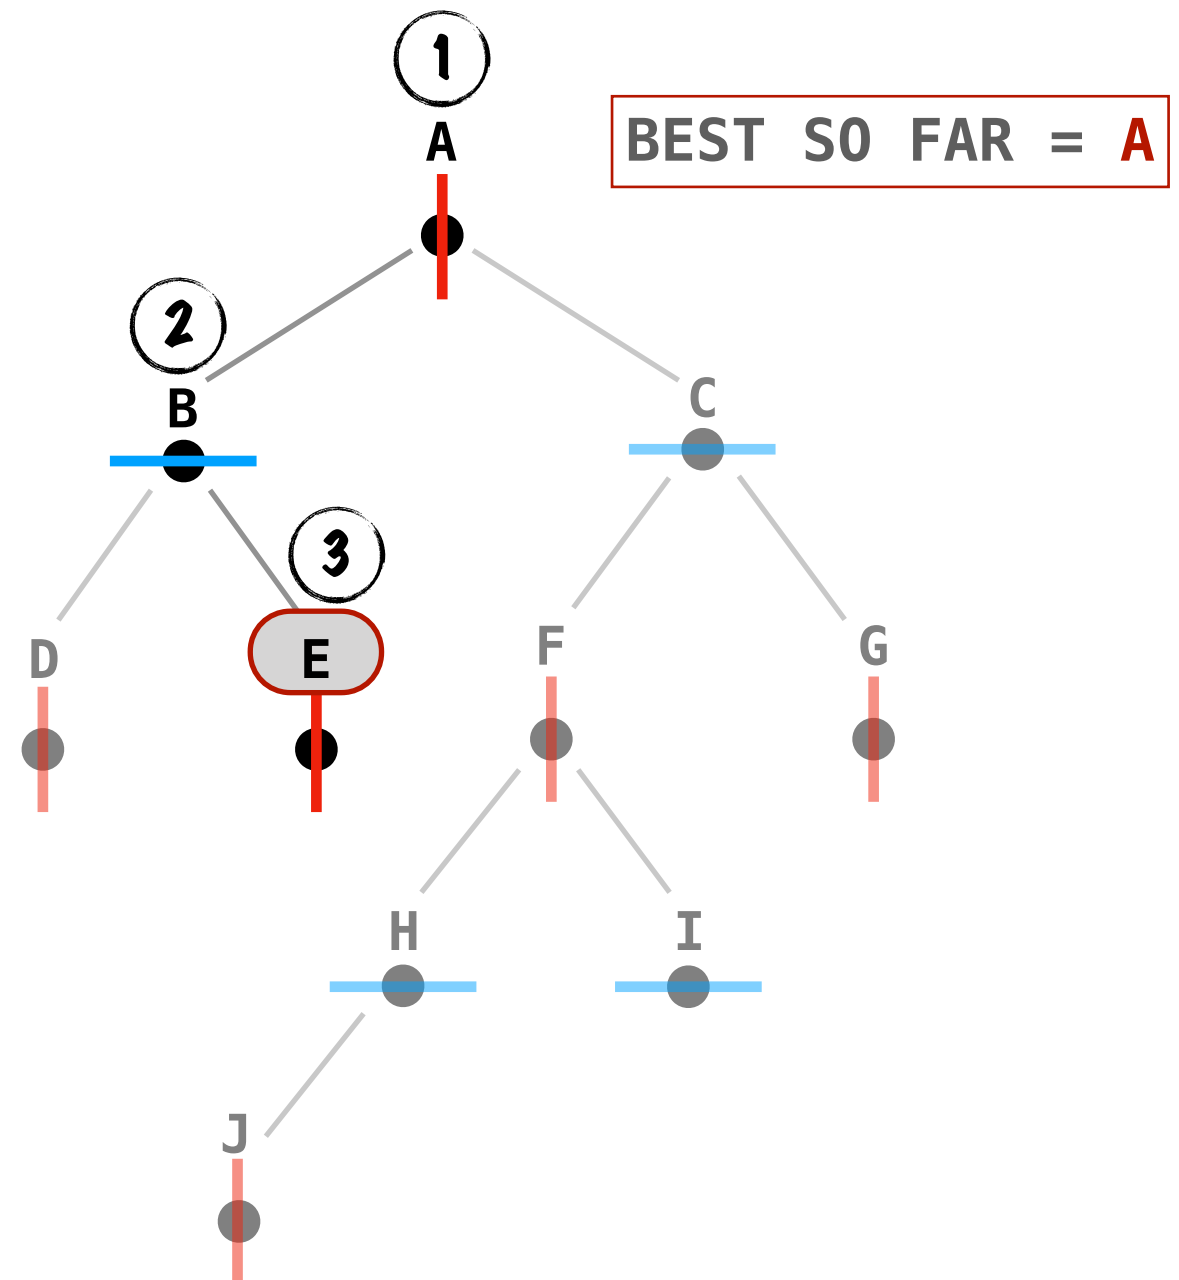

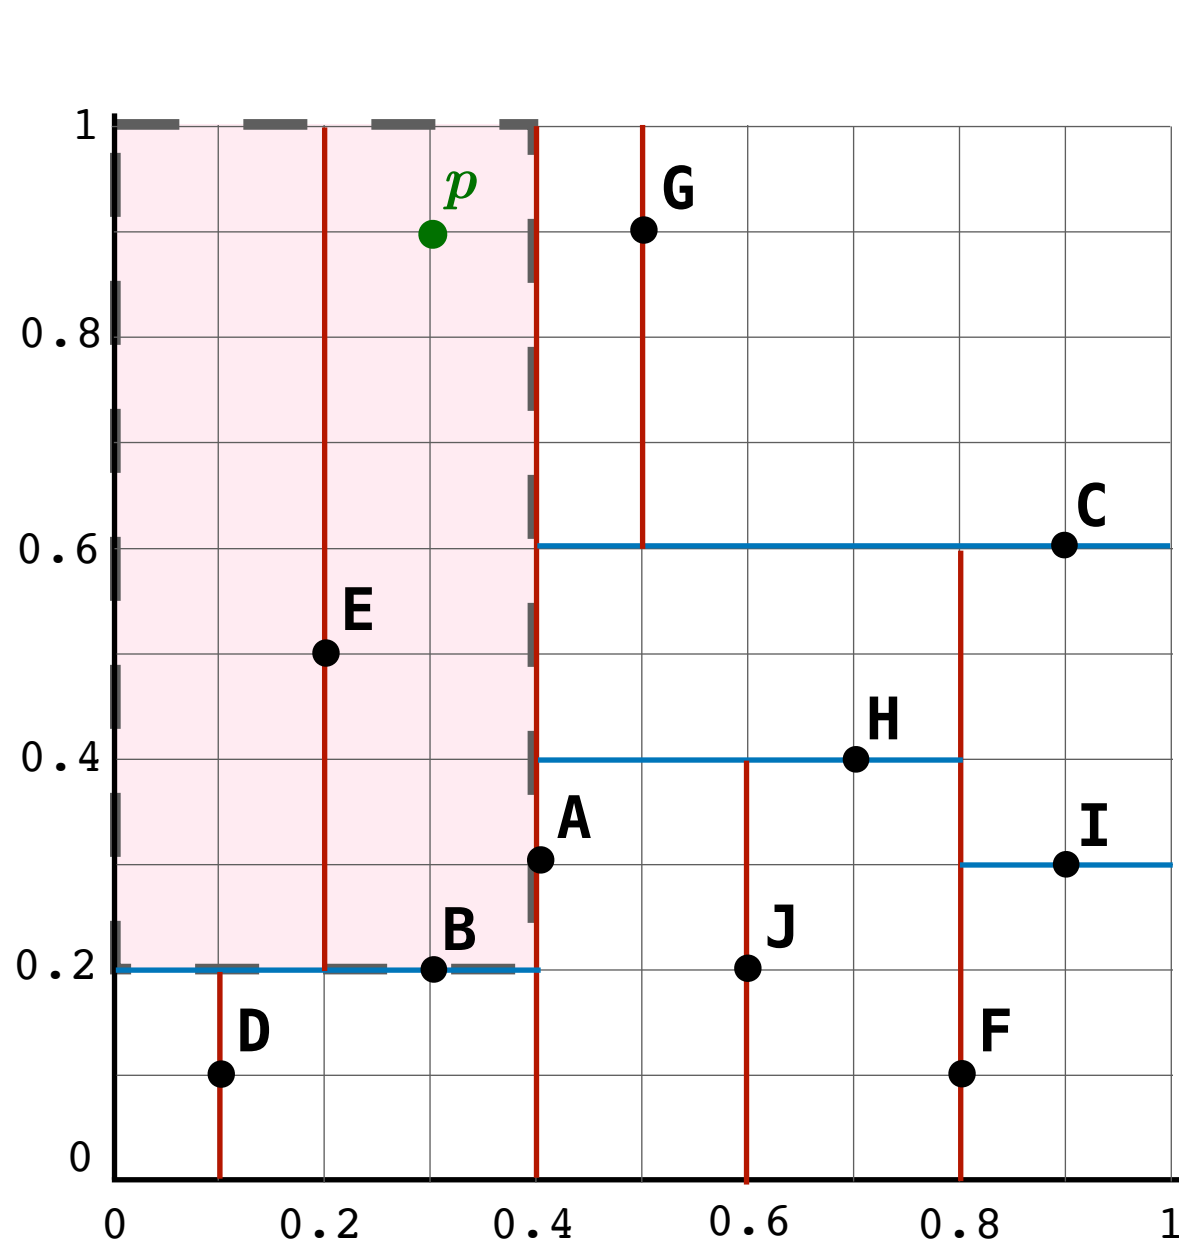

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

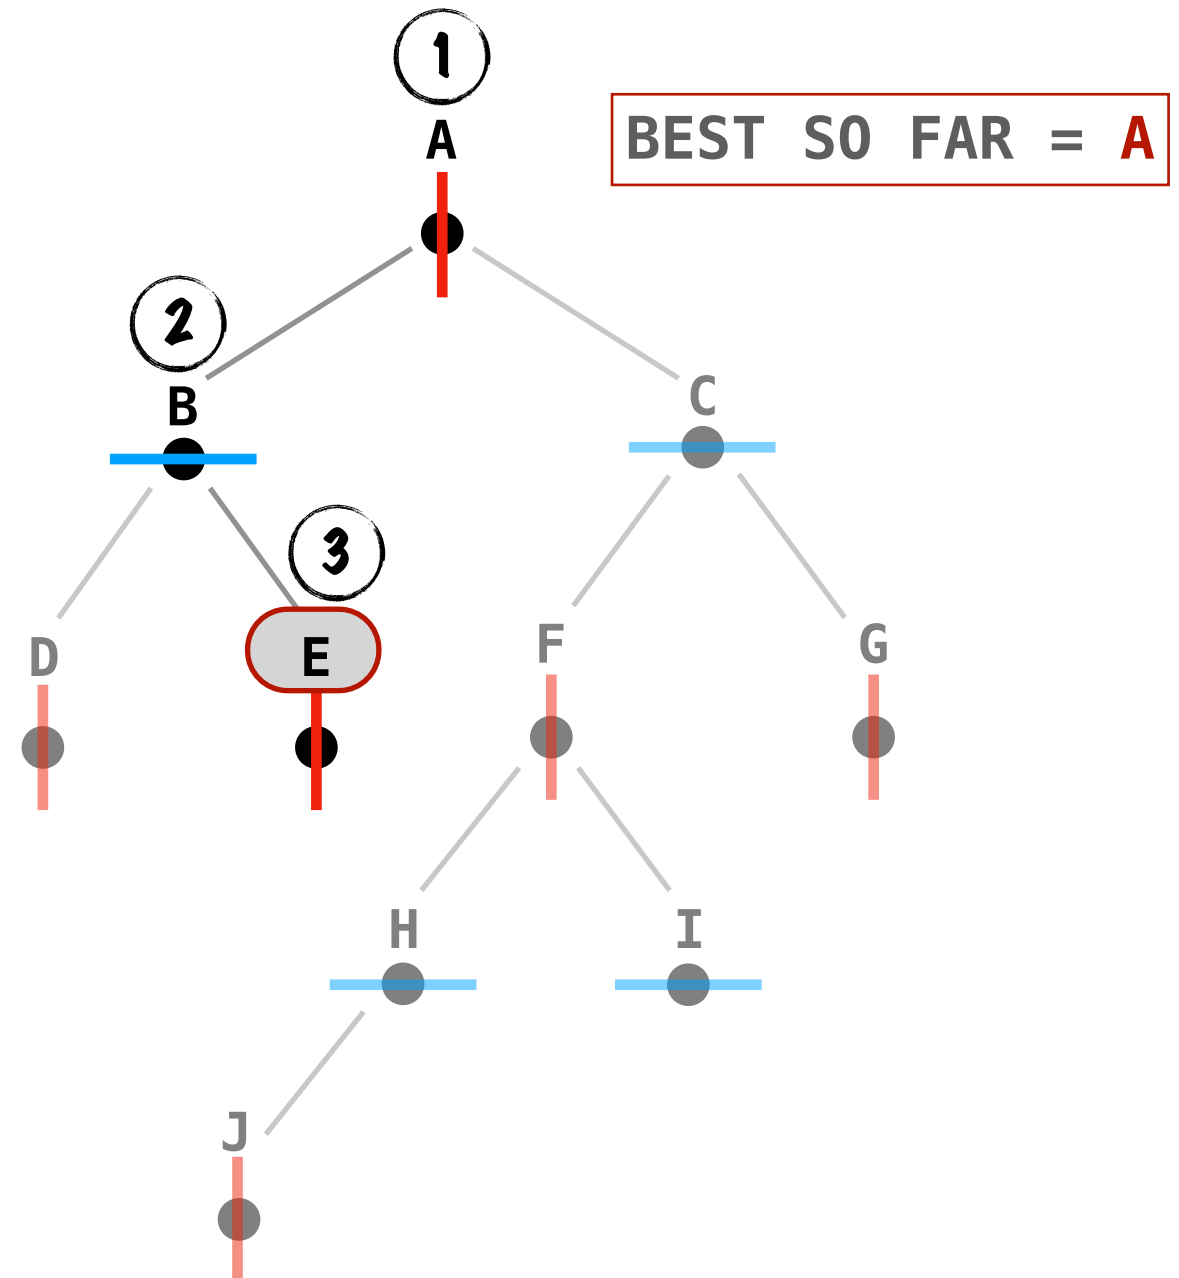

