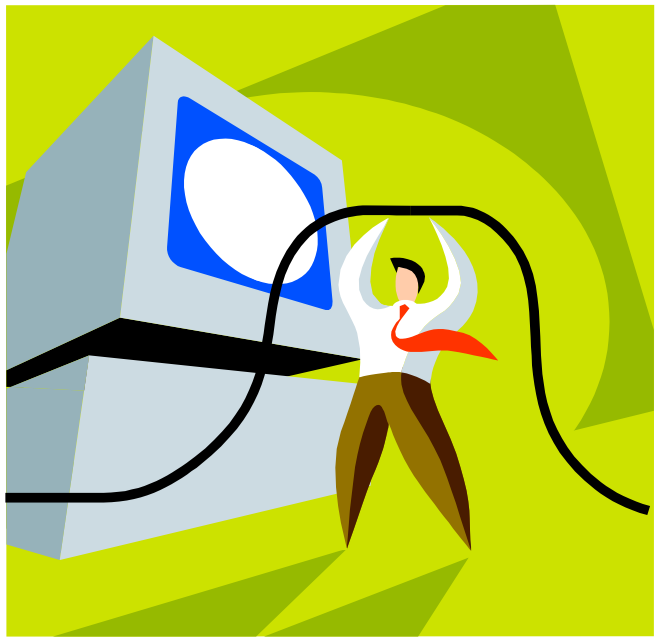
COS 217: Introduction to Programming Systems

Jennifer Rexford

Goals for Today's Class



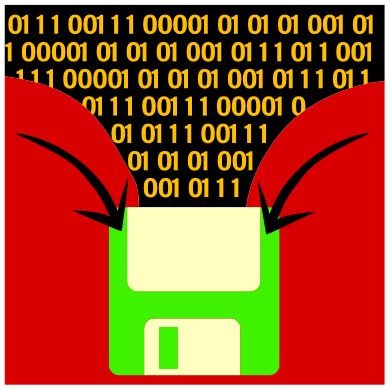
- Course overview
  - Introductions
  - Course goals
  - Resources
  - Grading
  - Policies
- Getting started with C
  - C programming language overview

Introductions

- Lectures
  - Jennifer Rexford (Professor)
    - jrex@cs.princeton.edu
- Preceptors
  - Christopher Moretti (Lead Preceptor)
    - cmoretti@cs.princeton.edu
  - Sibren Isaacman
    - isaacman@princeton.edu

Course Goal 1: "Programming in the Large"

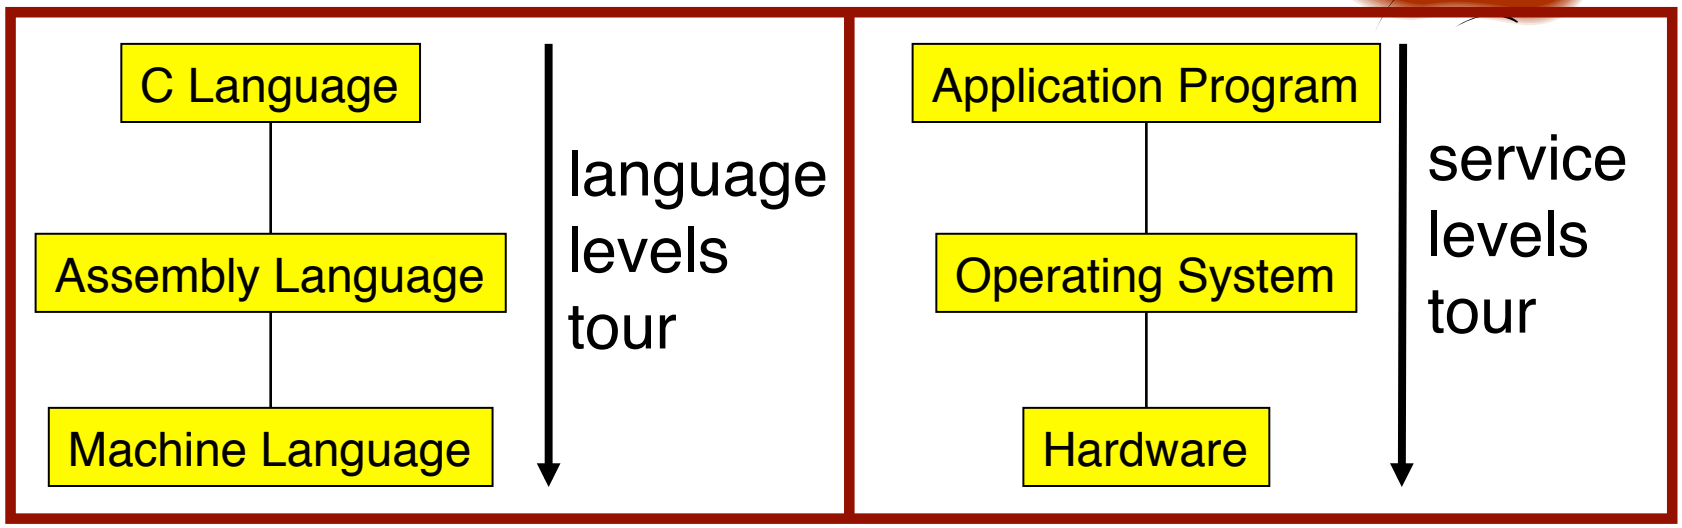
- Help you learn how to write large computer programs



