Data Structures

"Every program depends on algorithms and data structures, but few programs depend on the invention of brand new ones."

-- Kernighan & Pike

1

Goals of this Lecture

Help you learn (or refresh your memory) about:
- Common data structures: linked lists and hash tables

Why? Deep motivation:
- Common data structures serve as "high level building blocks"
- A mature programmer:
  - Rarely creates programs from scratch
  - Often creates programs using high level building blocks

Why? Shallow motivation:
- Provide background pertinent to Assignment 3
- … especially for those who haven't taken COS 226
- … especially for those who skipped COS 126

2

Symbol Table API

Goal: maintain a collection of key/value pairs
- For now, each key is a **string**; each value is an **int**
- Lookup by key, get value back
- Unknown number of key-value pairs

Examples
- (student name, class year)
  - ("Andrew Appel", 81), ("Jen Rexford", 91), ("JP Singh", 87)
- (baseball player, number)
  - ("Ruth", 3), ("Gehrig", 4), ("Mantle", 7)
- (variable name, value)
  - ("maxLength", 2000), ("i", 7), ("j", -10)

3

Agenda

Linked lists

Hash tables
Hash table issues

4

Linked List Data Structure

```
struct Node
{  const char *key;
   int value;
   struct Node *next;
};

struct List
{  struct Node *first;
};
```

Your Assignment 3 data structures will be more elaborate

Really this is the address at which "Ruth" resides

struct List   struct Node   struct Node

"Gehrig"   4

"Ruth"   3   NULL

5

Linked List Data Structure

Really this is the address at which "Ruth" resides

struct List   struct Node   struct Node

?Gehrig\0?   ?Ruth\0??

4   3   NULL

6

Accessing a Linked List

```
struct Node
{   const char *key;
    int value;
    struct Node *next;
};

struct List
{   struct Node *first;
};
```

```
struct List lineup;
struct Node g;
struct Node* r = malloc(…);
g.key = "Gehrig";
lineup.first = &g;
(*lineup.first).value = 4;
lineup.first->value = 4;
(*lineup.first).next = r;
lineup.first->next = r;
```

struct List   struct Node   struct Node

```
"Gehrig"    "Ruth"
   4           3
            NULL
```

7

Linked List Algorithms

Create
- Allocate **List** structure; set **first** to **NULL**
- Performance: O(1) ⇒ fast

Add (no check for duplicate key required)
- Insert new node containing key/value pair at front of list
- Performance: O(1) ⇒ fast

Add (check for duplicate key required)
- Traverse list to check for node with duplicate key
- Insert new node containing key/value pair into list
- Performance: O(n) ⇒ slow

8

Linked List Algorithms

Search
- Traverse the list, looking for given key
- Stop when key found, or reach end
- Performance: ???

9

▷ iClicker Question

Q: How fast is searching for a key in a linked list?

A. Always fast – O(1)

B. Always slow – O(n)

C. On average, fast

D. On average, slow

10

Linked List Algorithms

Search
- Traverse the list, looking for given key
- Stop when key found, or reach end
- Performance: O(n) ⇒ slow

Free
- Free **Node** structures while traversing
- Free **List** structure
- Performance: O(n) ⇒ slow

11

Agenda

Linked lists

Hash tables

Hash table issues
12

•2

Hash Table Data Structure

Array of linked lists

```
enum {BUCKET_COUNT = 1024};

struct Binding
{  const char *key;
   int value;
   struct Binding *next;
};

struct Table
{  struct Binding *buckets[BUCKET_COUNT];
};
```
Really this is the address at which "Ruth" resides

struct Table

struct Binding

struct Binding

0	NULL
1	NULL
23	
723	
806	NULL
1023	NULL

"Ruth" 3 NULL

"Gehrig" 4 NULL

Your Assignment 3 data structures will be more elaborate

13

13

Hash Table Data Structure

Hash function maps given key to an integer

Mod integer by `BUCKET_COUNT` to determine proper bucket

14

14

Hash Table Example

Example: `BUCKET_COUNT` = 7

Add (if not already present) bindings with these keys:

- the, cat, in, the, hat

15

15

Hash Table Example (cont.)

First key: "the"
- hash("the") = 965156977; 965156977 % 7 = 1

Search `buckets[1]` for binding with key "the"; not found

16

16

Hash Table Example (cont.)