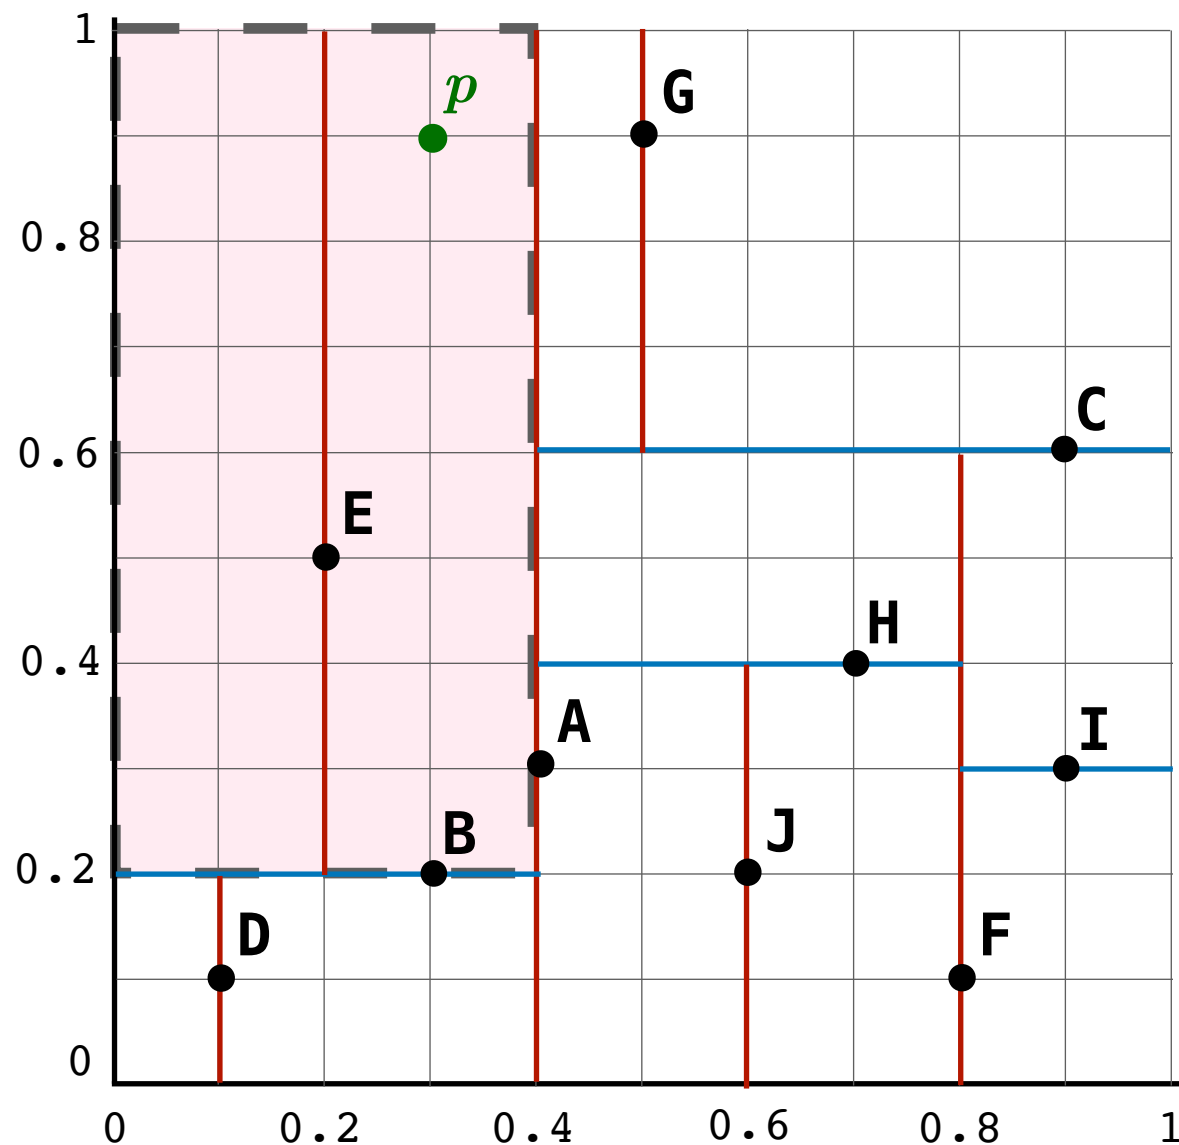

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

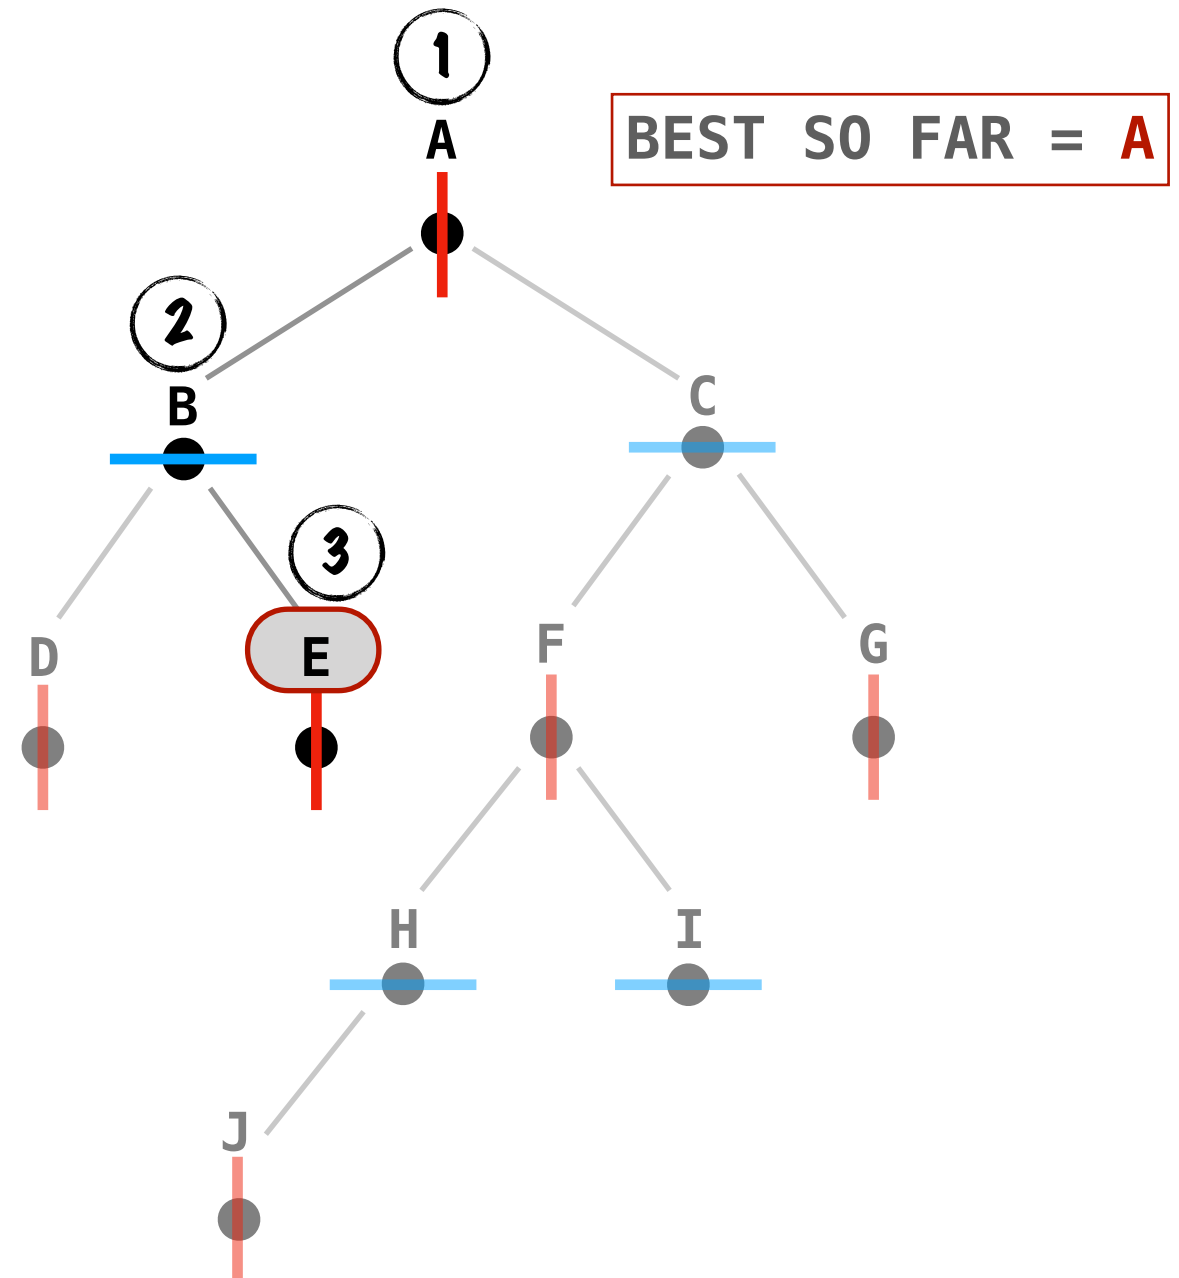

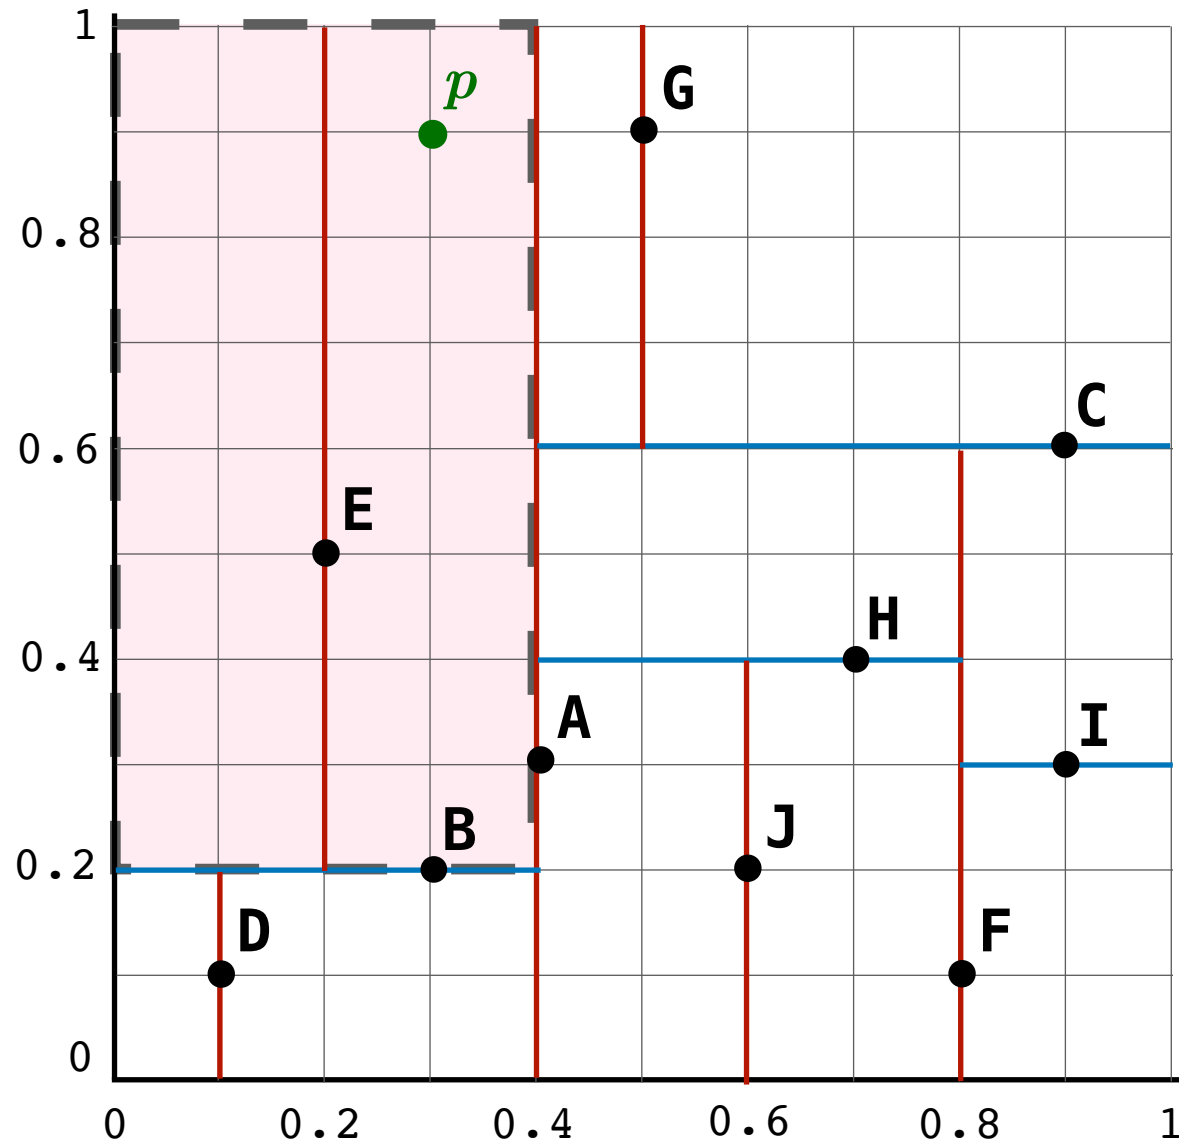

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

