Database Programming (Part 1)

Copyright © 2025 by Robert M. Dondero, Ph.D. Princeton University

Objectives

- We will cover:
 - Databases (DBs) and database management systems (DBMSs)...
 - With a focus on relational DBs and DBMSs...
 - With a focus on the SQLite DBMS...
 - With a focus on programming with SQLite

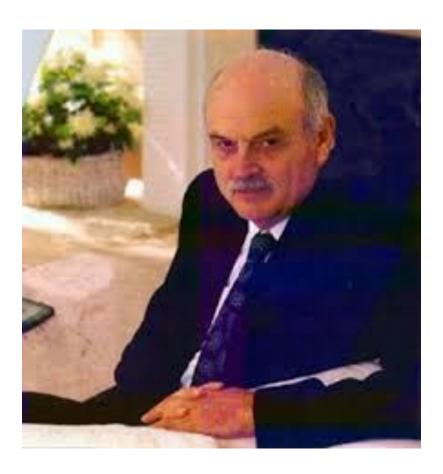

Agenda

- Relational DBs and DBMSs
- SQL and SQLite
- The SQLite command-line client
 - Fundamentals
 - Selecting data
 - Selecting data advanced
 - Changing data

- Database (DB)
 - A structured collection of persistent data
- Database management system (DBMS)
 - Software that maintains DBs
- Database administrator (DBA)
 - A person who administers DBs and DBMSs

- A good DBMS used by good DBAs can:
 - Reduce redundancy
 - Avoid inconsistencies
 - Facilitate data sharing
 - Enforce standards
 - Apply security restrictions
 - Maintain integrity
 - Balance conflicting requirements
 - Insure safety (backups)

An Introduction to Database Systems, C. J. Date

Edgar Codd

Relational DB structure:

Formally	Informally
Relations	Tables
Tuples	Rows
Attributes	Fields

BOOKS		
isbn	title	quantity
123	The Practice of Programming	500
234	The C Programming Language	800
345	Algorithms in C	650

AUTHORS		
isbn	author	
123	Kernighan	
123	Pike	
234	Kernighan	
234	Ritchie	
345	Sedgewick	

ORDERS		
isbn	custid	quantity
123	222	20
345	222	100
123	111	30

CUSTOMERS			
custid	custname	street	zipcode
111	Princeton	114 Nassau St	08540
222	Harvard	1256 Mass Ave	02138
333	MIT	292 Main St	02142

ZIPCODES			
zipcode	city	state	
08540	Princeton	NJ	
02138	Cambridge	MA	
02142	Cambridge	MA	

Agenda

- Relational DBs and DBMSs
- SQL and SQLite
- The SQLite command-line client
 - Fundamentals
 - Selecting data
 - Selecting data advanced
 - Changing data

SQL

Donald Chamberlin

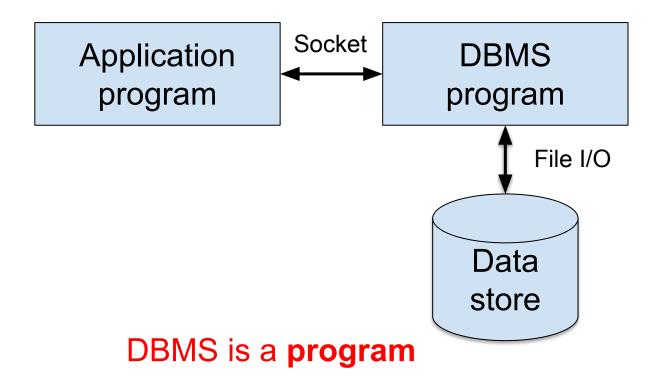

Raymond Boyce

SQLite

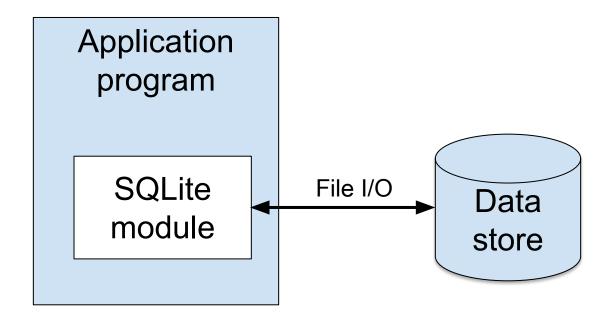

D. Richard Hipp

Architecture when using a typical DBMS:

Architecture when using SQLite:

DBMS is a module

Agenda

- Relational DBs and DBMSs
- SQL and SQLite
- The SQLite command-line client
 - Fundamentals
 - Selecting data
 - Selecting data advanced
 - Changing data

SQLite Client

Question: How does one use SQLite?