Add binding with key "the" and its value to `buckets[1]`

17

17

Hash Table Example (cont.)

Second key: "cat"
- hash("cat") = 3895848756; 3895848756 % 7 = 2
Search `buckets[2]` for binding with key "cat"; not found

18

18

Hash Table Example (cont.)
Add binding with key "cat" and its value to `buckets[2]`

```
0
1 → the
2
3    cat
4
5
6
```

19

Hash Table Example (cont.)

Third key: "in"
- hash("in") = 6888005; 6888005% 7 = 5

Search `buckets[5]` for binding with key "in"; not found

```
0
1 → the
2
3    cat
4
5
6
```
20

Hash Table Example (cont.)

Add binding with key "in" and its value to `buckets[5]`

```
0
1 → the
2
3    cat
4
5 → in
6
```

21

Hash Table Example (cont.)
Fourth word: "the"
- hash("the") = 965156977; 965156977 % 7 = 1

Search `buckets[1]` for binding with key "the"; found it!
- Don't change hash table

```
0
1 → the
2
3    cat
4
5 → in
6
```

22

**Hash Table Example (cont.)**

Fifth key: "hat"
- hash("hat") = 865559739; 865559739 % 7 = 2

Search `buckets[2]` for binding with key "hat"; not found

```
0
1 → the
2
3    cat
4
5 → in
6
```
23

Hash Table Example (cont.)

Add binding with key "hat" and its value to `buckets[2]`
- At front or back?

```
0
1 → the
2
3    hat → cat
4
5 → in
6
```

24

Hash Table Algorithms

Create
- Allocate `Table` structure; set each bucket to `NULL`
- Performance: O(1) ⇒ fast

Add
- Hash the given key
- Mod by `BUCKET_COUNT` to determine proper bucket
- Traverse proper bucket to make sure no duplicate key
- Insert new binding containing key/value pair into proper bucket
- Performance: ???

25

25

▷ iClicker Question

Q: How fast is adding a key to a hash table?

A. Always fast

B. Usually fast, but depends on how many keys are in the table

C. Usually fast, but depends on how many keys hash to the same bucket

D. Usually slow

E. Always slow

26

26

Hash Table Algorithms

Search
- Hash the given key
- Mod by `BUCKET_COUNT` to determine proper bucket
- Traverse proper bucket, looking for binding with given key
- Stop when key found, or reach end
- Performance: Usually O(1) ⇒ fast

Free
- Traverse each bucket, freeing bindings
- Free `Table` structure
- Performance: O(n) ⇒ slow

27

27

Agenda

Linked lists

Hash tables

Hash table issues

28

28

How Many Buckets?

Many!
- Too few ⇒ large buckets ⇒ slow add, slow search

But not too many!
- Too many ⇒ memory is wasted

This is OK:
29

29

## What Hash Function?

Should distribute bindings across the buckets well
- Distribute bindings over the range `0`, `1`, …, `BUCKET_COUNT-1`
- Distribute bindings *evenly* to avoid very long buckets

This is not so good:

What would be the worst possible hash function?

30

30

How to Hash Strings?

Simple hash schemes don't distribute the keys evenly
- Number of characters, mod **BUCKET_COUNT**
- Sum the numeric codes of all characters, mod **BUCKET_COUNT**
- …

A reasonably good hash function:
- Weighted sum of characters s_i in the string **s**
  - **(Σ $a^i s_i$) mod BUCKET_COUNT**
- Best if **a** and **BUCKET_COUNT** are relatively prime
  - E.g., **a** = 65599, **BUCKET_COUNT** = 1024

31

31

How to Hash Strings?

A bit of math, and translation to code, yields:

```
size_t hash(const char *s, size_t bucketCount)
{  size_t i;
   size_t h = 0;
   for (i=0; s[i]!='\0'; i++)
      h = h * 65599 + (size_t)s[i];
   return h % bucketCount;
}
```

32

32

How to Protect Keys?

Suppose **Table_add()** function contains this code:

```
void Table_add(struct Table *t, const char *key, int value)
{ …
   struct Binding *p =
      (struct Binding*)malloc(sizeof(struct Binding));
   p->key = key;
   …
}
```

33

33

How to Protect Keys?