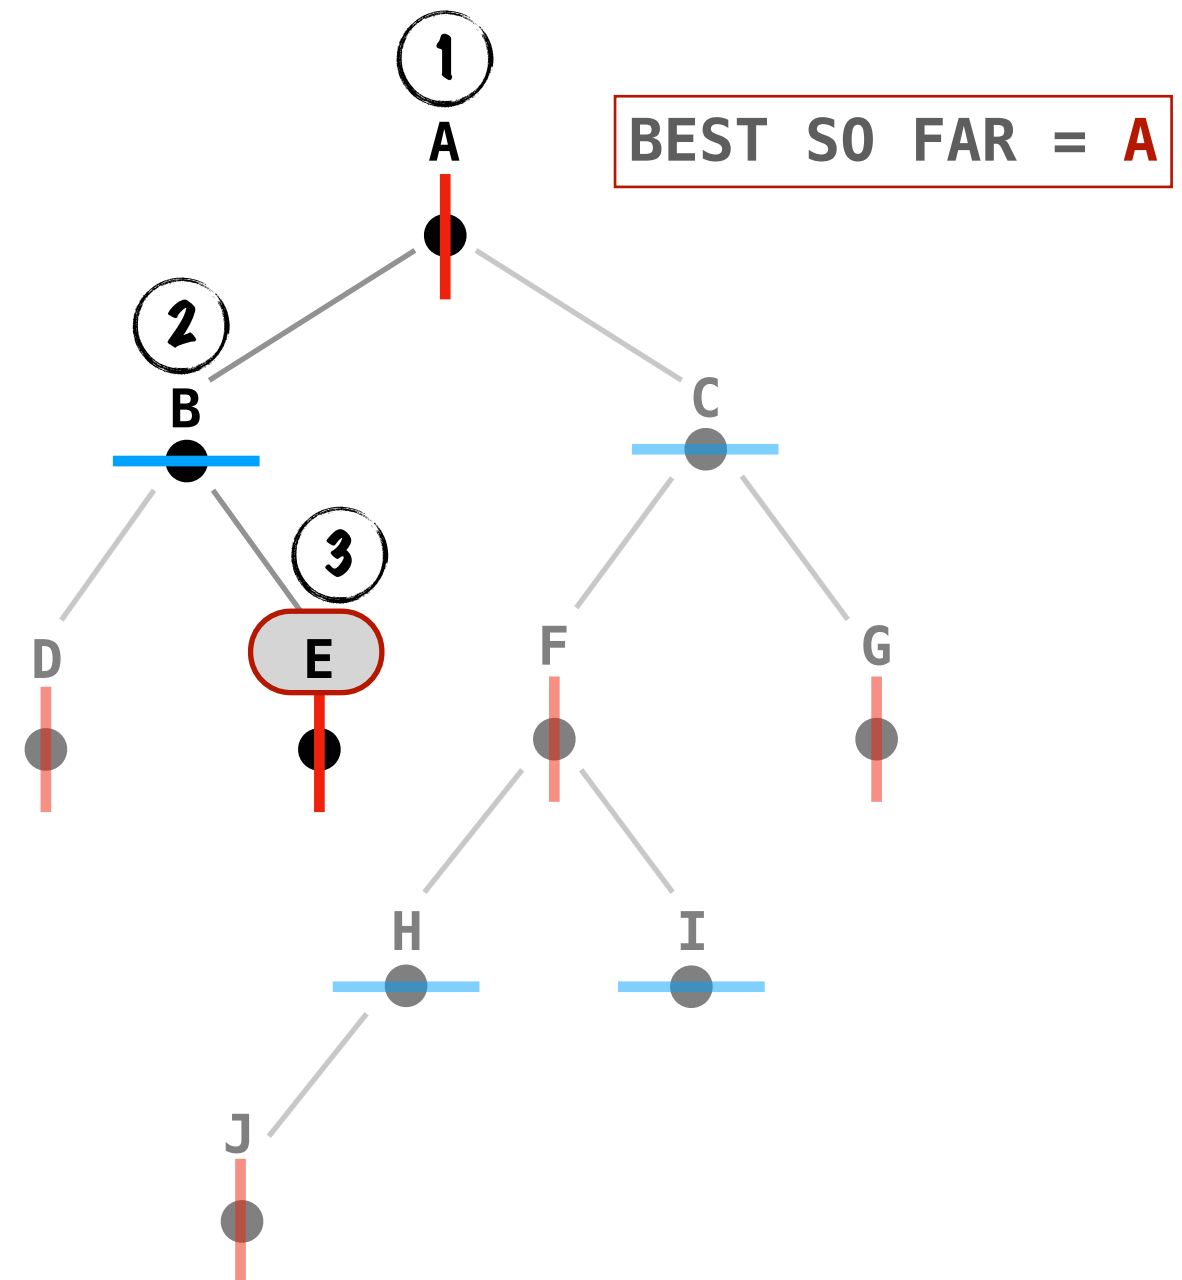

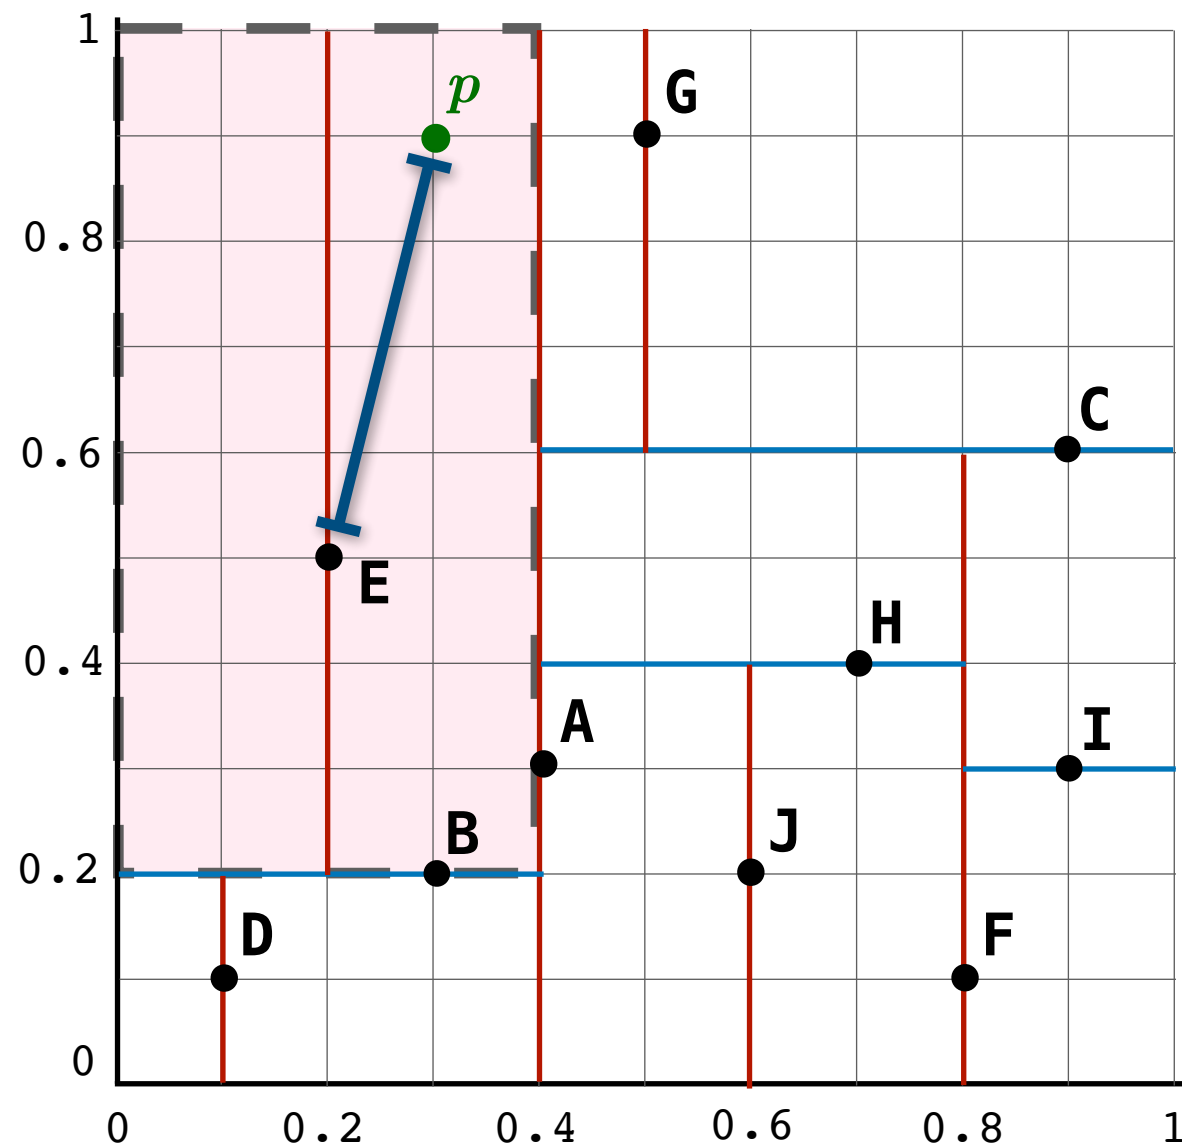

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

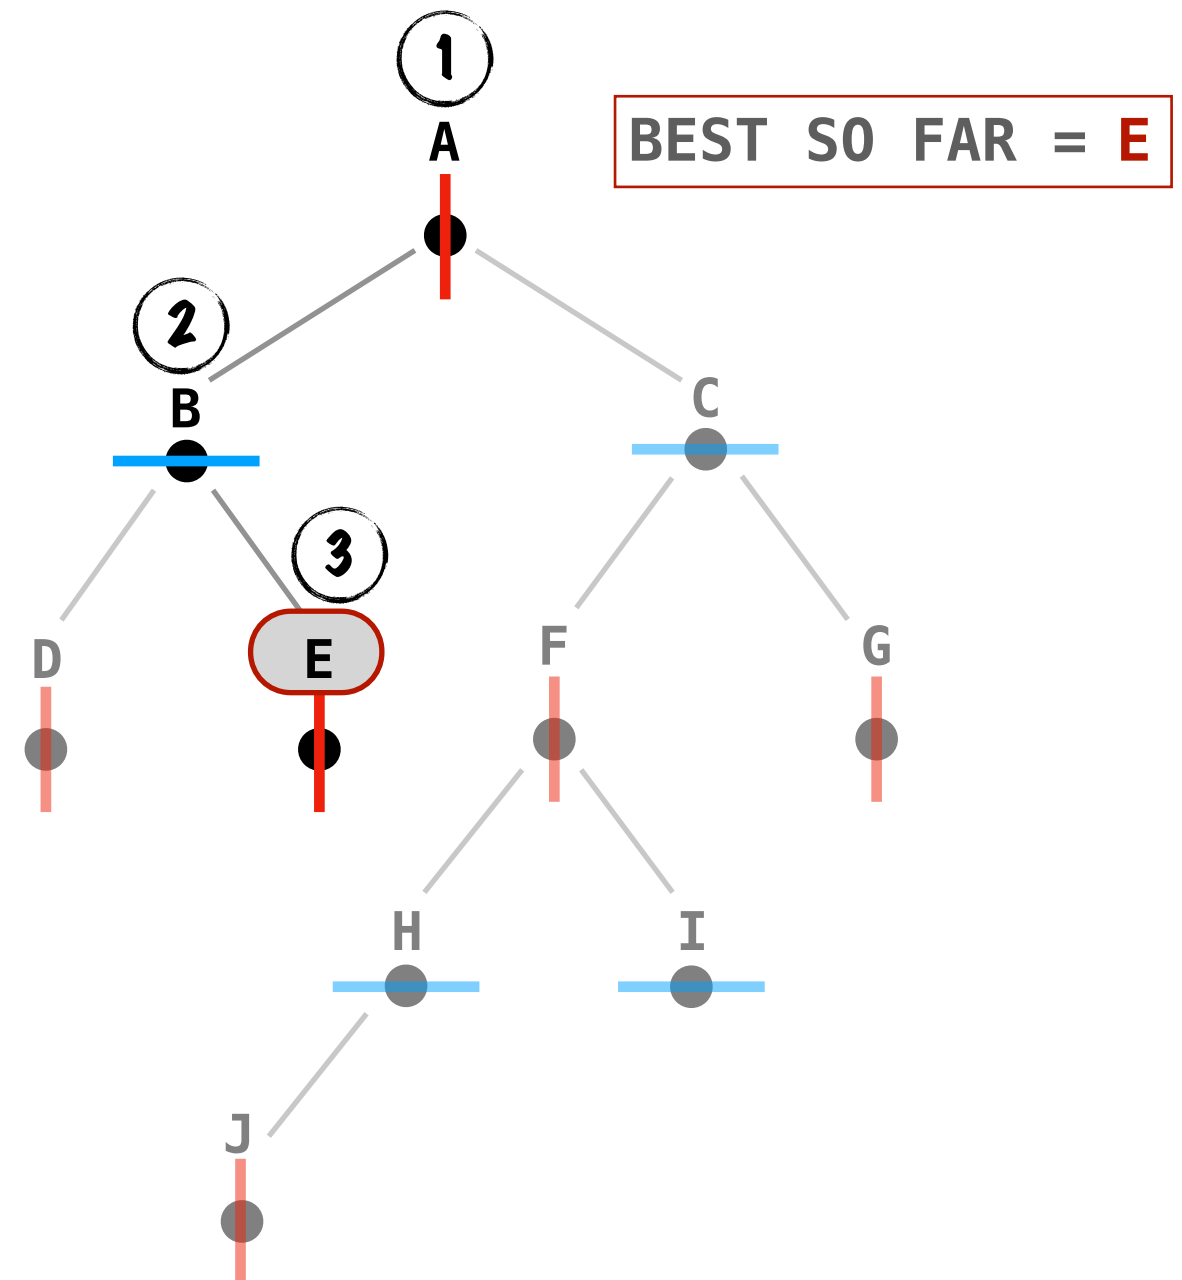