- Answer: In this course:
 - Via the SQLite command-line client
 - Via programs that you compose

SQLite Client

The sqlite3 program

```
$ sqlite3 bookstore.sqlite
SQLite version 3.45.1 2024-01-30 16:01:20
Enter ".help" for usage hints.
sqlite>
```

Give that a try.

SQLite Client

Standard SQL Statements	SQLite Statements
Do not begin with a period	Begin with a period
Contain keywords are case insensitive	Contain keywords are case sensitive
Must end with a semicolon	Need not end with a semicolon

Agenda

- Relational DBs and DBMSs
- SQL and SQLite
- The SQLite command-line client
 - Fundamentals
 - Selecting data
 - Selecting data advanced
 - Changing data

Agenda

Assumptions

- The bookstore.sqlite file already exists
- The bookstore.sqlite file contains the bookstore DB (as previously described)
 - Tables named books, authors, orders, customers, and zipcodes
- We issued this command:

```
$ sqlite3 bookstore.sqlite
SQLite version 3.45.1 2024-01-30 16:01:20
Enter ".help" for usage hints.
sqlite>
```

SQLite Client: Fundamentals

.help [-all] [pattern]

```
sqlite> .help
.help ?-all? ?PATTERN?
                         Show help text for PATTERN
.auit
                         Exit this program
.schema ?PATTERN?
                         Show the CREATE statements matching PATTERN
.tables ?TABLE?
                         List names of tables matching LIKE pattern
TABLE
sqlite> help .schema
.schema ?PATTERN?
                         Show the CREATE statements matching PATTERN
   Options:
      --indent
                           Try to pretty-print the schema
                           Omit objects whose names start with
      --nosys
"salite "
sqlite> .help -all
```

...

Give that a try.

SQLite Client: Fundamentals

.tables

```
sqlite> .tables
authors books customers orders zipcodes
sqlite>
```

.schema [table]

```
sqlite> .schema books
CREATE TABLE books (isbn TEXT, title TEXT, quantity INTEGER);
sqlite>
```

In the orders table what is the data type of the isbn field?
The custid field?
The quantity field?

SQLite Client: Fundamentals

SQLite Data Type	Python Data Type
INTEGER	int
REAL	float
TEXT	str
BLOB	bytes

Python: None

SQLite: NULL

What does
BLOB stand
for?

Agenda

- Relational DBs and DBMSs
- SQL and SQLite
- The SQLite command-line client
 - Fundamentals
 - Selecting data
 - Selecting data advanced
 - Changing data

SELECT expr, ... FROM table, ... [WHERE condition] [ORDER BY column [ASC | DESC]];

```
sqlite> SELECT * FROM books;
123|The Practice of Programming|500
234 | The C Programming Language | 800
345|Algorithms in C|650
sqlite> SELECT isbn, title FROM books;
123 | The Practice of Programming
234 | The C Programming Language
345|Algorithms in C
sqlite> SELECT * FROM books ORDER BY quantity DESC;
234 | The C Programming Language | 800
345|Algorithms in C|650
123|The Practice of Programming|500
sqlite>
```

Note: The result is a table

WHERE clauses:

```
sqlite> SELECT * FROM books WHERE quantity=650;
345|Algorithms in C|650
sqlite> SELECT * FROM books WHERE quantity>=650;
234 | The C Programming Language | 800
345|Algorithms in C|650
sqlite> SELECT * FROM orders WHERE isbn=123 AND custid=222;
123 | 222 | 20
sqlite> SELECT * FROM orders WHERE isbn=123 OR custid=222;
123 | 222 | 20
345 | 222 | 100
123 | 111 | 30
sqlite>
```

Joining tables:

```
sqlite> SELECT * from books, authors;
```

Give it a try. How many rows are in the resulting table?
(No fair looking at the next slide.)

