

Scan Conversion

Adam Finkelstein & Tim Weyrich
Princeton University
COS 426, Spring 2008

3D Rendering Pipeline (for direct illumination)

Scan Conversion & Shading

Overview

- Scan conversion
 - Figure out which pixels to fill
- Shading
 - Determine a color for every filled pixel
- Texture mapping
 - Describe shading variation within polygon interiors
- Visible surface determination
 - Figure out which surface is front-most at every pixel

Scan Conversion

- Render an image of a geometric primitive by setting pixel colors

```
void SetPixel(int x, int y, Color rgba)
```

- Example: Filling the inside of a triangle

Scan Conversion

- Render an image of a geometric primitive by setting pixel colors

```
void SetPixel(int x, int y, Color rgba)
```

- Example: Filling the inside of a triangle

Triangle Scan Conversion

- Properties of a good algorithm
 - Symmetric
 - Straight edges
 - Antialiased edges
 - No cracks between adjacent primitives
 - MUST BE FAST!

Triangle Scan Conversion

- Properties of a good algorithm
 - Symmetric
 - Straight edges
 - Antialiased edges
 - No cracks between adjacent primitives
 - MUST BE FAST!

7

Simple Algorithm

- Color all pixels inside triangle

```
void ScanTriangle(Triangle T, Color rgba){
    for each pixel P at (x,y){
        if (Inside(T, P))
            SetPixel(x, y, rgba);
    }
}
```

8

Inside Triangle Test

- A point is inside a triangle if it is in the positive halfspace of all three boundary lines
 - Triangle vertices are ordered counter-clockwise
 - Point must be on the left side of every boundary line

9

Inside Triangle Test

```
Boolean Inside(Triangle T, Point P)
{
    for each boundary line L of T {
        Scalar d = L.a*P.x + L.b*P.y + L.c;
        if (d < 0.0) return FALSE;
    }
    return TRUE;
}
```

10

Simple Algorithm

- What is bad about this algorithm?

```
void ScanTriangle(Triangle T, Color rgba){
    for each pixel P at (x,y){
        if (Inside(T, P))
            SetPixel(x, y, rgba);
    }
}
```

11

Triangle Sweep-Line Algorithm

- Take advantage of spatial coherence
 - Compute which pixels are inside using horizontal spans
 - Process horizontal spans in scan-line order
- Take advantage of edge linearity
 - Use edge slopes to update coordinates incrementally

12

Triangle Sweep-Line Algorithm

```
void ScanTriangle(Triangle T, Color rgba) {
  for each edge pair {
    initialize  $x_L$ ,  $x_R$ ;
    compute  $dx_L/dy_L$  and  $dx_R/dy_R$ ;
    for each scanline at y
      for (int x =  $x_L$ ; x <=  $x_R$ ; x++)
        SetPixel(x, y, rgba);
     $x_L += dx_L/dy_L$ ;
     $x_R += dx_R/dy_R$ ;
  }
}
```

Historical note:

Bresenham's Algorithm
integer-only version
of line calculation
(good for hardware)

13

Polygon Scan Conversion

- Fill pixels inside a polygon
 - Triangle
 - Quadrilateral
 - Convex
 - Star-shaped
 - Concave
 - Self-intersecting
 - Holes

What problems do we encounter with arbitrary polygons?

14

Polygon Scan Conversion

- Need better test for points inside polygon
 - Triangle method works only for convex polygons

Convex Polygon

Concave Polygon

15

Inside Polygon Rule

- What is a good rule for which pixels are inside?

Concave

Self-Intersecting

With Holes

16

Inside Polygon Rule

- Odd-parity rule
 - Any ray from P to infinity crosses odd number of edges

Concave

Self-Intersecting

With Holes

- What if you hit a vertex?