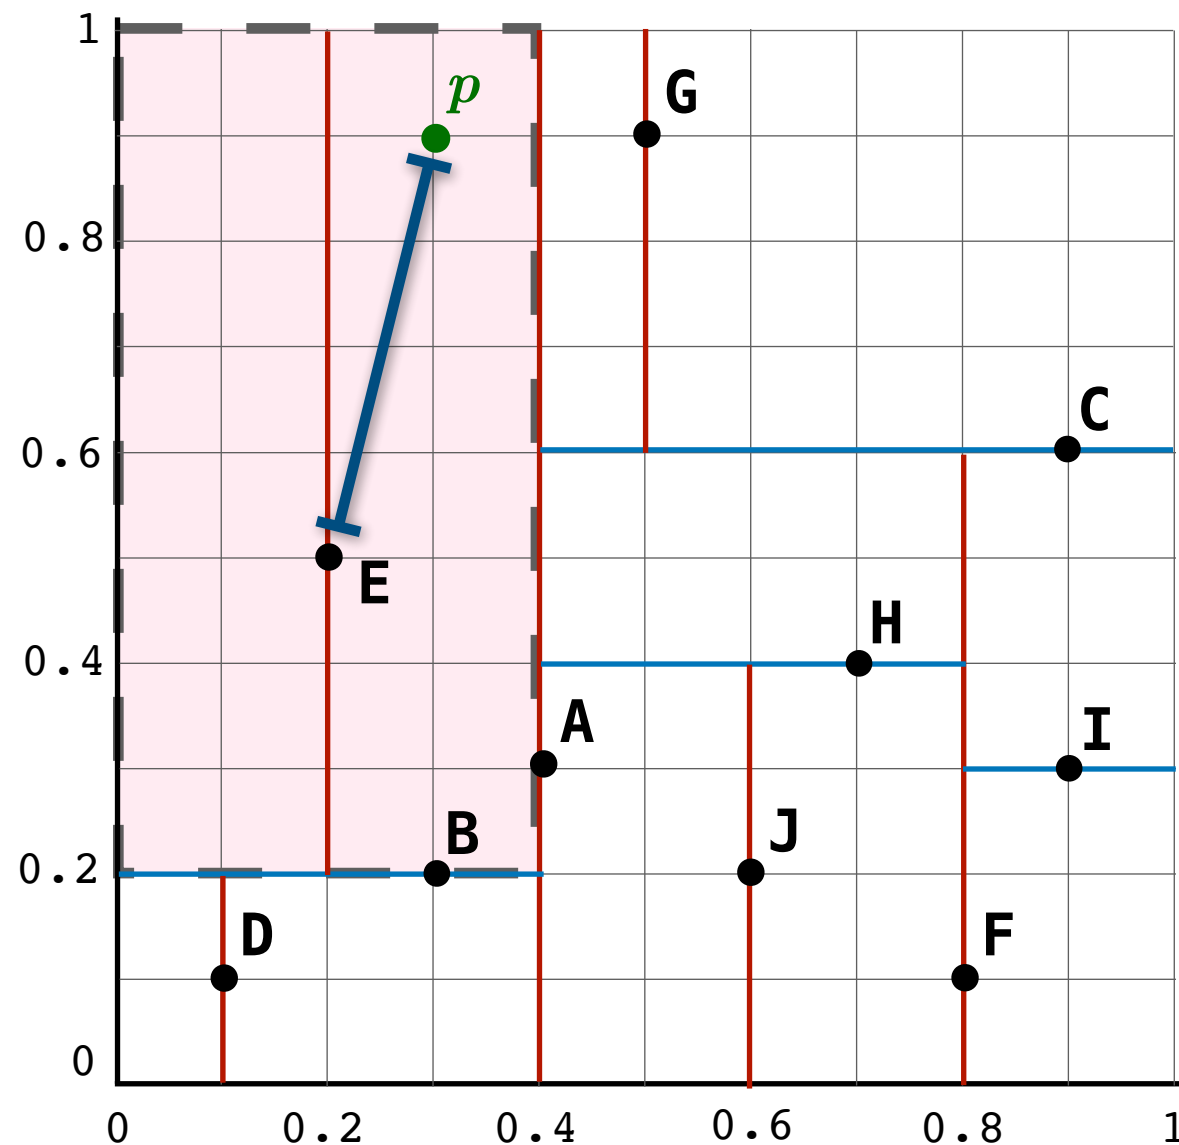

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

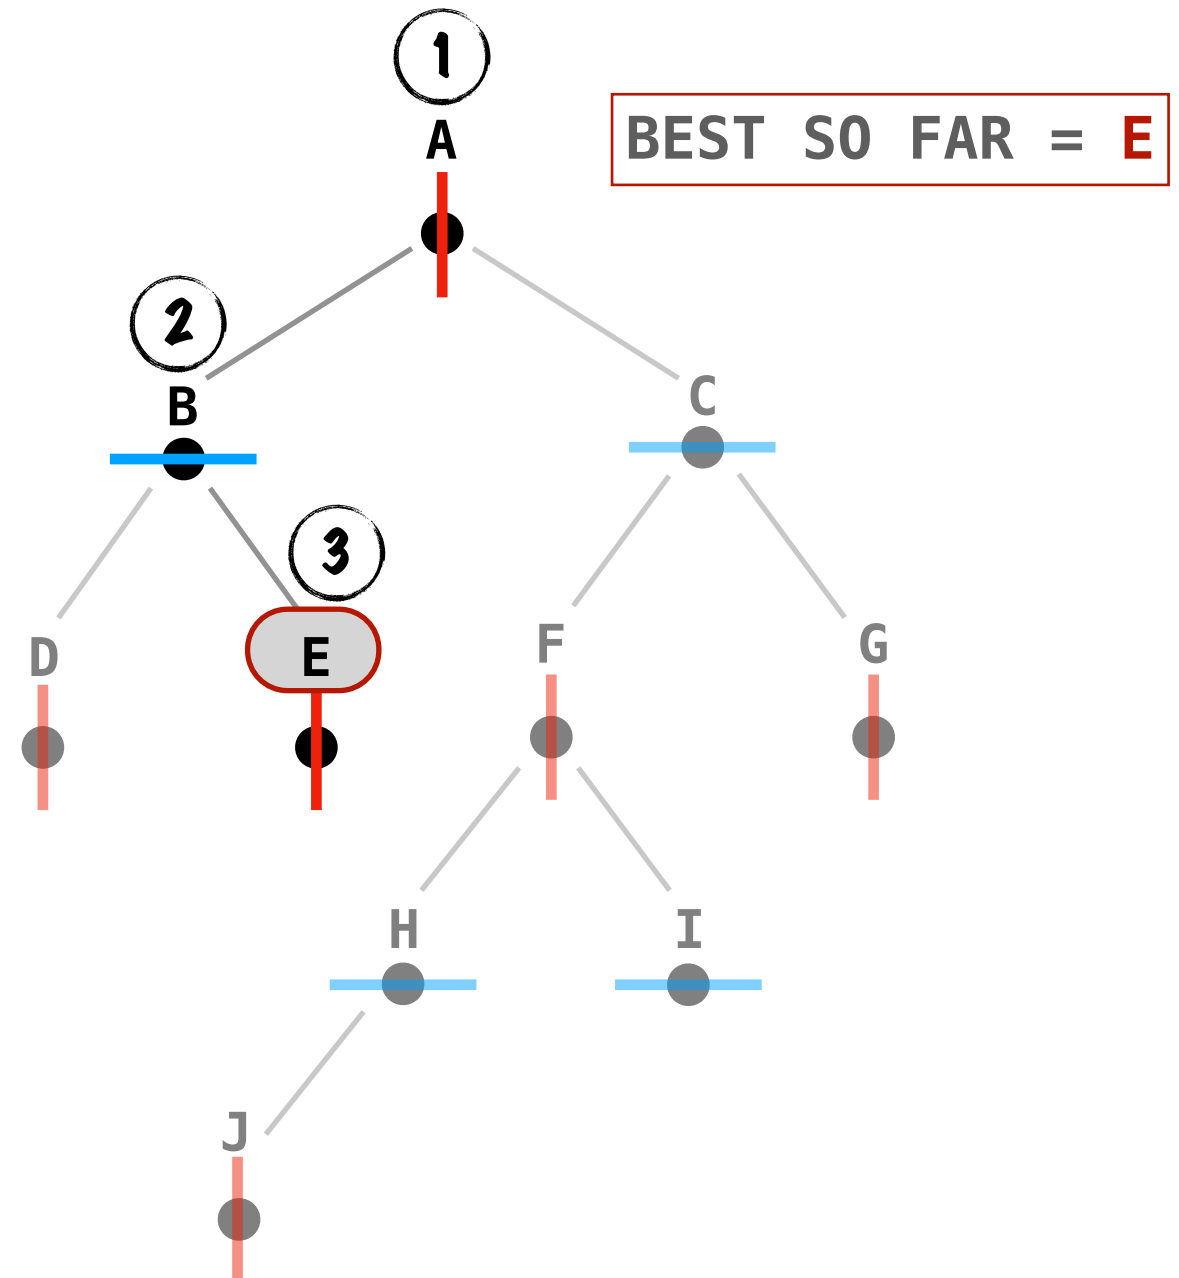

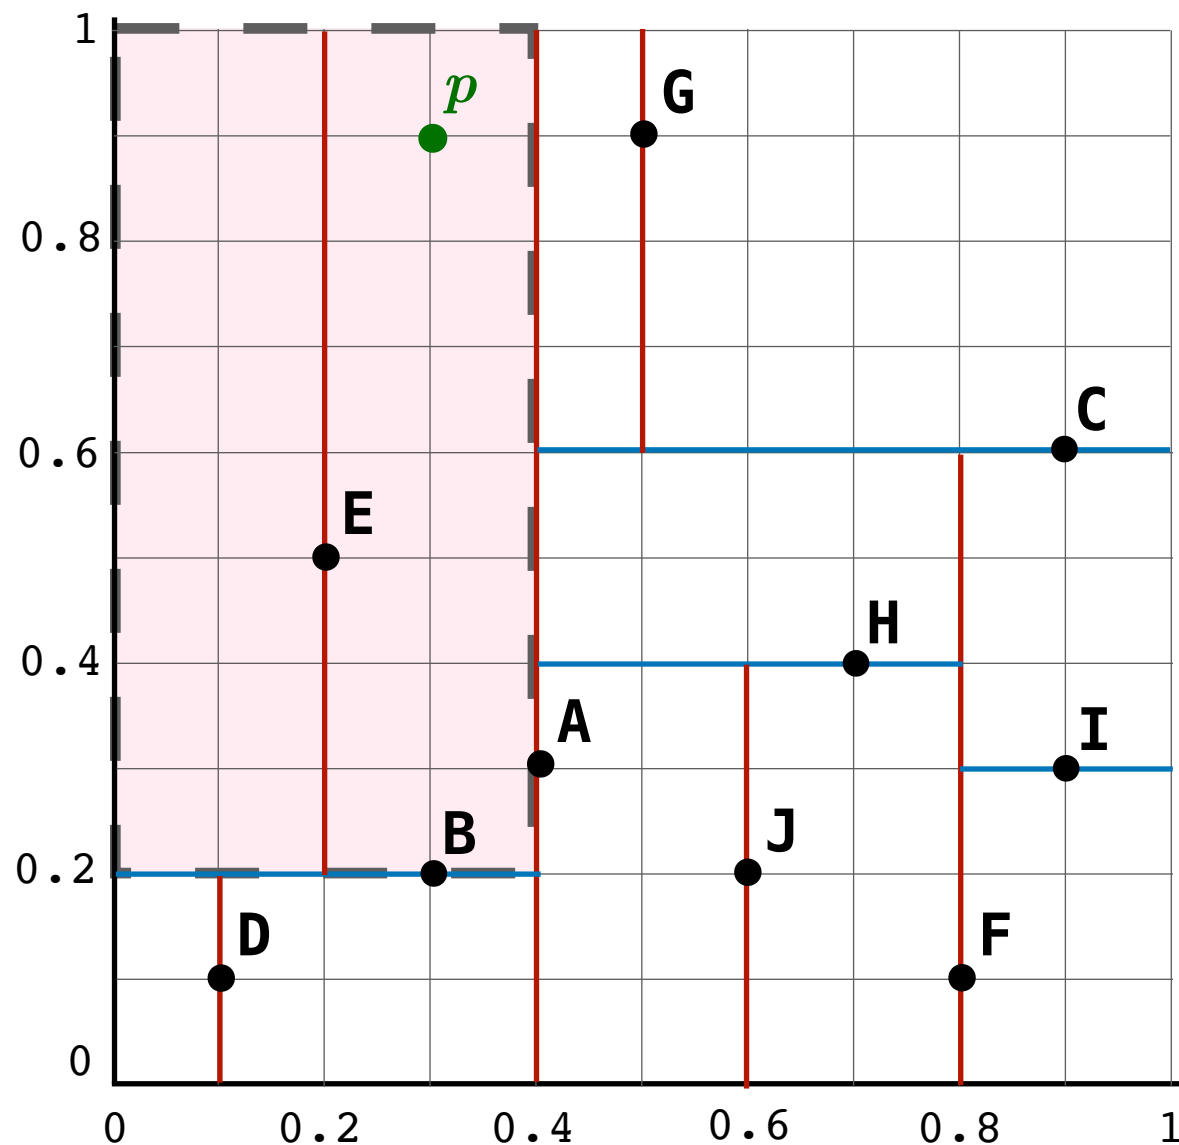