- Specifically:
  - Write modular code
  - Write portable code
  - Test and debug your code
  - Improve your code's performance (and when to do so)
  - Use tools to support those activities

Course Goal 2: "Under the Hood"

- Help you learn what happens "under the hood" of computer systems
- Two downward tours



- Goal 2 supports Goal 1
  - Reveals many examples of effective abstractions

Course Goals: Why C Instead of Java?

- A: C supports Goal 1 better
  - C is a lower-level language
    - C provides more opportunities to create abstractions
  - C has some flaws
    - C's flaws motivate discussions of software engineering principles
- A: C supports Goal 2 better
  - C facilitates language levels tour
    - C is closely related to assembly language
  - C facilitates service levels tour
    - Linux is written in C

Course Goals: Why Linux?

- A: Linux is good for education and research
  - Linux is open-source and well-specified
- A: Linux is good for programming
  - Linux is a variant of Unix
  - Unix has GNU, a rich open-source programming environment

Course Goals: Summary

- Help you to become a...

Power Programmer!!!

Resources: Lectures and Precepts

- Lectures
  - Describe concepts at a high level
  - Slides available online at course Web site
- Precepts
  - Support lectures by describing concepts at a lower level
  - Support your work on assignments
- Note: Precepts begin on Monday (i.e., today)
  - P01: MW 1:30-2:20pm, in CS 102
  - P02: TTh 1:30-2:20pm, in CS 102
  - P03: TTh 7:30-8:20pm, in CS 102

Resources: Website and Piazzza

- Website
  - Access from http://www.cs.princeton.edu
    - Academics → Course Schedule → COS 217
- Discussion forum
  - Piazzza: http://www.piazzza.com
  - "Join or create your class now"
    - School: Princeton University
    - Class: COS 217
    - Fill in your Princeton e-mail address
  - Click "get started" link in your email to activate
    - Please use your real name when signing up

Resources: Books

- Required book
  - *C Programming: A Modern Approach (Second Edition),* King, 2008.
    - Covers the C programming language and standard libraries
- Highly recommended books
  - *The Practice of Programming,* Kernighan and Pike, 1999.
    - Covers "programming in the large" (required for COS 333)
  - *Computer Systems: A Programmer's Perspective (Second Edition)*, Bryant and O'Hallaron, 2010.
    - Covers "under the hood," key sections are on e-reserve
    - First edition is sufficient
  - *Programming with GNU Software*, Loukides and Oram, 1997.
    - Covers tools
- *All books are on reserve in Engineering Library*