17

Polygon Sweep-Line Algorithm

- Incremental algorithm to find spans, and determine insideness with odd parity rule
 - Takes advantage of scanline coherence

Triangle

Polygon

18

Polygon Sweep-Line Algorithm

```
void ScanPolygon(Triangle T, Color rgba){
    sort edges by maxy
    make empty "active edge list"
    for each scanline (top-to-bottom) {
        insert/remove edges from "active edge list"
        update x coordinate of every active edge
        sort active edges by x coordinate
        for each pair of active edges (left-to-right)
            SetPixels(xi, xi+1, y, rgba);
    }
}
```

Hardware Scan Conversion

- Convert everything into triangles
 - Scan convert the triangles

Overview

- Scan conversion
 - Figure out which pixels to fill
- Shading
 - Determine a color for each filled pixel
- Texture mapping
 - Describe shading variation within polygon interiors
- Visible surface determination
 - Figure out which surface is front-most at every pixel

Shading

- How do we choose a color for each filled pixel?

Emphasis on methods that can be implemented in hardware

Ray Casting

- Simplest shading approach is to perform independent lighting calculation for every pixel

$$I = I_E + K_A I_{AL} + \sum_i (K_D (N \cdot L_i) I_i + K_S (V \cdot R_i)^n I_i)$$

Polygon Shading

- Can take advantage of spatial coherence
 - Illumination calculations for pixels covered by same primitive are related to each other

$$I = I_E + K_A I_{AL} + \sum_i (K_D (N \cdot L_i) I_i + K_S (V \cdot R_i)^n I_i)$$

Polygon Shading Algorithms

- Flat Shading
- Gouraud Shading
- Phong Shading

25

Polygon Shading Algorithms

- **Flat Shading**
- Gouraud Shading
- Phong Shading

26

Flat Shading

- What if a faceted object is illuminated only by directional light sources and is either diffuse or viewed from infinitely far away

$$I = I_E + K_A I_{AL} + \sum_i (K_D (N \cdot L_i) I_i + K_S (V \cdot R_i)^n I_i)$$

27

Flat Shading

- One illumination calculation per polygon
 - Assign all pixels inside each polygon the same color

28

Flat Shading

- Objects look like they are composed of polygons
 - OK for polyhedral objects
 - Not so good for smooth surfaces

29

Polygon Shading Algorithms

- Flat Shading
- **Gouraud Shading**
- Phong Shading

30

Gouraud Shading

- What if smooth surface is represented by polygonal mesh with a normal at each vertex?

Watt Plate 7

$$I = I_E + K_A I_{AL} + \sum_i (K_D (N \cdot L_i) I_i + K_S (V \cdot R_i)^n I_i)$$

31

Gouraud Shading

- Method 1: One lighting calculation per vertex
 - Assign pixels inside polygon by interpolating colors computed at vertices

32

Gouraud Shading

- Bilinearly interpolate colors at vertices down and across scan lines

33

Gouraud Shading

- Smooth shading over adjacent polygons
 - Curved surfaces
 - Illumination highlights
 - Soft shadows

Mesh with shared normals at vertices

Watt Plate 7

34

Gouraud Shading

- Produces smoothly shaded polygonal mesh
 - Piecewise linear approximation
 - Need fine mesh to capture subtle lighting effects

Flat Shading

Gouraud Shading

35

Polygon Shading Algorithms

- Flat Shading
- Gouraud Shading
- **Phong Shading**

36

Phong Shading

- What if polygonal mesh is too coarse to capture illumination effects in polygon interiors?

$$I = I_E + K_A I_{AL} + \sum_i (K_D (N \cdot L_i) I_i + K_S (V \cdot R_i)^n I_i)$$

37

Phong Shading

- One lighting calculation per pixel
 - Approximate surface normals for points inside polygons by bilinear interpolation of normals from vertices