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

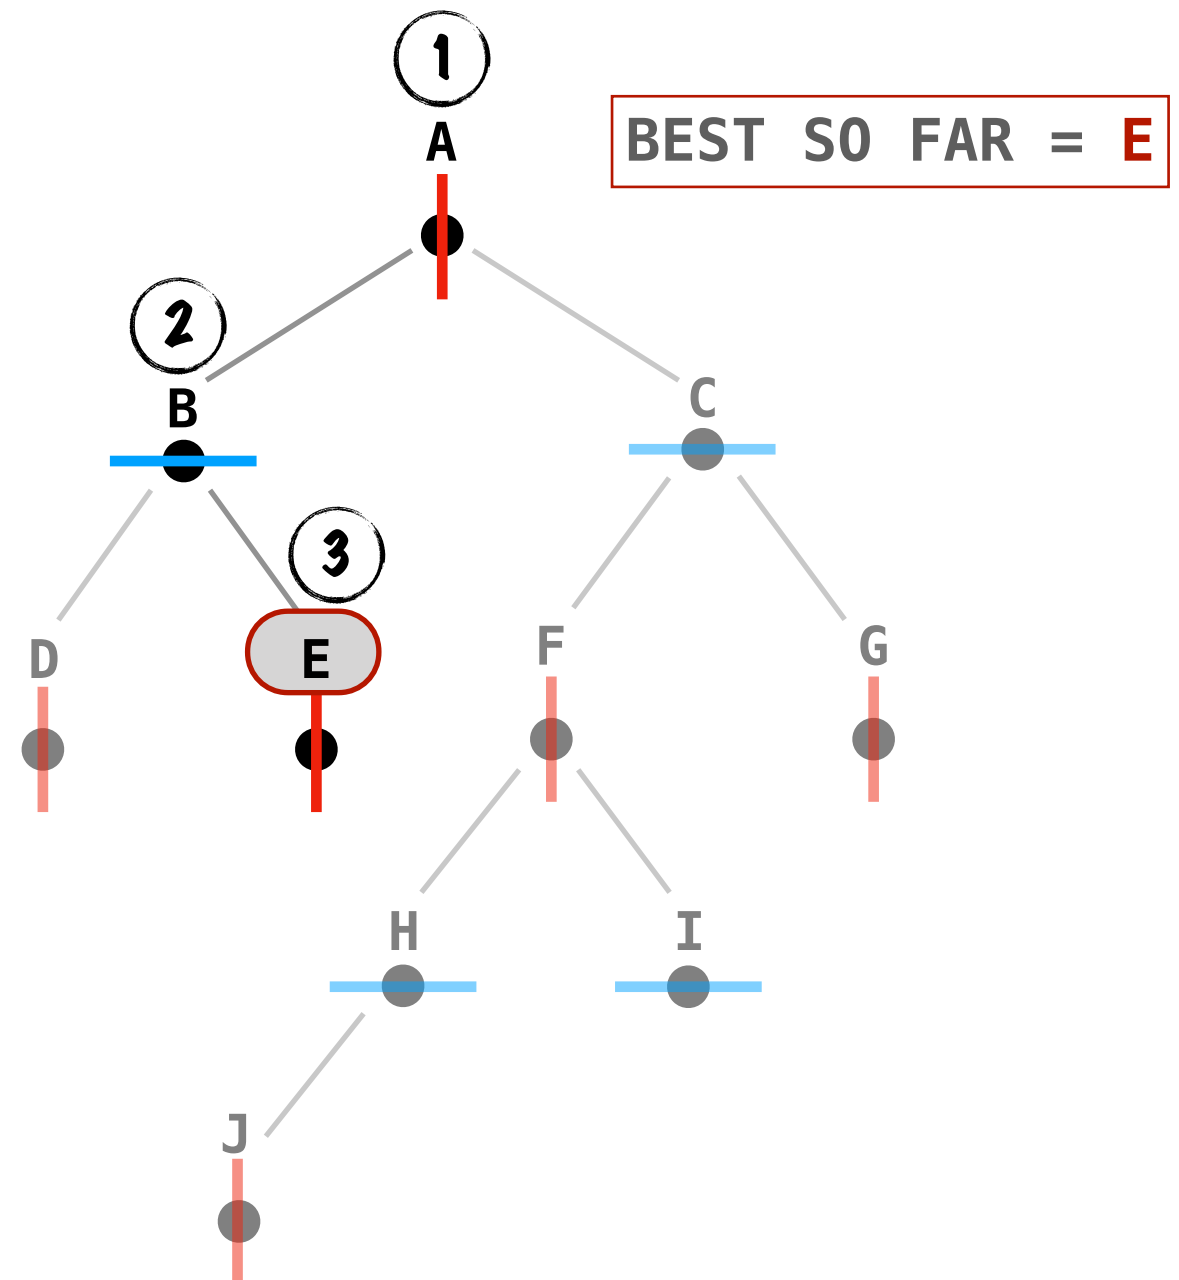

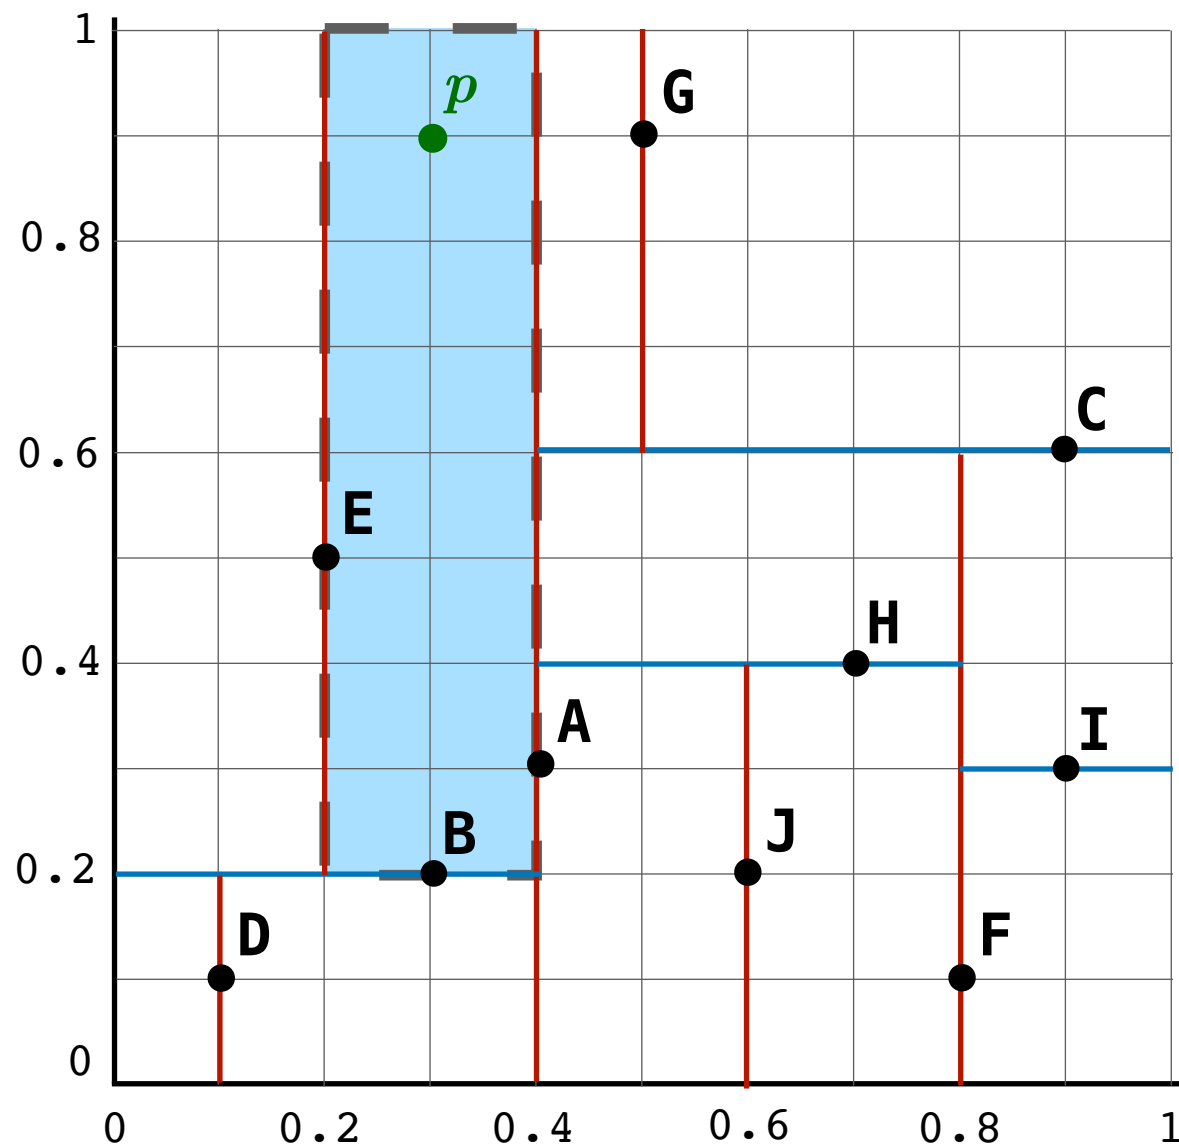

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else Go **right** then left.