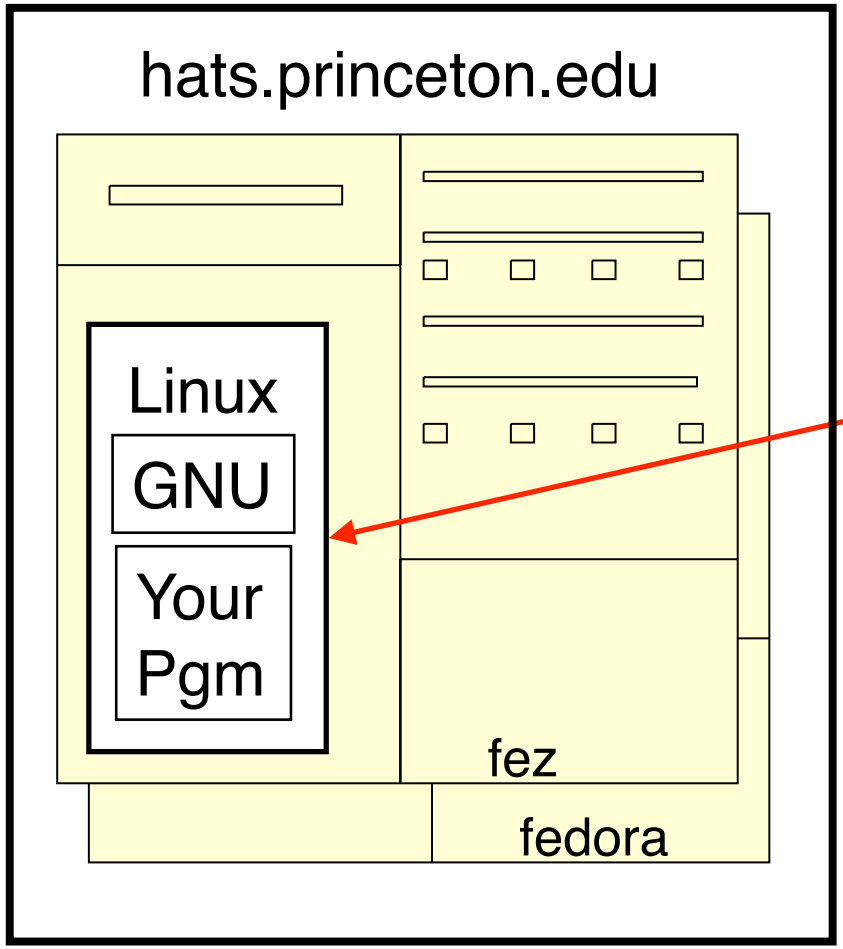
Resources: Manuals

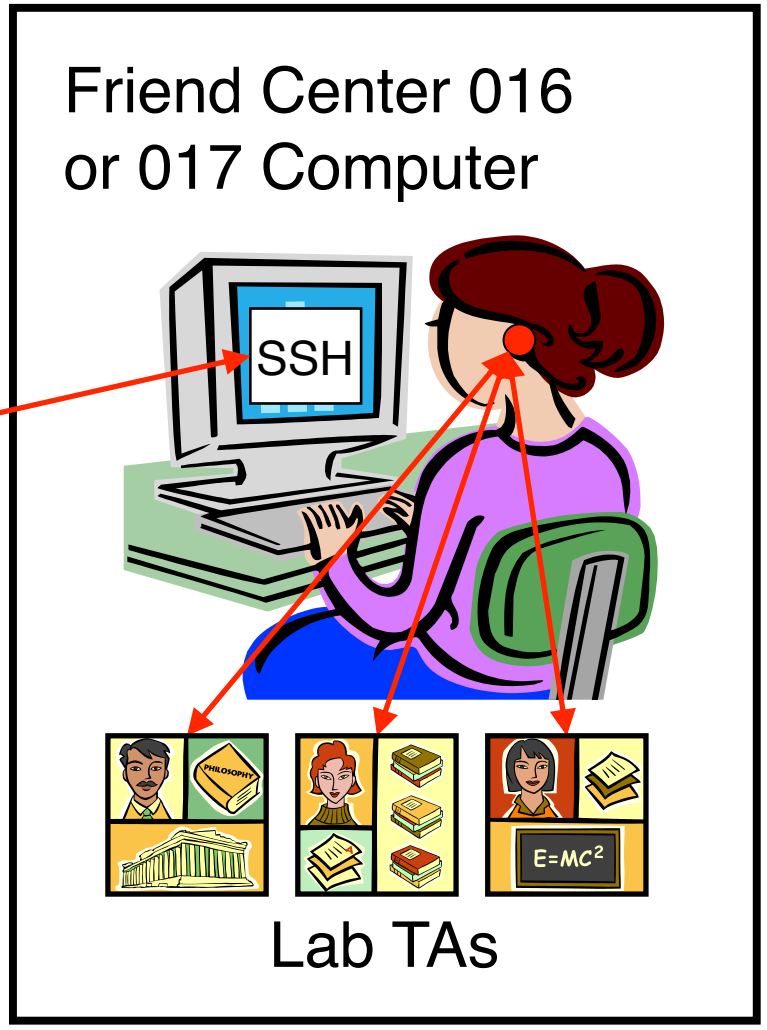
- Manuals (for reference only, available online)
  - *IA32 Intel Architecture Software Developer's Manual, Volumes 1-3*
  - *Tool Interface Standard & Executable and Linking Format*
  - *Using as, the GNU Assembler*