38

Phong Shading

- Bilinearly interpolate surface normals at vertices down and across scan lines

39

Polygon Shading Algorithms

Watt Plate 7

40

Shading Issues

- Problems with interpolated shading:
 - Polygonal silhouettes
 - Perspective distortion
 - Orientation dependence (due to bilinear interpolation)
 - Problems computing shared vertex normals
 - Problems at T-vertices

41

Overview

- Scan conversion
 - Figure out which pixels to fill
- Shading
 - Determine a color for each filled pixel
- Texture mapping
 - Describe shading variation within polygon interiors
- Visible surface determination
 - Figure out which surface is front-most at every pixel

42

Textures

- Describe color variation in interior of 3D polygon
 - When scan converting a polygon, vary pixel colors according to values fetched from a texture

Angel Figure 9.3

43

Surface Textures

- Add visual detail to surfaces of 3D objects

44

Surface Textures

- Add visual detail to surfaces of 3D objects

[Daren Horley]

45

3D Rendering Pipeline (for direct illumination)

Texture mapping

46

Texture Mapping Overview

- Texture mapping methods
 - Mapping
 - Filtering
 - Parameterization
- Texture mapping applications
 - Modulation textures
 - Illumination mapping
 - Bump mapping
 - Environment mapping
 - Image-based rendering
 - Non-photorealistic rendering

47

Texture Mapping

- Steps:
 - Define texture
 - Specify mapping from texture to surface
 - Lookup texture values during scan conversion

48

Texture Mapping

- When scan convert, map from ...
 - image coordinate system (x,y) to
 - modeling coordinate system (u,v) to
 - texture image (t,s)

49

Texture Mapping

- Texture mapping is a 2D projective transformation
 - texture coordinate system: (t,s) to
 - image coordinate system (x,y)

[Allison Klein]

50

Texture Mapping

- Scan conversion
 - Interpolate texture coordinates down/across scan lines
 - Distortion due to bilinear interpolation approximation
 - Cut polygons into smaller ones, or
 - Perspective divide at each pixel

51

Texture Mapping

Hill Figure 8.42

52

Texture Mapping Overview

- Texture mapping methods
 - Mapping
 - Filtering
 - Parameterization
- Texture mapping applications
 - Modulation textures
 - Illumination mapping
 - Bump mapping
 - Environment mapping
 - Image-based rendering
 - Non-photorealistic rendering

53

Texture Filtering

- Must sample texture to determine color at each pixel in image

Angel Figure 9.4

54

Texture Filtering

- Aliasing is a problem

Angel Figure 9.5

55

Texture Filtering

- Ideally, use elliptically shaped convolution filters

In practice, use rectangles

56

Texture Filtering

- Size of filter depends on projective warp
 - Can prefiltering images
 - » Mip maps
 - » Summed area tables

Angel Figure 9.14

57

Mip Maps

- Keep textures prefiltered at multiple resolutions
 - For each pixel, linearly interpolate between two closest levels (e.g., trilinear filtering)
 - Fast, easy for hardware

58

Summed-area tables

- At each texel keep sum of all values down & right
 - To compute sum of all values within a rectangle, simply subtract two entries
 - Better ability to capture very oblique projections
 - But, cannot store values in a single byte

59

Texture Mapping Overview

- Texture mapping methods
 - Mapping
 - Filtering
 - Parameterization
- Texture mapping applications
 - Modulation textures
 - Illumination mapping
 - Bump mapping
 - Environment mapping
 - Image-based rendering
 - Non-photorealistic rendering

60

Parameterization

- Q: How do we decide *where* on the geometry each color from the image should go?