## NN-QUERY PSEUDOCODE

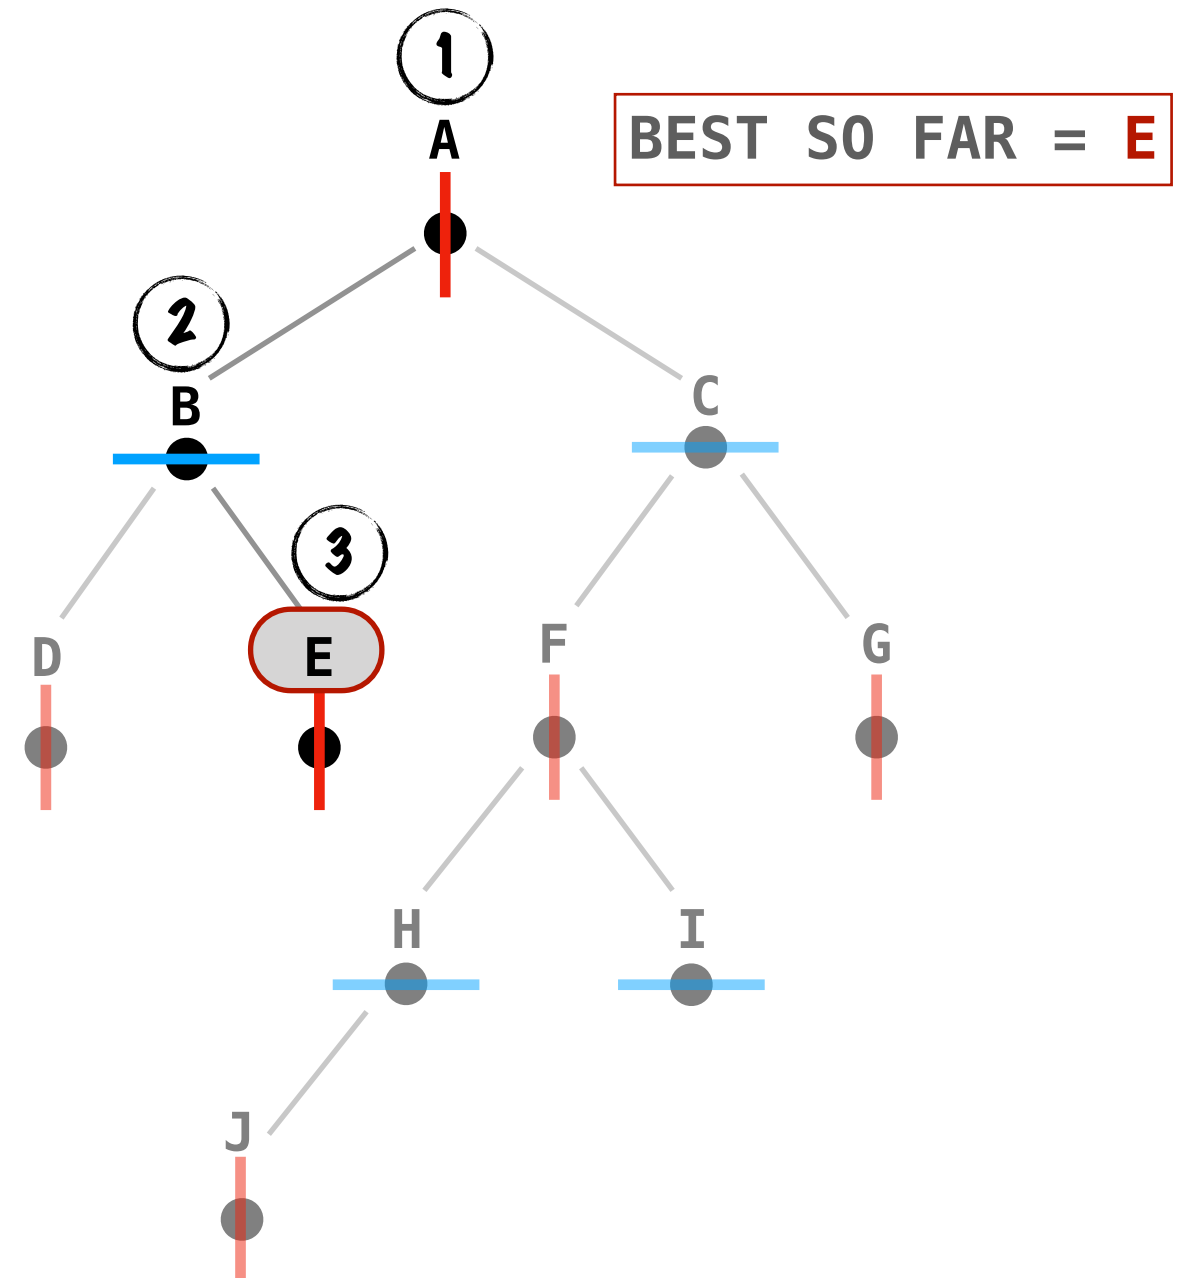

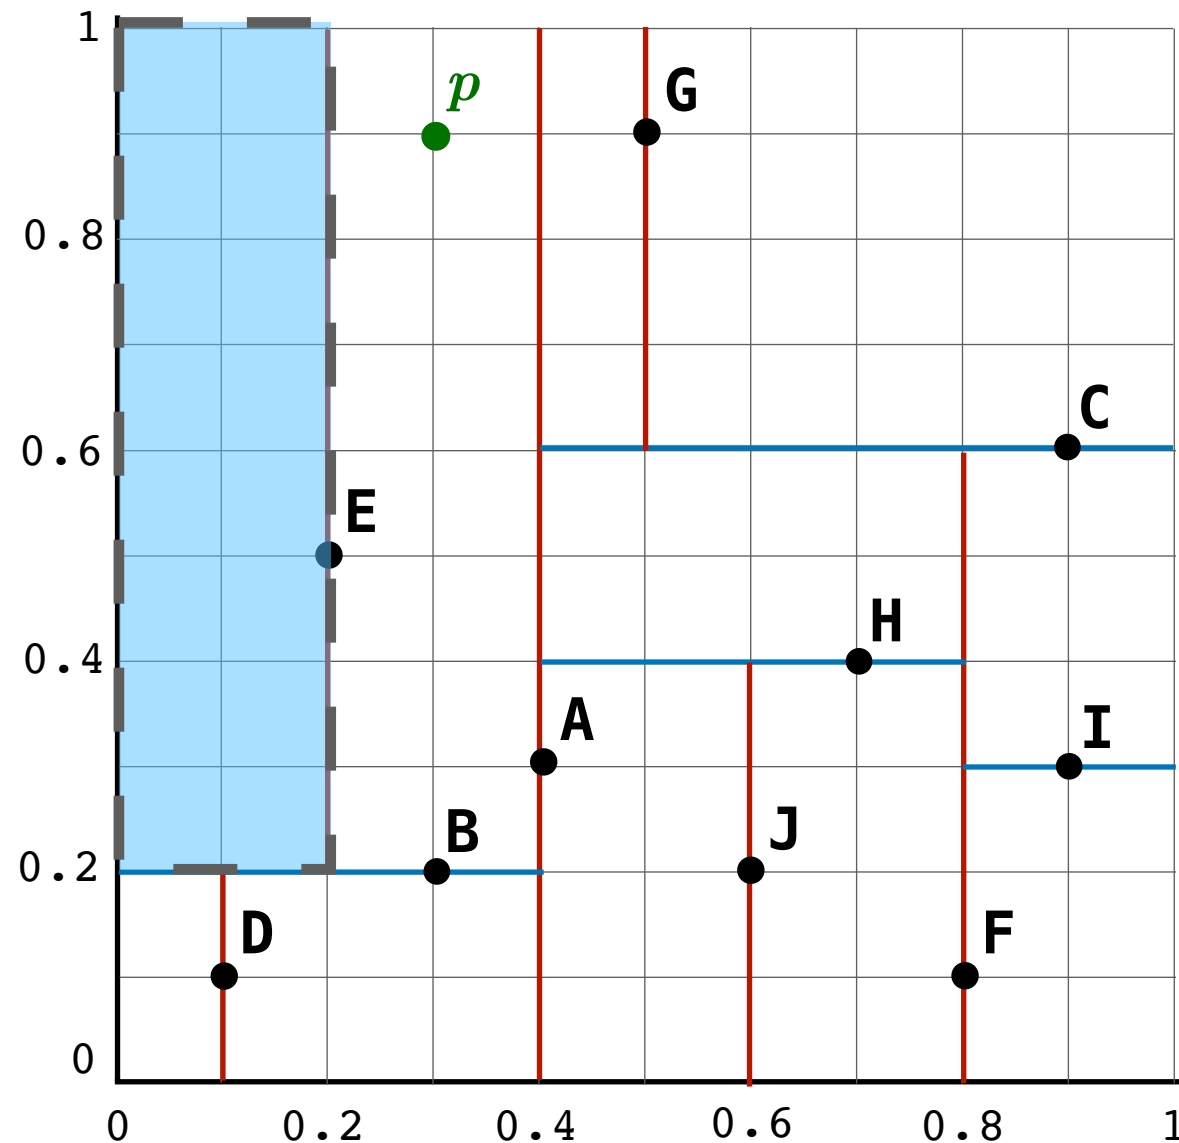

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left.**

## NN-QUERY PSEUDOCODE

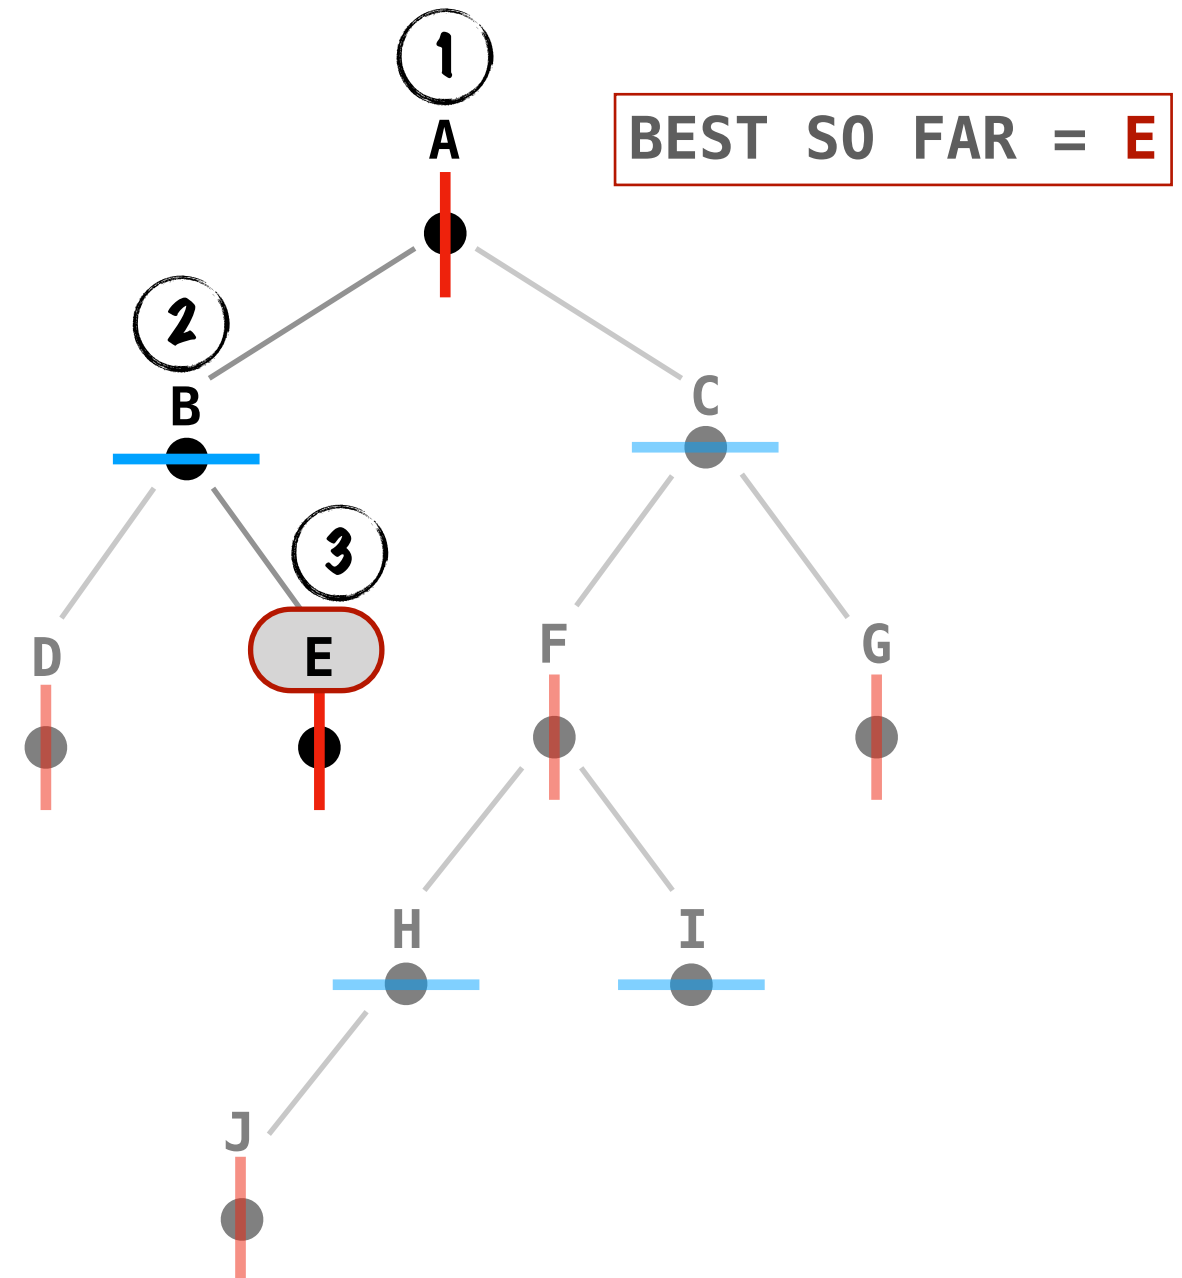

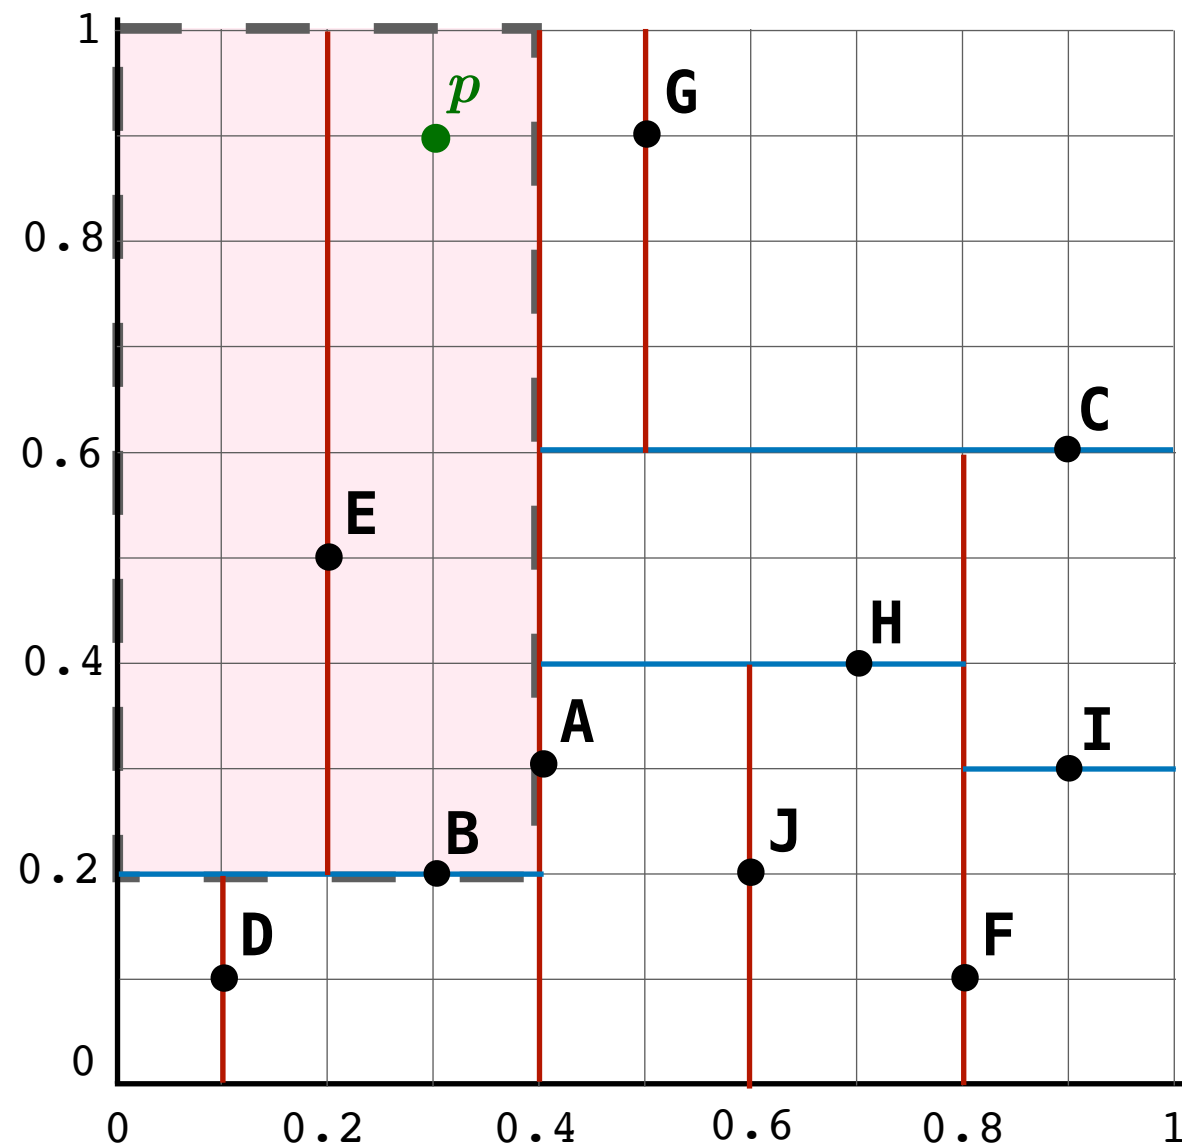

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

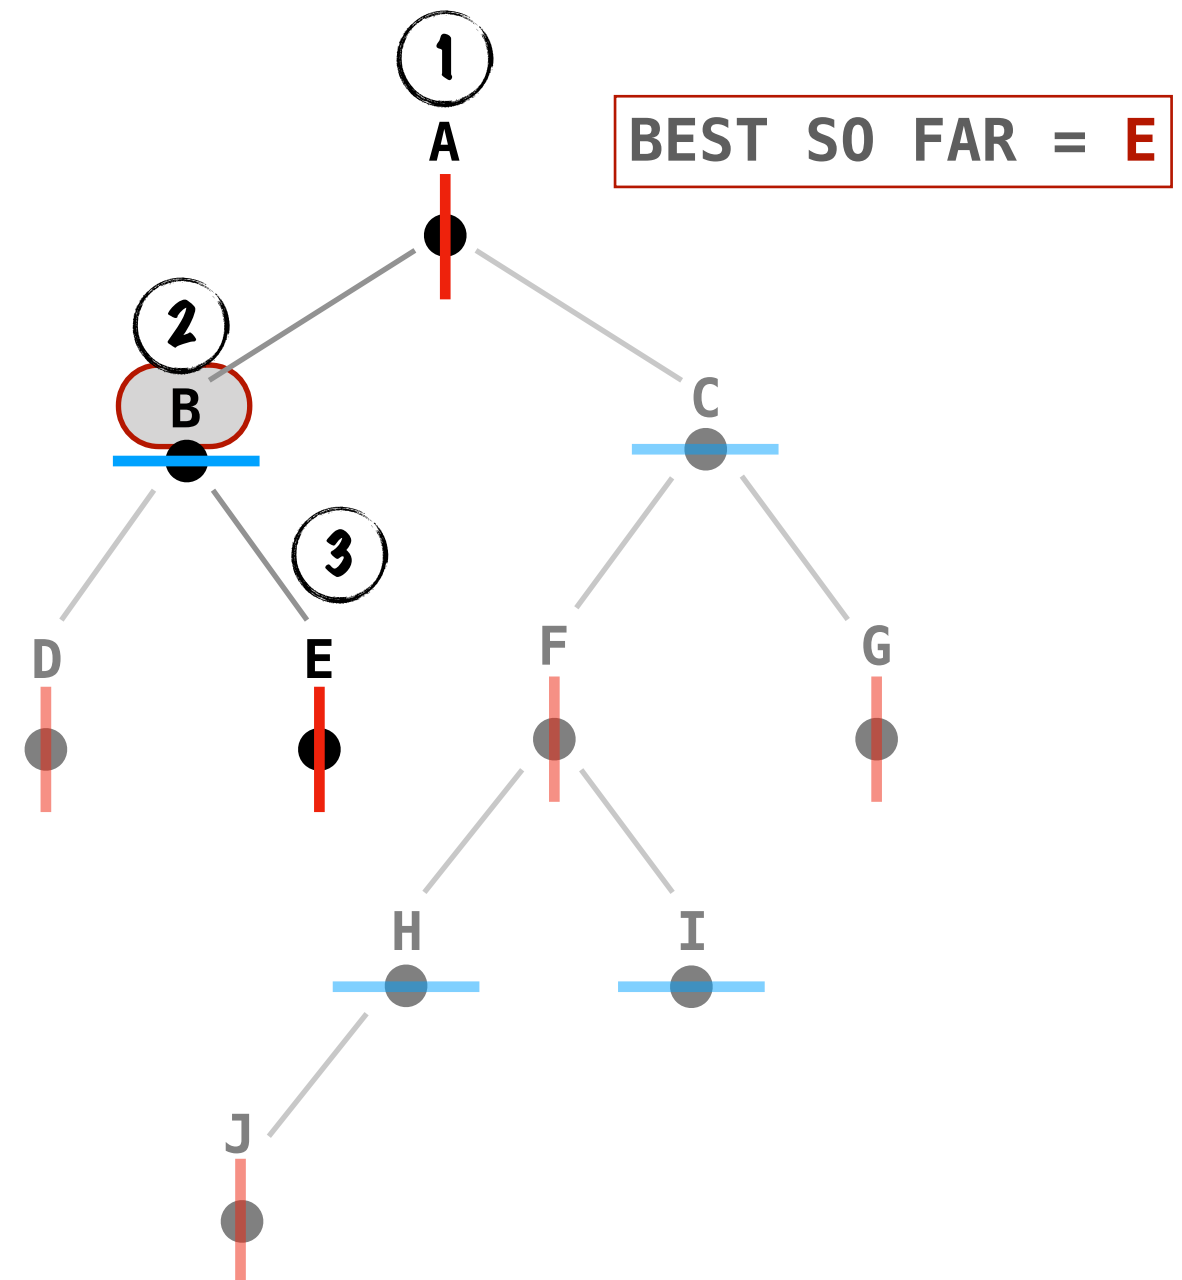