- See also
  - Linux **`man`** command
    - **`man`** is short for “manual”
    - For more help, type **`man man`**

Resources: Programming Environment

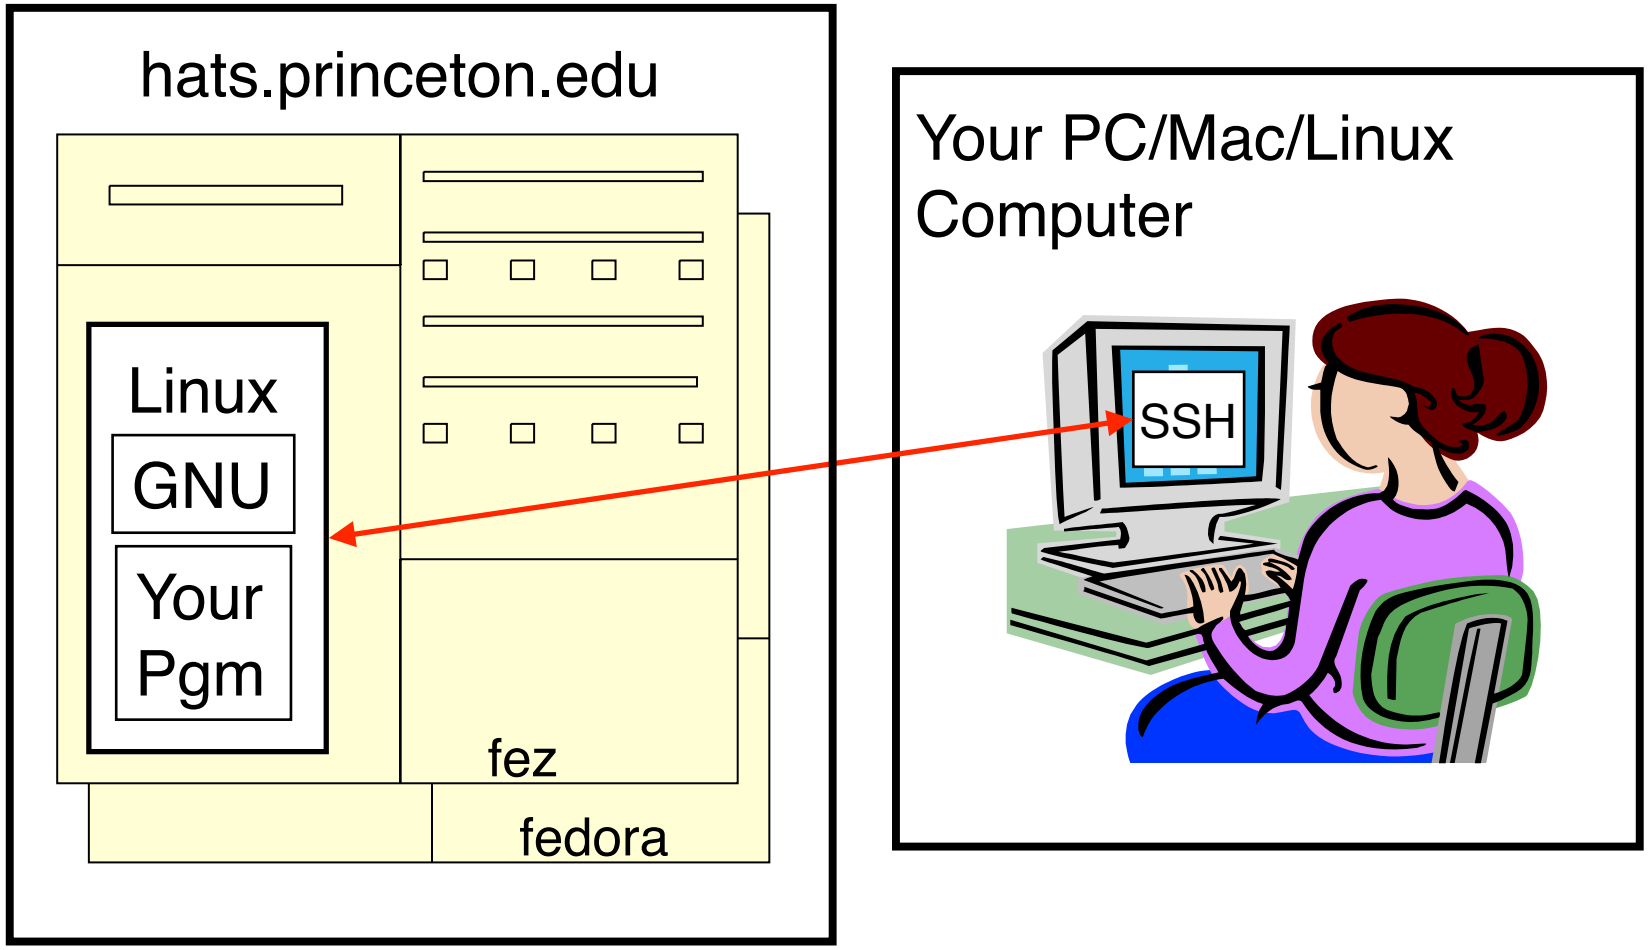
- Option 1





Resources: Programming Environment

- Option 2

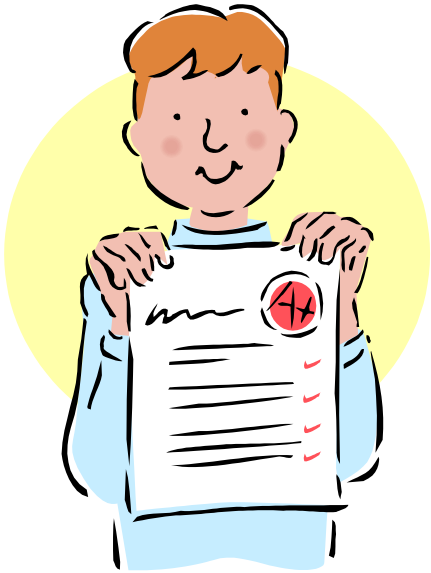


Resources: Programming Environment

- Other options
  - Use your own PC/Mac/Linux computer; run GNU tools locally; run your programs locally
  - Use your own PC/Mac/Linux computer; run a non-GNU development environment locally; run programs locally
- Notes
  - Other options cannot be used for some assignments (esp. timing studies)
  - Instructors cannot promise support of other options
  - Strong recommendation: Use Option 1 or 2 for **all** assignments
  - First precept provides setup instructions

Grading

- Seven programming assignments (50%)
  - Working code
  - Clean, readable, maintainable code
  - On time (penalties for late submission)
  - Final assignment counts double (12.5%)
- Exams (40%)
  - Midterm (15%)
  - Final (25%)
- Class participation (10%)
  - Lecture and precept attendance is ***mandatory***



Programming Assignments

- Programming assignments
  1. A “de-comment” program
  2. A string module
  3. A symbol table module
  4. IA-32 assembly language programs
  5. A buffer overrun attack
  6. A heap manager module
  7. A Unix shell
- See course “Schedule” web page for due dates/times
- Advice: Start early to allow time for debugging (especially in the background while you are doing other things!)…

Why Debugging is Necessary…

Policies

Study the course "Policies" web page!!!

- Especially the assignment collaboration policies
  - Violation involves **trial by Committee on Discipline**
  - Typical penalty is **suspension from University** for 1 academic year
- Some highlights:
  - Don't view anyone else's work during, before, or after the assignment time period
  - Don't allow anyone to view your work during, before, or after the assignment time period
  - In your assignment "readme" file, acknowledge all resources used
- Ask your preceptor for clarifications if necessary

