COS 341, November 18, 1998 Due: November 25, 1998

Homework Set 6

Reading Assignments Read Chapter 11.

Written Assignments Do exercises 7, 15(a)(e), 17, and 33 in Section 7.8.

Special Problem 1 (to be counted as 2 exercise) Do exercise 34 in Section 7.8.

Special Problem 2 (to be counted as 1 exercise) Let n > 1 be any integer. The road map of a certain town forms a $2 \times n$ grid (two East-West streets of length (n - 1) each, and n North-South streets of length 1 each). All the roads are two-way. If you want to go from the south-west corner point Q to the north-east corner point W, how many different routes can you take without traversing the same segment twice? Give your answer as a closed-form expression of n.

Remarks Let g(n) be this number. Then g(2) = 2, g(3) = 4.

Special Problem 3 (counted as 1 exercise) Solve the following recurrence relation: $d_0 = d_1 = 1$, and for n > 1,

$$d_n = \frac{d_{n-1}d_{n-2}}{6d_{n-1} + d_{n-2}}.$$