Problem: Consider this calling code:

```
struct Table *t;
char k[100] = "Ruth";
…
Table_add(t, k, 3);
```

k **Ruth\0**

t

34

34

How to Protect Keys?

Problem: Consider this calling code:

```
struct Table *t;
char k[100] = "Ruth";
…
Table_add(t, k, 3);
strcpy(k, "Gehrig");
```

k **Gehrig\0**

k is REALLY &k[0]!

What happens if the client searches t for "Ruth"? For Gehrig?

t

35

35

How to Protect Keys?

Solution: **Table_add()** saves a **defensive copy** of the given key

```
void Table_add(struct Table *t, const char *key, int value)
{ …
   struct Binding *p =
      (struct Binding*)malloc(sizeof(struct Binding));
   p->key = (const char*)malloc(strlen(key) + 1);
   strcpy((char*)p->key, key);
   …
}
```

Why add 1?

36

36

How to Protect Keys?

Now consider same calling code:

```
struct Table *t;
char k[100] = "Ruth";
…
Table_add(t, k, 3);
```

k `Ruth\0`

`Ruth\0`

|	
0	N
1	
23	
723	
806	
1023	

t

`3`
`NULL`

37

How to Protect Keys?

Now consider same calling code:

```
struct Table *t;
char k[100] = "Ruth";
…
Table_add(t, k, 3);
strcpy(k, "Gehrig");
```

k `Gehrig\0`

`Ruth\0`

Hash table is
not corrupted

0	N
1	
23	
723	
806	
1023	

t

`3`
`NULL`
38

Who Owns the Keys?

Then the hash table **owns** its keys
  • That is, the hash table owns the memory in which its keys reside
  • **Hash_free()** function must free the memory in which the key resides

39

Summary

Common data structures and associated algorithms
  • Linked list
    • (Maybe) fast add
    • Slow search
  • Hash table
    • (Potentially) fast add
    • (Potentially) fast search
    • Very common

Hash table issues
  • Hashing algorithms
  • Defensive copies
  • Key ownership

40

Princeton University
Computer Science 217: Introduction to Programming Systems

Debugging (Part 2)

41

Agenda

(9) Look for common DMM bugs

(10) Diagnose seg faults using gdb

(11) Manually inspect malloc calls

(12) Hard-code malloc calls

(13) Comment-out free calls

(14) Use Meminfo

(15) Use Valgrind

42

Look for Common DMM Bugs

Some of our favorites:

```
int *p; /* value of p undefined */
…
*p = somevalue;
```

```
char *p; /* value of p undefined */
…
fgets(p, 1024, stdin);
```

```
int *p;
…
p = (int*)malloc(sizeof(int));
…
*p = 5;
…
free(p);
…
*p = 6;
```

What are the errors?

43

Look for Common DMM Bugs

Some of our favorites:

```
int *p;
…
p = (int*)malloc(sizeof(int));
…
*p = 5;
…
p = (int*)malloc(sizeof(int));
```

```
int *p;
…
p = (int*)malloc(sizeof(int));
…
*p = 5;
…
free(p);
…
free(p);
```

What are the errors?

44

Agenda

(9) Look for common DMM bugs

(10) Diagnose seg faults using gdb

(11) Manually inspect malloc calls

(12) Hard-code malloc calls

(13) Comment-out free calls

(14) Use Meminfo

(15) Use Valgrind

45

Diagnose Seg Faults Using GDB

Segmentation fault => make it happen in gdb
- Then issue the gdb `where` command
- Output will lead you to the line that caused the fault
  - But that line may not be where the error resides!