Course Schedule

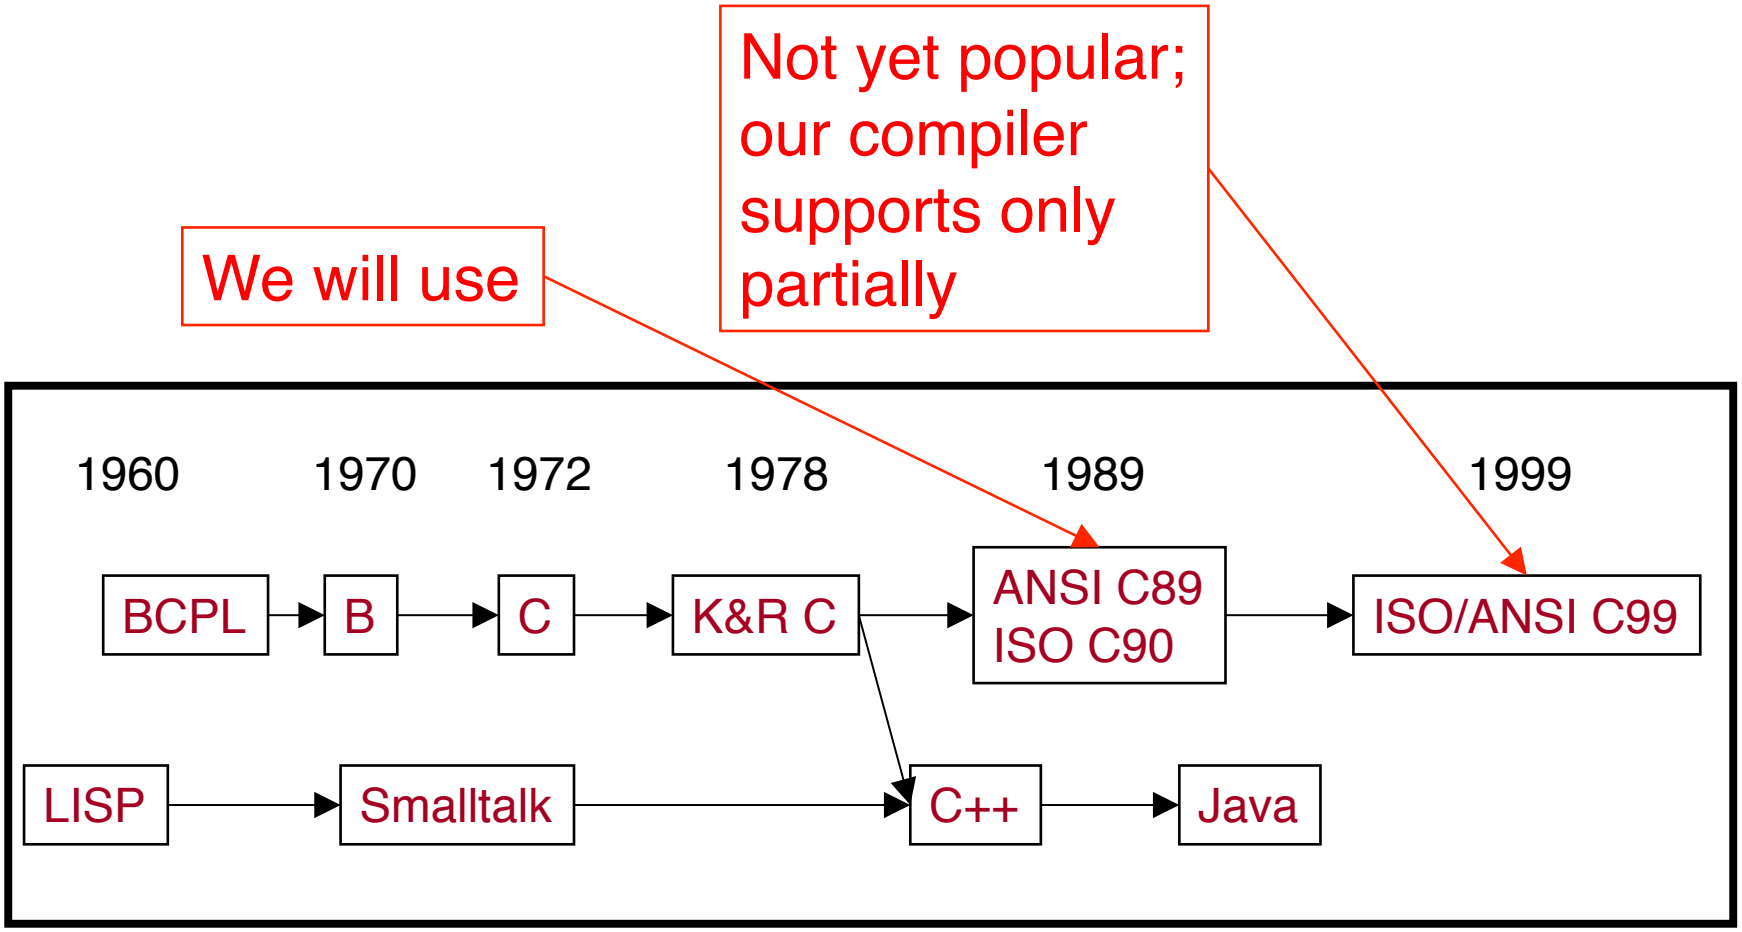
- Very generally…

Weeks	Lectures	Precepts
1-2	Intro to C (conceptual)	Intro to Linux/GNU Intro to C (mechanical)
3-6	"Pgmming in the Large"	Advanced C
6	Midterm Exam	
7	Recess	
8-13	"Under the Hood"	Assembly Language Pgmming Assignments
	Reading Period	
	Final Exam	

- See course "Schedule" web page for details

Any questions before we start?

