

COS 302 / SML 305 / ECE 305 – Mathematics for Numerical Computing and Machine Learning

Princeton University

Instructor: Prof. Ryan P. Adams (OH Mon and Wed 1:30-3pm in COS 411)
Teaching Assistants: Alex Guerra (OH: Tues 4-6pm, location TBD)
Nick Richardson (OH: Mon 3-5pm, location TBD)
Lectures: Mon/Weds 12:30-1:20pm in Friend Center 008
Precepts: P02 – Thu 10:00-10:50am in Friend Center 110
P04 – Fri 12:30-1:20pm in Friend Center 110
URL: <https://www.cs.princeton.edu/courses/archive/fall22/cos302/>
Contact: cos302-f22@lists.cs.princeton.edu

Course Description

This course provides a comprehensive and practical background for students interested in continuous mathematics for computer science. The goal is to prepare students for higher-level subjects in artificial intelligence, machine learning, computer vision, natural language processing, graphics, and other topics that require numerical computation. This course is intended for students who wish to pursue these more advanced topics, but who have not taken (or do not feel comfortable with) university-level multivariable calculus (e.g., MAT 201/203) and probability (e.g., ORF 245 or ORF 309).

Topics will include vectors, matrices, norms, orthogonality, projection, eigenvalues, singular value decomposition, basic vector calculus, introductory probability, Monte Carlo, information theory, convex optimization, Lagrange multipliers, and gradient descent. Assignments will have both conceptual and coding components. Students will complete the coding portions in Python. Familiarity with programming will be assumed, but expertise in Python is not required.

Course Website

The course URL is <https://www.cs.princeton.edu/courses/archive/fall22/cos302/>. We'll also use Ed at <https://edstem.org/us/courses/28348/discussion/>. Most questions about the course, lecture/precept material, or the assignments should be addressed via Ed. The course instructors will regularly check this discussion board with the goal of posting responses

within 24 hours. Students taking the class are also encouraged to post responses. Code examples can be posted, but don't post anything you wouldn't be expected to share with other students in the class as per the collaboration policy. Long, detailed questions are probably best answered during office hours. Questions that are not appropriate for the discussion board may be sent to the staff via email. Use your judgement.

Precepts

There will be two 50-minute weekly precepts led by the teaching assistants. New material may be presented in the precepts (see course schedule), so attendance is strongly encouraged.

Textbook and Course Materials

This course will use a brand new **freely-available** textbook: Marc Peter Deisenroth, A. Aldo Faisal, and Cheng Soon Ong. *Mathematics for Machine Learning*. Cambridge University Press. 2020. Get the PDF at <https://mml-book.github.io/>. If you notice errors in the book, please let me know and I will pass them on to the authors personally.

Requirements and Grading

The assignments together represent 60% of the final grade, with the lowest one being dropped. There is a midterm and a final, each representing a further 20% of the final grade.

Assignments

There are eleven homework assignments. After dropping the lowest one, each of the remaining ten represents 6% of your total grade. These homework assignments will involve components that are theoretical or conceptual, as well as some practical implementation using **Colab notebooks**. You will turn in your assignment as a PDF (compiled via \LaTeX) to **Gradescope**. If you are not already familiar with \LaTeX , it is recommended that you use **Overleaf**. Templates of the assignments will be posted there to help get you started. Homework assignments should be done individually.

Collaboration Policy

We want you to be able to discuss the class material with each other, but we want the homework you submit to be your own work. More specifically:

- You may never:
 - Share code.
 - Share writeups.
- You may always:

- Discuss the related concepts and the high-level approach.
- Discuss the results of your experiments at a high level, e.g., “I got 90% test accuracy.”
- You should be wary of discussing details of proofs, your code, or results at an implementation level, rather than at the “big idea” level.
- In your assignment writeup, state who you discussed the problems with.
- It is prohibited to search the internet for assignment solutions.

Late Policy

Homework assignments may be turned in up to a week late for a 50% penalty. There will be no exceptions and no further extensions. This class does not use “late days”. Plan ahead.

Changelog

- 5 September 2022 – Initial F22 version.