61

Option: Varieties of projections

[Paul Bourke]

62

Option: unfold the surface

63

Option: make an atlas

charts

atlas

surface

[Sander2001]

64

Overview

- Texture mapping methods
 - Mapping
 - Filtering
 - Parameterization
- Texture mapping applications
 - Modulation textures
 - Illumination mapping
 - Bump mapping
 - Environment mapping
 - Image-based rendering

65

Modulation textures

Map texture values to scale factor

$$I = T(s, t)(I_E + K_A I_A + \sum_L (K_D(N \cdot L) + K_S(V \cdot R)^n) S_L I_L + K_T I_T + K_S I_S)$$

66

Illumination Mapping

Map texture values to surface material parameter

- K_A
- K_D
- K_S
- K_T
- n

$$K_T = T(s,t)$$

$$I = I_E + K_A I_A + \sum_L (K_D (N \cdot L) + K_S (V \cdot R)^n) S_L I_L + K_T I_T + K_S I_S$$

67

Bump Mapping

Texture values perturb surface normals

68

Bump Mapping

H&B Figure 14.100

69

Environment Mapping

Texture values are reflected off surface patch

H&B Figure 14.93

70

Image-Based Rendering

Map photographic textures to provide details for coarsely detailed polygonal model

71

Solid textures

Texture values indexed by 3D location (x,y,z)

- Expensive storage, or
- Compute on the fly, e.g. Perlin noise →

72

Texture Mapping Summary

- Texture mapping methods
 - Parameterization
 - Mapping
 - Filtering
- Texture mapping applications
 - Modulation textures
 - Illumination mapping
 - Bump mapping
 - Environment mapping
 - Image-based rendering
 - Volume textures

73

Overview

- Scan conversion
 - Figure out which pixels to fill
- Shading
 - Determine a color for each filled pixel
- Texture mapping
 - Describe shading variation within polygon interiors
- Visible surface determination
 - Figure out which surface is front-most at every pixel

74

Visible Surface Determination

- Make sure only front-most contributes to color at every pixel

75

Depth sort

- “Painter’s algorithm”
 - Sort surfaces in order of decreasing maximum depth
 - Scan convert surfaces in back-to-front order, overwriting pixels

76

3D Rendering Pipeline

- Depth sort comments
- $O(n \log n)$
 - Better with frame coherence?
 - Implemented in software
 - Render every polygon
 - Often use BSP-tree or static list ordering

77

Scan-Line Algorithm

- For each scan line, construct and sort spans

78

Scan-Line Algorithm

- For each scan line, construct and sort spans
 - Sort by depths within each scan line

Scan-Line Algorithm

- Scan-line comments
- + Coherence among along scan lines
 - + Only shade each pixel once
 - Requires access to all polygons
 - Not suitable for hardware pipeline
 - o Commonly used in software

Z-Buffer

- Color & depth of closest object for every pixel
 - Update only pixels whose depth is closer than in buffer
 - Depths are interpolated from vertices, just like colors

Z-Buffer

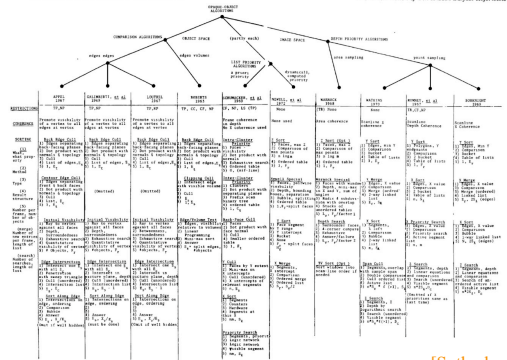

- Z-buffer comments
- + Polygons rasterized in any order
 - + Process one polygon at a time
 - + Suitable for hardware pipeline
 - Requires extra memory for z-buffer
 - Subject to aliasing (A-buffer)
 - o Commonly in hardware

Hidden Surface Removal Algorithms

36 • T. E. Sutherland, B. F. Sproull, and R. A. Schumaker A Characterization of Ten Hidden-Surface Algorithms • 37

[Sutherland '74]

Summary

- Scan conversion
 - Sweep-line algorithm
- Shading algorithms
 - Flat, Gouraud
- Texture mapping
 - Mipmaps
- Visibility determination
 - Z-buffer

This is all in hardware