46

Agenda

(9) Look for common DMM bugs

(10) Diagnose seg faults using gdb

(11) Manually inspect malloc calls

(12) Hard-code malloc calls

(13) Comment-out free calls

(14) Use Meminfo

(15) Use Valgrind

47

Manually Inspect Malloc Calls

Manually inspect each call of `malloc()`
- Make sure it allocates enough memory

Do the same for `calloc()` and `realloc()`

48

Manually Inspect Malloc Calls

Some of our favorites:

```
char *s1 = "hello, world";
char *s2;
s2 = (char*)malloc(strlen(s1));
strcpy(s2, s1);
```

```
char *s1 = "Hello";
char *s2;
s2 = (char*)malloc(sizeof(s1));
strcpy(s2, s1);
```

What are the errors?

```
long double *p;
p = (long double*)malloc(sizeof(long double*));
```

```
long double *p;
p = (long double*)malloc(sizeof(p));
```

49

49

Agenda

(9) Look for common DMM bugs

(10) Diagnose seg faults using gdb

(11) Manually inspect malloc calls

(12) Hard-code malloc calls

(13) Comment-out free calls

(14) Use Meminfo

(15) Use Valgrind

50

50

Hard-Code Malloc Calls

Temporarily change each call of **malloc()** to request a large number of bytes
  • Say, 10000 bytes
  • If the error disappears, then at least one of your calls is requesting too few bytes

Then incrementally restore each call of **malloc()** to its previous form
  • When the error reappears, you might have found the culprit

Do the same for **calloc()** and **realloc()**

51

51

Agenda

(9) Look for common DMM bugs

(10) Diagnose seg faults using gdb

(11) Manually inspect malloc calls

(12) Hard-code malloc calls

(13) Comment-out free calls

(14) Use Meminfo

(15) Use Valgrind

52

52

Comment-Out Free Calls

Temporarily comment-out every call of **free()**
  • If the error disappears, then program is
    • Freeing memory too soon, or
    • Freeing memory that already has been freed, or
    • Freeing memory that should not be freed,
    • Etc.

Then incrementally "comment-in" each call of **free()**
  • When the error reappears, you might have found the culprit

53

53

Agenda

(9) Look for common DMM bugs

(10) Diagnose seg faults using gdb

(11) Manually inspect malloc calls

(12) Hard-code malloc calls

(13) Comment-out free calls

(14) Use Meminfo

(15) Use Valgrind

54

54

Use Meminfo

Use the **Meminfo** tool
- Simple tool
- Initial version written by Dondero
- Current version written by COS 217 alumnus RJ Liljestrom
- Reports errors **after** program execution
  - Memory leaks
  - Some memory corruption
- User-friendly output

Appendix 1 provides example buggy programs

Appendix 2 provides Meminfo analyses

55

55

Agenda

(9) Look for common DMM bugs

(10) Diagnose seg faults using gdb

(11) Manually inspect malloc calls

(12) Hard-code malloc calls

(13) Comment-out free calls

(14) Use Meminfo

(15) Use Valgrind

56

56

Use Valgrind

Use the **Valgrind** tool
- Complex tool
- Written by multiple developers, worldwide
  - See www.valgrind.org
- Reports errors **during** program execution
  - Memory leaks
  - Multiple frees
  - Dereferences of dangling pointers
  - Memory corruption
- Comprehensive output
  - But not always user-friendly

57

57

Use Valgrind

Appendix 1 provides example buggy programs

Appendix 3 provides Valgrind analyses

58

58

Summary

Strategies and tools for debugging the DMM aspects of your code:
- Look for common DMM bugs
- Diagnose seg faults using gdb
- Manually inspect malloc calls
- Hard-code malloc calls
- Comment-out free calls
- Use Meminfo
- Use Valgrind

59

59

Appendix 1: Buggy Programs

leak.c
```
1.  #include <stdio.h>
2.  #include <stdlib.h>
3.  int main(void)
4.  { int *pi;
5.     pi = (int*)malloc(sizeof(int));
6.     *pi = 5;
7.     printf("%d\n", *pi);
8.     pi = (int*)malloc(sizeof(int));
9.     *pi = 6;
10.    printf("%d\n", *pi);
11.    free(pi);
12.    return 0;
13. }
```

Memory leak:
    Memory allocated at line 5 is leaked

60

60

Appendix 1: Buggy Programs

doublefree.c

```
1.  #include <stdio.h>
2.  #include <stdlib.h>
3.  int main(void)
4.  {  int *pi;
5.     pi = (int*)malloc(sizeof(int));
6.     *pi = 5;
7.     printf("%d\n", *pi);
8.     free(pi);
9.     free(pi);
10.    return 0;
11. }
```