C vs. Java: History



C vs. Java: Design Goals

- Java design goals
  - Support object-oriented programming
  - Allow same program runs on multiple operating systems
  - Support using computer networks
  - Execute code from remote sources securely
  - Adopt the good parts of other languages
- Implications for Java
  - Good for application-level programming
  - High-level (insulates from assembly language, hardware)
  - Portability over efficiency
  - Security over efficiency
  - Security over flexibility

C vs. Java: Design Goals

- C design goals
  - Support structured programming
  - Support development of the Unix OS and Unix tools
    - As Unix became popular, so did C
- Implications for C
  - Good for system-level programming
  - Low-level
  - Efficiency over portability
  - Efficiency over security
  - Flexibility over security

C vs. Java: Design Goals

- Differences in design goals explain many differences between the languages
- C's design goal explains many of its eccentricities
  - We'll see examples throughout the course

C vs. Java: Overview

- Dennis Ritchie on the nature of C:

  - "C has always been a language that never attempts to tie a programmer down."
  - "C has always appealed to systems programmers who like the terse, concise manner in which powerful expressions can be coded."
  - "C allowed programmers to (while sacrificing portability) have direct access to many machine-level features that would otherwise require the use of assembly language."
  - "C is quirky, flawed, and an enormous success. While accidents of history surely helped, it evidently satisfied a need for a system implementation language efficient enough to displace assembly language, yet sufficiently abstract and fluent to describe algorithms and interactions in a wide variety of environments."

C vs. Java: Overview (cont.)

- Bad things you **can** do in C that you **can't** do in Java
  - Shoot yourself in the foot (safety)
  - Shoot others in the foot (security)
  - Ignore wounds (error handling)
- Dangerous things you **must** do in C that you **don't** in Java
  - Explicitly manage memory via `malloc()` and `free()`
- Good things you **can** do in C, but (more or less) **must** do in Java
  - Program using the object-oriented style
- Good things you **can't** do in C but **can** do in Java
  - Write completely portable code

C vs. Java: Details

- Remaining slides provide some details
  - Suggestion: Use for future reference

- Slides covered briefly now, as time allows…

C vs. Java: Details (cont.)

	Java	C

Overall Program Structure	**Hello.java:**
	`public class Hello {`
	`  public static void`
	`  main(String[] args) {`
	`  System.out.println(`
	`  "Hello, world");`
	`  }`
	`}`
		hello.c:
		`#include <stdio.h>`
		`int main(void) {`
		`  printf("Hello, world\n");`
		`  return 0;`
		`}`

Building	`% javac Hello.java`
	`% ls`
	`Hello.class`
	`Hello.java`
	`%`
		`% gcc217 hello.c`
		`% ls`
		`a.out`
		`hello.c`
		`%`

Running	`% java Hello`
	`Hello, world`
	`%`
		`% a.out`
		`Hello, world`
		`%`

C vs. Java: Details (cont.)

	Java	C
Character type	`char // 16-bit unicode`	`char /* 8 bits */`

Integral types	`byte // 8 bits`
	`short // 16 bits`
	`int // 32 bits`
	`long // 64 bits`
		`(unsigned) char`
		`(unsigned) short`
		`(unsigned) int`
		`(unsigned) long`

Floating point types	`float // 32 bits`
	`double // 64 bits`
		`float`
		`double`
		`long double`

Logical type	`boolean`	`/* no equivalent */` `/* use integral type */`
Generic pointer type	`// no equivalent`	`void*`

Constants	`final int MAX = 1000;`	`#define MAX 1000`
		`const int MAX = 1000;`
		`enum {MAX = 1000};`

C vs. Java: Details (cont.)