Joining tables:

```
sqlite> SELECT * from books, authors;
123|The Practice of Programming|500|123|Kernighan
123|The Practice of Programming|500|123|Pike
123|The Practice of Programming|500|234|Kernighan
123|The Practice of Programming|500|234|Ritchie
123|The Practice of Programming|500|345|Sedgewick
234 | The C Programming Language | 800 | 123 | Kernighan
234 | The C Programming Language | 800 | 123 | Pike
234 | The C Programming Language | 800 | 234 | Kernighan
234 | The C Programming Language | 800 | 234 | Ritchie
234 | The C Programming Language | 800 | 345 | Sedgewick
345|Algorithms in C|650|123|Kernighan
                                              Which
345|Algorithms in C|650|123|Pike
345|Algorithms in C|650|234|Kernighan
                                             rows are
345|Algorithms in C|650|234|Ritchie
                                            meaningful
345|Algorithms in C|650|345|Sedgewick
                                             /useful?
sqlite>
```

27

More reasonable joining of tables:

Qualifying fields:

```
sqlite> SELECT title, quantity
FROM books, orders
WHERE books.isbn=orders.isbn;
```

What's wrong? Try
it if you want. (No
fair looking at the
next slide.)

Qualifying fields:

Joining more than 2 tables:

Joining tables with "missing rows":

Joining tables with "missing rows" (cont.):

```
123|The Practice of Programming|500|123|222|20
123|The Practice of Programming|500|345|222|100
123|The Practice of Programming|500|123|111|30
234|The C Programming Language|800|123|222|20
234|The C Programming Language|800|345|222|100
234|The C Programming Language|800|123|111|30
345|Algorithms in C|650|123|222|20
345|Algorithms in C|650|345|222|100
345|Algorithms in C|650|123|111|30
```

No row for the book with isbn 234 is in result table Beware (Assignment 1):

In reg.sqlite some courses have no professors

Agenda

- Relational DBs and DBMSs
- SQL and SQLite
- The SQLite command-line client
 - Fundamentals
 - Selecting data
 - Selecting data advanced
 - Changing data

The LIKE operator and wildcards:

```
sqlite> SELECT * FROM books WHERE title LIKE 'The%';
123|The Practice of Programming|500
234|The C Programming Language|800
sqlite> SELECT * FROM books WHERE title LIKE '%of%';
123|The Practice of Programming|500
sqlite> SELECT * FROM books WHERE title LIKE 'T_e%';
123|The Practice of Programming|500
234|The C Programming Language|800
sqlite>
```

% matches any 0 or more characters matches any 1 character

Case (in)sensitivity:

```
sqlite> SELECT * FROM authors WHERE author="Pike";
123|Pike
sqlite> SELECT * FROM authors WHERE author="pike";
sqlite> SELECT * FROM books WHERE title LIKE 't_e%';
123|The Practice of Programming|500
234|The C Programming Language|800
sqlite> PRAGMA case_sensitive_like=ON;
sqlite> SELECT * FROM books WHERE title LIKE 't_e%';
sqlite>
```

= is case sensitive
LIKE is case insensitive by default

Aside: Escape Char

C, Java, and Python define backslash as the **escape char**

Within a string literal, the char following the escape char is not a special char

"abc\"def"

The second double quote char doesn't delimit the string, but instead is an ordinary char within the string

SQL doesn't define an escape char, but...

SQLite Client: Selecting Data Adv

The ESCAPE clause for the LIKE operator

```
sqlite> SELECT * FROM books WHERE title LIKE 'The%';
123|The Practice of Programming|500
234|The C Programming Language|800
sqlite> SELECT * FROM books WHERE title LIKE 'The\%' ESCAPE '\';
```

What is the output? (No fair looking at the next slide.)

SQLite Client: Selecting Data Adv

The ESCAPE clause for the LIKE operator

```
sqlite> SELECT * FROM books WHERE title LIKE 'The\%' ESCAPE '\'; sqlite>
```

SQLite Client: Selecting Data Adv

Creating indices:

CREATE INDEX index ON table (field);

```
sqlite> CREATE INDEX books_index ON books (isbn);
sqlite> .schema books
CREATE TABLE books
(isbn TEXT, title TEXT, quantity INTEGER);
CREATE INDEX books_index ON books (isbn);
sqlite>
```

Why not create an index on every column of every table?