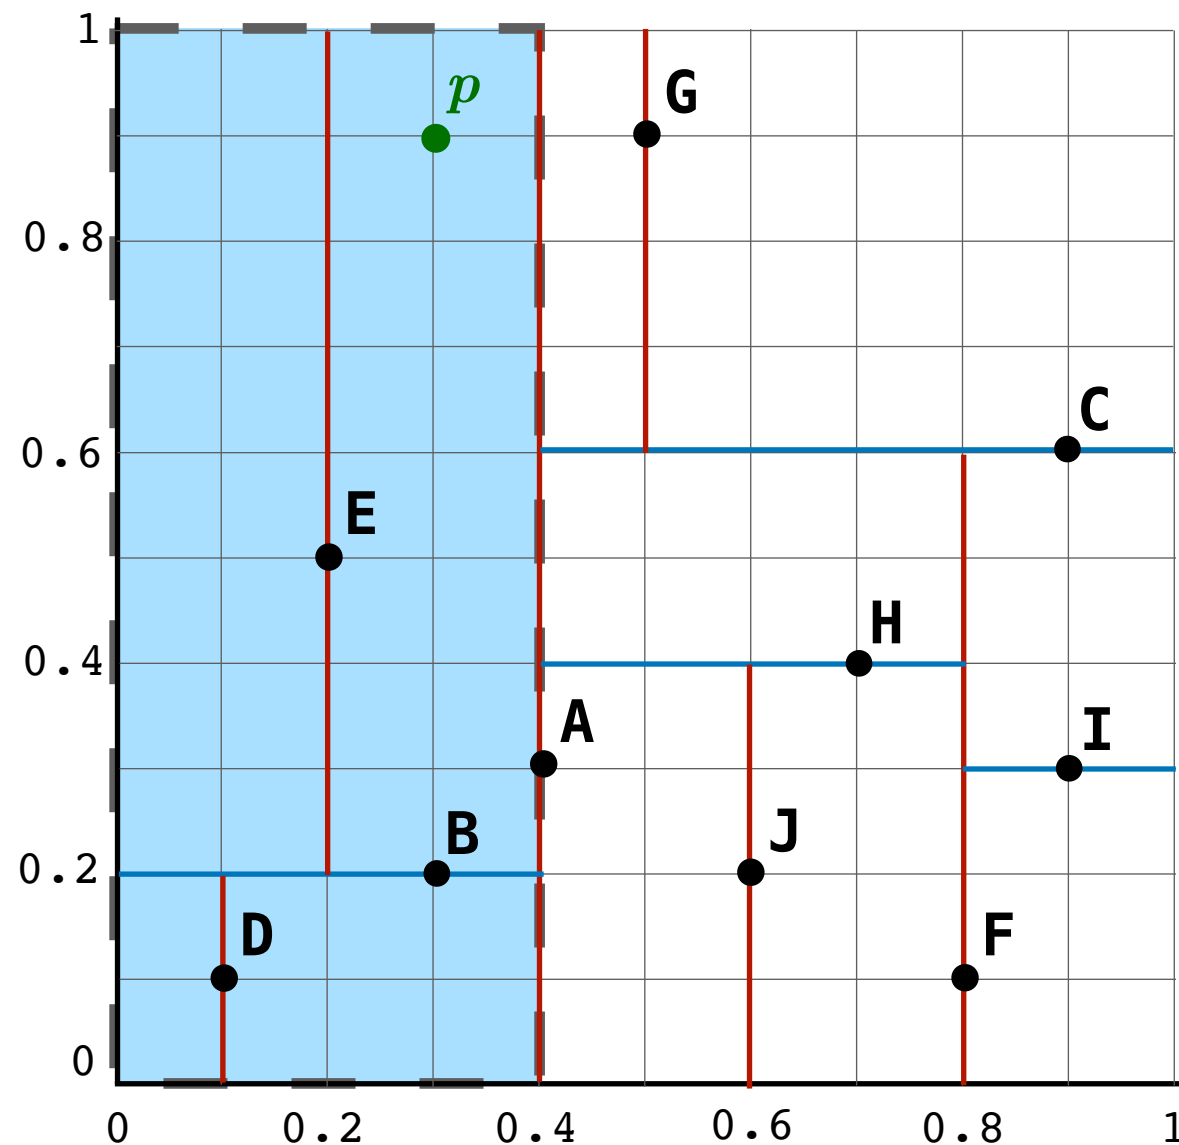

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left.**

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

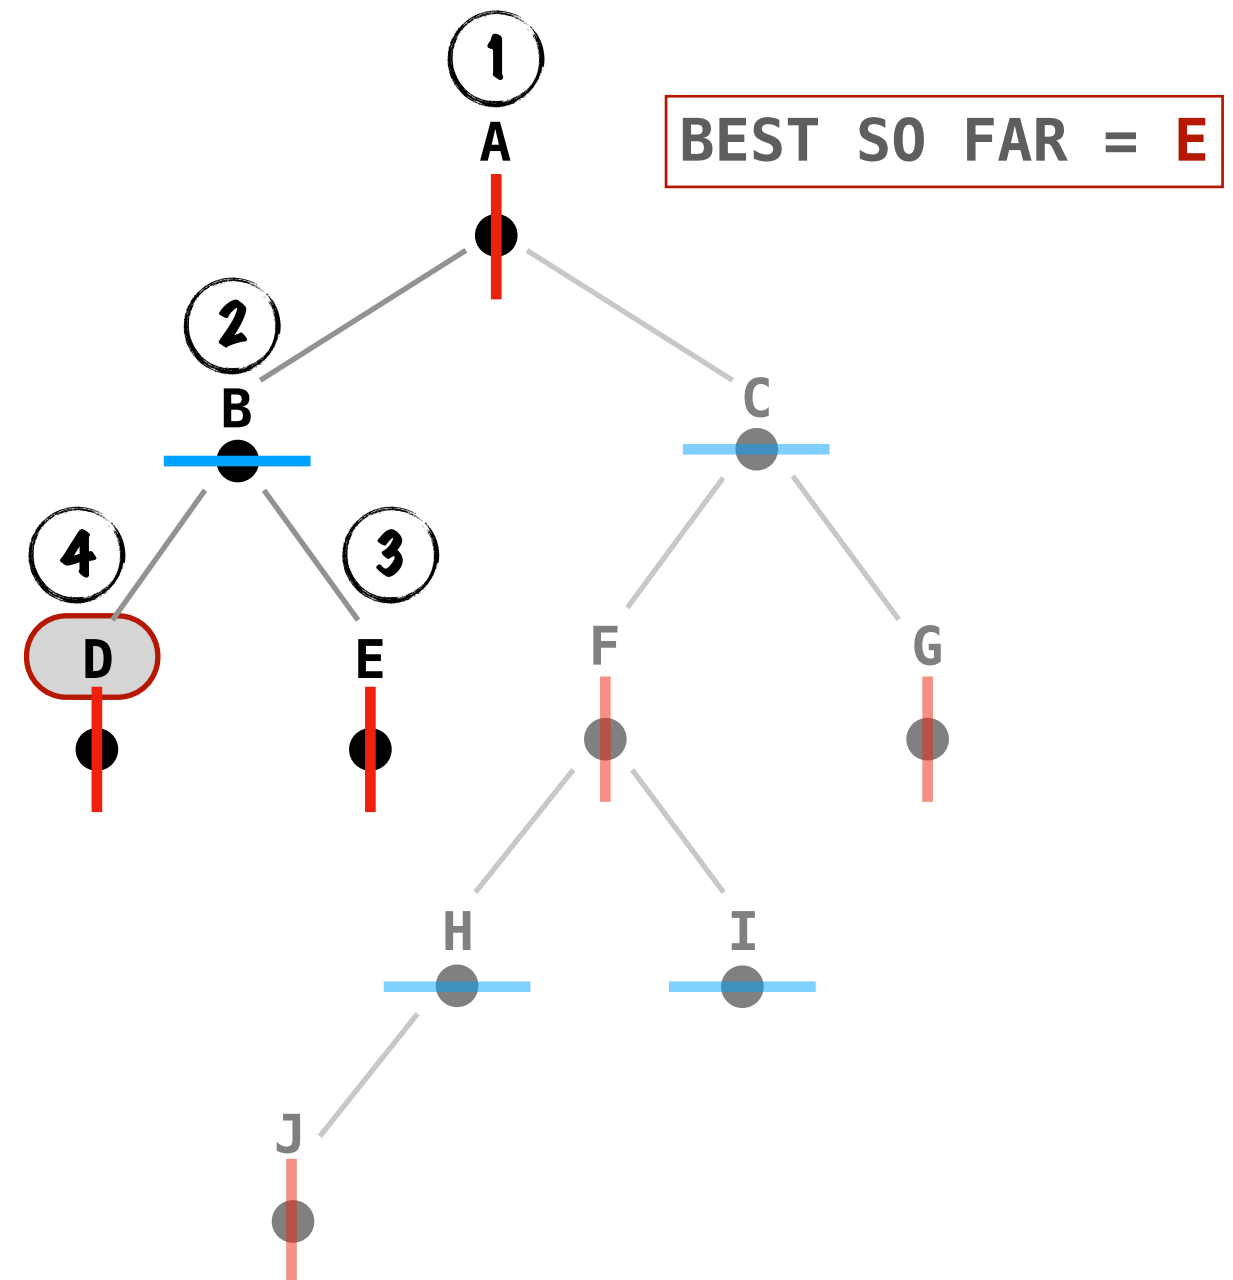

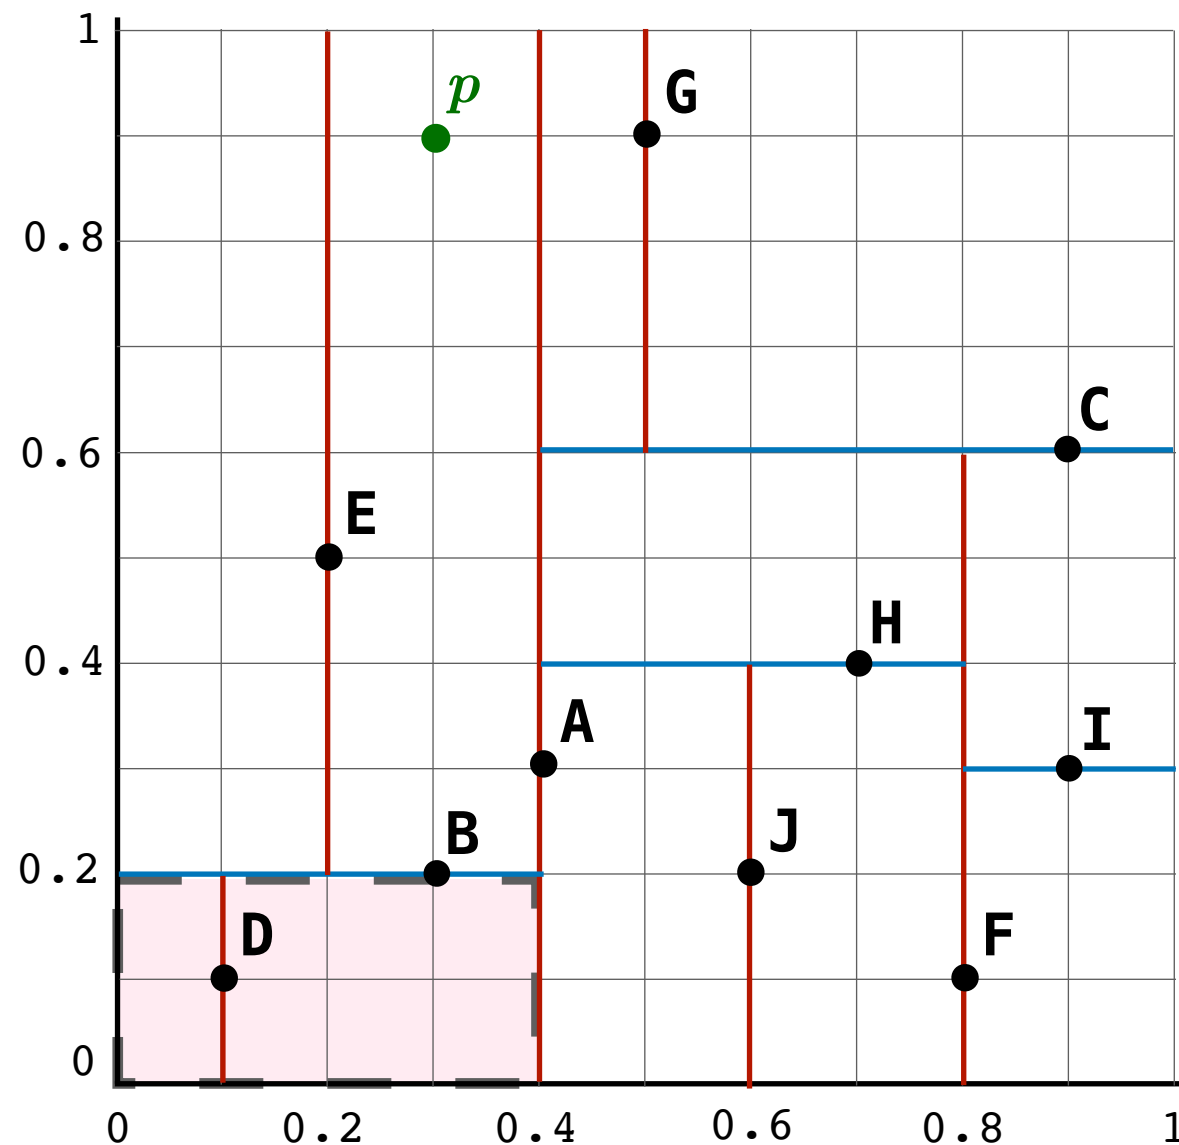

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else Go **right** then left.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below Go **left** then right

Else Go right then left.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left.**

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.

## NN-QUERY PSEUDOCODE

Return if the current node is **NULL**.

Return if bounding box is **not closer** than best so far.

Check if the point is **closer** than best so far.

If point is left or below **Go left then right**

Else **Go right then left**.