Multiple free:
    Memory allocated at line 5 is freed twice

61

61

Appendix 1: Buggy Programs

danglingptr.c

```
1.  #include <stdio.h>
2.  #include <stdlib.h>
3.  int main(void)
4.  {  int *pi;
5.     pi = (int*)malloc(sizeof(int));
6.     *pi = 5;
7.     printf("%d\n", *pi);
8.     free(pi);
9.     printf("%d\n", *pi);
10.    return 0;
11. }
```

Dereference of dangling pointer:
    Memory accessed at line 9 already was freed

62

62

Appendix 1: Buggy Programs

toosmall.c

```
1.  #include <stdio.h>
2.  #include <stdlib.h>
3.  int main(void)
4.  {  int *pi;
5.     pi = (int*)malloc(1);
6.     *pi = 5;
7.     printf("%d\n", *pi);
8.     free(pi);
9.     return 0;
10. }
```

Memory corruption:
    Too little memory is allocated at line 5
    Line 6 corrupts memory

63

63

Appendix 2: Meminfo

Meminfo can detect memory leaks:

```
$ gcc217m leak.c -o leak
$ ./leak
5
6
$ ls
.  ..  leak.c  leak  meminfo30462.out
$ meminforeport meminfo30462.out
Errors:
    ** 4 un-freed bytes (1 block) allocated at leak.c:5
Summary Statistics:
    Maximum bytes allocated at once: 8
    Total number of allocated bytes: 8
Statistics by Line:
           Bytes    Location
             -4    leak.c:11
              4    leak.c:5
              4    leak.c:8
              4    TOTAL
Statistics by Compilation Unit:
              4    leak.c
              4    TOTAL
```

64

64

Appendix 2: Meminfo

Meminfo can detect memory corruption:

```
$ gcc217m toosmall.c -o toosmall
$ ./toosmall
5
$ ls
.  ..  toosmall.c  toosmall  meminfo31891.out
$ meminforeport meminfo31891.out
Errors:
    ** Underflow detected at toosmall.c:8 for memory allocated at toosmall.c:5
Summary Statistics:
    Maximum bytes allocated at once: 1
    Total number of allocated bytes: 1
Statistics by Line:
           Bytes    Location
              1    toosmall.c:5
             -1    toosmall.c:8
              0    TOTAL
Statistics by Compilation Unit:
              0    toosmall.c
              0    TOTAL
```

65

65

Appendix 2: Meminfo

Meminfo caveats:

- Don't mix .o files built with `gcc217` and `gcc217m`

- `meminfo*.out` files can be large
  - Should delete frequently

- Programs built with `gcc217m` run slower than those built with `gcc217`
  - Don't build with `gcc217m` when doing timing tests

66

66

Appendix 3: Valgrind

Valgrind can detect memory leaks:

```
$ gcc217 leak.c -o leak
$ valgrind ./leak
==31921== Memcheck, a memory error detector
==31921== Copyright (C) 2002-2012, and GNU GPL'd, by Julian Seward et al.
==31921== Using Valgrind-3.8.1 and LibVEX; rerun with -h for copyright info
==31921== Command: leak
==31921==
5
6
==31921==
==31921== HEAP SUMMARY:
==31921==     in use at exit: 4 bytes in 1 blocks
==31921==   total heap usage: 2 allocs, 1 frees, 8 bytes allocated

Appendix 3: Valgrind

Valgrind can detect dereferences of dangling pointers:

```
$ gcc217 danglingptr.c -o danglingptr
$ valgrind ./danglingptr
==336== Memcheck, a memory error detector
==336== Copyright (C) 2002-2012, and GNU GPL'd, by Julian Seward et al.
==336== Using Valgrind-3.8.1 and LibVEX; rerun with -h for copyright info
==336== Command: danglingptr
==336==
5
==336== Invalid read of size 4
==336==    at 0x40059E: main (danglingptr.c:9)
==336==  Address 0x4c2a040 is 0 bytes inside a block of size 4 free'd
==336==    at 0x4A063F0: free (vg_replace_malloc.c:446)
==336==    by 0x400599: main (danglingptr.c:8)
==336==

72

Appendix 3: Valgrind

Valgrind caveats:

- Not intended for programmers who are new to C
  - Messages may be cryptic

- Suggestion:
  - Observe line numbers referenced by messages
  - Study code at those lines
  - Infer meanings of messages