Agenda

- Relational DBs and DBMSs
- SQL and SQLite
- The SQLite command-line client
 - Fundamentals
 - Selecting data
 - Selecting data advanced
 - Changing data

UPDATE table SET column1=expr1 [, column2=expr2 ...]
[WHERE condition]

```
sqlite> UPDATE books SET quantity=60 WHERE isbn=123;
sqlite> SELECT * from books;
123 | The Practice of Programming | 60
234 | The C Programming Language | 800
345|Algorithms in C|650
sqlite> UPDATE books SET quantity=quantity+1 WHERE isbn=123;
sqlite> SELECT * from books;
123 | The Practice of Programming | 61
234 | The C Programming Language | 800
345|Algorithms in C|650
sqlite> UPDATE books SET quantity=500 WHERE isbn=123;
sqlite> SELECT * from books;
123 | The Practice of Programming | 500
234 | The C Programming Language | 800
345|Algorithms in C|650
sqlite>
```

```
INSERT INTO table (column, ...) VALUES (expr, ...);
```

```
sqlite> INSERT INTO books (isbn, title, quantity) VALUES
('456', 'Core Java', 120);
sqlite> SELECT * from books;
123|The Practice of Programming|500
234|The C Programming Language|800
345|Algorithms in C|650
456|Core Java|120
sqlite>
```

DELETE FROM table [WHERE condition];

DROP TABLE [IF EXISTS] table

```
sqlite> DROP TABLE books;
sqlite> .tables
authors customers orders zipcodes
sqlite>
```

CREATE TABLE [IF NOT EXISTS] table (column datatype, ...);

```
sqlite> CREATE TABLE books (isbn TEXT, title TEXT,
quantity INTEGER);
sqlite> INSERT INTO books (isbn, title, quantity)
VALUES ('123', 'The Practice of Programming', 500);
sqlite> INSERT INTO books (isbn, title, quantity)
VALUES ('234','The C Programming Language',800);
sqlite> INSERT INTO books (isbn, title, quantity)
VALUES ('345', 'Algorithms in C',650);
sqlite> SELECT * FROM books;
123|The Practice of Programming|500
234 | The C Programming Language | 800
345|Algorithms in C|650
sqlite>
```

ALTER TABLE table specification [, specification] ...;

```
sqlite> ALTER TABLE books ADD COLUMN price INTEGER;
sqlite> .schema books
CREATE TABLE books
(isbn TEXT, title TEXT, quantity INTEGER, price INTEGER);
sqlite> SELECT * FROM books;
123|The Practice of Programming|500|
234 | The C Programming Language | 800 |
345 | Algorithms in C | 650 |
                                      In that SELECT
sqlite>
                                      output, how can
                                       you tell that a
                                        column was
                                          added?
```

```
sqlite> ALTER TABLE books DELETE COLUMN price;
Error: near "DELETE": syntax error
sqlite>
```

```
sqlite> ALTER TABLE books RENAME TO books2;
sqlite> CREATE TABLE books (isbn TEXT, title TEXT, quantity
INTEGER);
sqlite> INSERT INTO books (isbn, title, quantity) SELECT isbn,
title, quantity from books2;
sqlite> DROP TABLE books2;
sqlite> .schema books
CREATE TABLE books
(isbn TEXT, title TEXT, quantity INTEGER);
sqlite>
```

.quit

```
sqlite> .quit
$
```

- Question: How does one use SQLite?
- Answer: In this course:
 - Via the SQLite command-line client
 - Via programs that you compose...

