Raft

Nov 3, 2022
Raft

System for enforcing strong consistency (linearizability)

Similar to Paxos and Viewstamped Replication, but much simpler

- Clear boundary between leader election and consensus
- Leader log is ground truth; log entries only flow in one direction (from leader to followers)
Assignment 3 hints

You will implement the *leader election* portion of Raft in assignment 3
You will implement the *log replication* portion of Raft in assignment 4

Use `time.Timer` and `select` statements to implement timeout
- Need to time out on heartbeats → Start election
- Need to time out on waiting for majority of votes

Raft logs are 1-indexed; add a dummy entry in the first slot to enforce this

When voting for yourself, you can skip the RPC
Importance of **readability**

A luxury for small projects, but a necessity for large and complex projects

HW4 will build on top of your solution for HW3
HW3 only accounts for about 20% of the work

Some tips:
- Duplicate code is *really* bad; avoid at all costs
- If a function is more than 30 lines, it is too long → split!
- Avoid nested if-else’s; use returns and continues where possible

*State required for election*
Leader election

Everyone sets a randomized timer that expires in \([T, 2T]\) (e.g. \(T = 150\text{ms}\))

When timer expires, increment term and send a RequestVote to everyone

Retry this until either:

- You get majority of votes (including yourself): become leader
- You receive an RPC from a valid leader: become follower again

RequestVoteReply
Term: 4
VoteGranted: True
Conditions for granting vote

1. We did not vote for anyone else in this term
2. Candidate term must be \( \geq \) ours
3. Candidate log is at least as up-to-date as ours
   a. The log with higher term in the last entry is more up-to-date
   b. If the last entry terms are the same, then the longer log is more up-to-date
Which one is more *up-to-date*?
Which one is more *up-to-date*?
Which one is more *up-to-date*?

1 1 1 2 3

1 1 4 ✔
Why reject logs that are not *up-to-date*?

Leader log is always the ground truth

Once someone is elected leader, followers must throw away conflicting entries

Must NOT throw away committed entries!

*Note: Leader log doesn’t need to be the MOST up-to-date among all servers; it just needs a majority vote.*
What if we accept logs that are not as up-to-date as ours?
Suppose entries 4-5 have already been committed.

Then previous leader S0 crashes and S3 times out.

If S3 becomes leader then committed entries 4 and 5 may be overwritten!
<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>S0</td>
<td>X</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>S1</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
<tr>
<td>S2</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
<tr>
<td>S3</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>S4</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Why is it OK to throw away these entries?

If these entries had been committed, then it means they must exist on a majority of servers.

In that case S4 could receive votes from the same majority and become a valid leader.

The correct sequence is marked with a green checkmark.
Q2: Is this a possible configuration?

S0: 1 1 2 3
S1: 1 1 2 3
S2: 1 1 2 3
S3: 1 1 4
S4: 1 1 1 1 1

NO!

S3 cannot become leader in term 4 (Who’s going to vote for him?)
Q3: Is this a possible configuration?

Yes

What happened to terms 2 and 3?

1. Split vote: no one became leader
2. Partitions: no one became leader
3. Simply no requests in these terms
Q4: Is this a possible configuration?

Let's try tracing the steps...

NO!
Q4: Is this a possible configuration?

<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>S0</td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>S1</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>S2</td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- **S0**: 1, 1
- **S1**: 1, 1, 1
- **S2**: 1, 1

**Possible configuration:**

<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>S0</td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>S1</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td>3</td>
</tr>
<tr>
<td>S2</td>
<td>1</td>
<td>1</td>
<td></td>
<td>3</td>
</tr>
</tbody>
</table>
Q4: Is this a possible configuration?

No one becomes leader in term 2...
Q4: Is this a possible configuration?
Q4: Is this a possible configuration?
Q4: Is this a possible configuration?

<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>S0</td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>S1</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td>4</td>
</tr>
<tr>
<td></td>
<td>1</td>
<td>1</td>
<td>3</td>
<td></td>
</tr>
</tbody>
</table>

S0 previously voted for S2 in term 3
S0 can only vote for S1 for term 4!
Q4: Is this a possible configuration?

<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>S0</td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>S1</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td>3</td>
</tr>
<tr>
<td>S2</td>
<td>1</td>
<td>1</td>
<td>3</td>
<td></td>
</tr>
</tbody>
</table>

The two entries in term 3 are in different positions.

S1 and S2 could not have written these entries without being leaders.

But they can’t both be leaders in the same term!
Q5: Is entry 2 (term 2) guaranteed to be committed?

Yes!

Entry 2 is on a majority of nodes
No one else has a more up-to-date log
Q6: Is entry 3 (term 2) guaranteed to be committed?

NO!

S3 could become leader if S0 crashes

Entry 3 is an entry from an old term
(See Figure 8 in Raft paper)
Q7: Is entry 3 (term 2) guaranteed to be committed?

S3 could still become leader if S0 crashes (votes from S2, S3 and S4)

NO!
Q8: Is entry 3 (term 2) guaranteed to be committed?

Yes!

Entry 4 is guaranteed to be committed because no one else has a more up-to-date log.

All entries before entry 4 are safe.