	Java	C

Arrays	`int [] a = new int [10];`
	`float [][] b =`
	`  new float [5][20];`
		`int a[10];`
		`float b[5][20];`

Array bound checking	`// run-time check`	`/* no run-time check */`
Pointer type	`// Object reference is an` `// implicit pointer`	`int *p;`

Record type	`class Mine {`
	`  int x;`
	`  float y;`
	`}`
		`struct Mine {`
		`  int x;`
		`  float y;`
		`}`

C vs. Java: Details (cont.)

	Java	C

Strings	`String s1 = "Hello";`
	`String s2 = new String("hello");`
		`char *s1 = "Hello";`
		`char s2[6];`
		`strcpy(s2, "hello");`

String concatenation	`s1 + s2` `s1 += s2`	`#include <string.h>` `strcat(s1, s2);`
Logical ops	`&&, ||, !`	`&&, ||, !`
Relational ops	`=, !=, >, <, >=, <=`	`=, !=, >, <, >=, <=`
Arithmetic ops	`+, -, *, /, %, unary -`	`+, -, *, /, %, unary -`
Bitwise ops	`>>, <<, >>>, &, |, ^`	`>>, <<, &, |, ^`
Assignment ops	`=, *=, /=, +=, -=, <<=, >>=, >>>=, =, ^=, |=, %=`	`=, *=, /=, +=, -=, <<=, >>=, =, ^=, |=, %=`

C vs. Java: Details (cont.)

	Java	C

if stmt	`if (i < 0)`
	`  statement1;`
	`else`
	`  statement2;`
		`if (i < 0)`
		`  statement1;`
		`else`
		`  statement2;`

switch stmt	`switch (i) {`
	`  case 1:`
	`  ...`
	`  break;`
	`  case 2:`
	`  ...`
	`  break;`
	`  default:`
	`  ...`
	`}`
		`switch (i) {`
		`  case 1:`
		`  ...`
		`  break;`
		`  case 2:`
		`  ...`
		`  break;`
		`  default:`
		`  ...`
		`}`

goto stmt	`// no equivalent`	`goto SomeLabel;`

C vs. Java: Details (cont.)

	Java	C

for stmt	`for (int i=0; i<10; i++)`
	`  statement;`
		`int i;`
		`for (i=0; i<10; i++)`
		`  statement;`

while stmt	`while (i < 0)` `  statement;`	`while (i < 0)` `  statement;`

do-while stmt	`do {`
	`  statement;`
	`  …`
	`} while (i < 0)`
		`do {`
		`  statement;`
		`  …`
		`} while (i < 0);`

continue stmt	`continue;`	`continue;`
labeled continue stmt	`continue SomeLabel;`	`/* no equivalent */`
break stmt	`break;`	`break;`
labeled break stmt	`break SomeLabel;`	`/* no equivalent */`

C vs. Java: Details (cont.)

	Java	C
return stmt	`return 5;` `return;`	`return 5;` `return;`

Compound stmt (alias block)	`{`
	`  statement1;`
	`  statement2;`
	`}`
		`{`
		`  statement1;`
		`  statement2;`
		`}`

Exceptions	`throw, try-catch-finally`	`/* no equivalent */`
Comments	`/* comment */` `// another kind`	`/* comment */`

Method / function call	`f(x, y, z);`
	`someObject.f(x, y, z);`
	`SomeClass.f(x, y, z);`
		`f(x, y, z);`

Example C Program

```
#include <stdio.h>
#include <stdlib.h>

const double KMETERS_PER_MILE = 1.609;

int main(void) {
   int miles;
   double kmeters;
   printf("miles: ");
   if (scanf("%d", &miles) != 1) {
      fprintf(stderr, "Error: Expect a number.\n");
      exit(EXIT_FAILURE);
   }
   kmeters = miles * KMETERS_PER_MILE;
   printf("%d miles is %f kilometers.\n",
      miles, kmeters);
   return 0;
}
```

Conclusions

- Getting started with C
  - C was designed for system programming
    - Different design goals from of Java
    - Explains many of C's eccentricities
  - Knowing Java gives you a head start at learning C
    - C is not object-oriented, but many aspects are similar
- Getting started in the course
  - Check out course Web site **soon**
    - Study "Policies" page
    - First assignment
  - Establish a reasonable computing environment **soon**
    - Instructions given in first precept

Getting Started

- Check out course Web site **soon**
  - Study “Policies” page
  - First assignment is available

- Establish a reasonable computing environment **soon**
  - Instructions given in first precept