Lecture Summary

- In this lecture we covered:
 - Relational DBs and DBMSs
 - SQL and SQLite
 - The SQLite command-line client
- See also:
 - Appendix 1: SQL Client: Reading & Writing
 - Appendix 2: Fancy SQL Joins

Appendix 1: SQL Client: Reading & Writing

To read SQL statements from a text file:

```
$ cat bookstore.sql
CREATE TABLE books
(isbn TEXT, title TEXT, quantity INTEGER);
INSERT INTO books (isbn, title, quantity)
  VALUES ('123', 'The Practice of Programming', 500);
INSERT INTO books (isbn, title, quantity)
  VALUES ('234', 'The C Programming Language', 800);
INSERT INTO books (isbn, title, quantity)
  VALUES ('345', 'Algorithms in C', 650);
CREATE TABLE authors (isbn TEXT, author TEXT);
```

To read SQL statements from a text file (cont.):

```
$ sqlite3 bookstore.sqlite
sqlite> .read bookstore.sql
sqlite> .quit
$
```

To write SQL statements to a text file:

```
$ sqlite3 bookstore.sqlite
sqlite> .output bookstorebackup.sql
sqlite> .dump
sqlite> .quit
$
```

Resulting file:

```
$ cat bookstorebackup.sql
...
CREATE TABLE books (isbn TEXT, title TEXT, quantity INTEGER);
INSERT INTO books VALUES('123','The Practice of Programming',500);
INSERT INTO books VALUES('234','The C Programming Language',800);
INSERT INTO books VALUES('345','Algorithms in C',650);
CREATE TABLE authors (isbn TEXT, author TEXT);
...
$
```

Appendix 2: Fancy SQL Joins

Recall:

```
sqlite> SELECT * FROM books;
123|The Practice of Programming|500
234|The C Programming Language|800
345|Algorithms in C|650
sqlite>
```

```
sqlite> SELECT * FROM orders;
123|222|20
345|222|100
123|111|30
sqlite>
```

```
sqlite> SELECT * FROM books, orders;
123|The Practice of Programming|500|123|222|20
123|The Practice of Programming|500|345|222|100
123|The Practice of Programming|500|123|111|30
234|The C Programming Language|800|123|222|20
234|The C Programming Language|800|345|222|100
234|The C Programming Language|800|123|111|30
345|Algorithms in C|650|123|222|20
345|Algorithms in C|650|345|222|100
345|Algorithms in C|650|123|111|30
sqlite>
```

Cartesian product

Ordinary SQL join

```
sqlite> SELECT * FROM books, orders WHERE
books.isbn=orders.isbn;
123|The Practice of Programming|500|123|111|30
123|The Practice of Programming|500|123|222|20
345|Algorithms in C|650|345|222|100
sqlite>
```

Conceptually, to compute result table:

Compute Cartesian product of books and orders

Retain only those rows in which books.isbn = orders.isbn

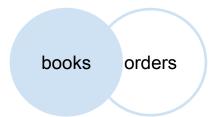

Inner join

```
sqlite> SELECT * FROM books INNER JOIN orders
ON books.isbn=orders.isbn;
123|The Practice of Programming|500|123|111|30
123|The Practice of Programming|500|123|222|20
345|Algorithms in C|650|345|222|100
sqlite>
```

Same as ordinary join

Note: No row for book with isbn 234 is present

Left outer join

```
sqlite> SELECT * FROM books LEFT OUTER JOIN
orders ON books.isbn=orders.isbn;
123|The Practice of Programming|500|123|111|30
123|The Practice of Programming|500|123|222|20
234|The C Programming Language|800|||
345|Algorithms in C|650|345|222|100
sqlite>
```

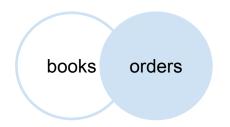

Conceptually, to compute result table:

Compute inner join

Add each book row that is missing, padded with NULL fields

Right outer join

```
SELECT * from books
RIGHT OUTER JOIN orders
ON books.isbn = orders.isbn;
```

Conceptually, to compute result table:

Compute inner join

Add each orders row that is missing, padded with NULL fields

Not supported by SQLite

But could use left outer join with tables switched!

Full outer join

```
SELECT * from books
FULL OUTER JOIN orders
ON books.isbn = orders.isbn;
```

books orders

Conceptually, to compute result table:

Compute inner join

Add each book row that is missing,
padded with NULL fields

Add each orders row that is missing,
padded with NULL fields

Not supported by SQLite

Note:

- COS 333 assignments do not require outer joins
- Your COS 333 project probably will not require outer joins
- But understanding outer joins may help you to understand inner joins more deeply
