Speakers

Hard drive

Network

Printer

MP3 Player

Goal. Java programs that interact with the outside world.

Input and Output

Input devices.

Keyboard

Mouse

Hard drive

Network

Digital camera

Microphone

Output devices.

Display

Speakers

Hard drive

Network

Printer

MP3 Player

Our approach.

- Define Java libraries of functions for input and output.
- Use operating system (OS) to connect Java programs to:
file system, each other, keyboard, mouse, display, speakers.

Terminal

Terminal. Application where you can type commands to control the operating system.

```
Terminal - tcsh - 65x12
[wayne:bicycle] ~/introscs> java RandomSeq.java
[wayne:bicycle] ~/introscs> java RandomSeq 4
0.35603714028287214
0.9969546788376992
0.16163508427043993
0.8792283644361208
[wayne:bicycle] ~/introscs>
```

Mac OS X

```
C:\WINNT\System32\cmd.exe
Microsoft(R) Windows NT (TM)
(C) Copyright 1985-1996 Microsoft Corp.
C:>>cd introscs
C:>introscs>d hello
C:>introscs>hello>javac HelloWorld.java
C:>introscs>hello>java HelloWorld
Hello, World
C:>introscs>hello>
```

Microsoft Windows

Command-Line Input and Standard Output

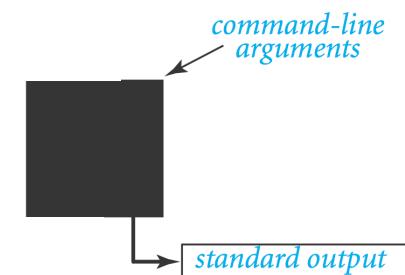

Command-line input. Read an integer N as command-line argument.

Standard output.

- Flexible OS abstraction for output.
- In Java, output from `System.out.println()` goes to standard output.
- By default, standard output is sent to Terminal.

```
public class RandomSeq {  
    public static void main(String[] args) {  
        int N = Integer.parseInt(args[0]);  
        for (int i = 0; i < N; i++) {  
            System.out.println(Math.random());  
        }  
    }  
}  
  
% java RandomSeq 4  
0.9320744627218469  
0.4279508713950715  
0.08994615071160994  
0.6579792663546435
```

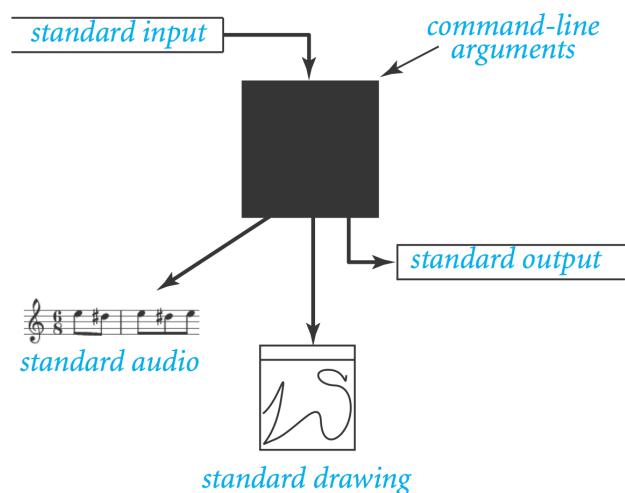

Old Bird's Eye View

5

6

New Bird's Eye View

Standard Input and Output

7

Command-Line Input vs. Standard Input

Command-line inputs.

- Use command-line inputs to read in a **few** user values.
- Not practical for many user inputs.
- Input entered **before** program begins execution.

Standard input.

- Flexible OS abstraction for input.
- By default, standard input is received from Terminal window.
- Input entered **while** program is executing.

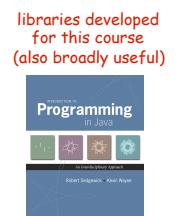

Standard Input and Output

Standard input. StdIn is library for reading text input.

Standard output. StdOut is library for writing text output.

```
public class StdIn
    boolean isEmpty()           true if no more values, false otherwise
    int readInt()               read a value of type int
    double readDouble()         read a value of type double
    long readLong()             read a value of type long
    boolean readBoolean()       read a value of type boolean
    char readChar()             read a value of type char
    String readString()         read a value of type String
    String readLine()           read the rest of the line
    String readAll()            read the rest of the text
```

```
public class StdOut
    void print(String s)        print s
    void println(String s)      print s, followed by newline
    void println()              print a new line
    void printf(String f, ...)  formatted print
```

libraries developed
for this course
(also broadly useful)

9

10

Standard Input and Output

To use. Download StdIn.java and StdOut.java from booksite, and put in working directory (or use classpath).

see booksite

```
public class Add {
    public static void main(String[] args) {
        StdOut.print("Type the first integer: ");
        int x = StdIn.readInt();
        StdOut.print("Type the second integer: ");
        int y = StdIn.readInt();
        int sum = x + y;
        StdOut.println("Their sum is " + sum);
    }
}
```

```
% java Add
Type the first integer: 1
Type the second integer: 2
Their sum is 3
```

Averaging A Stream of Numbers

Average. Read in a stream of numbers, and print their average.

```
public class Average {
    public static void main(String[] args) {
        double sum = 0.0; // cumulative total
        int n = 0;        // number of values
        while (!StdIn.isEmpty()) {
            double x = StdIn.readDouble();
            sum = sum + x;
            n++;
        }
        StdOut.println(sum / n);
    }
}
```

```
% java Average
10.0 5.0 6.0
3.0 7.0 32.0
<Ctrl-d>
10.5
```

<Ctrl-d> for OS X/Linux/Unix/DrJava
<Ctrl-z> for Windows

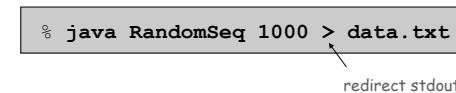

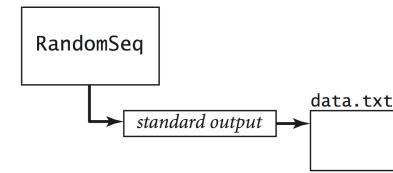

Key point. Program does not limit the amount of data.

11

12

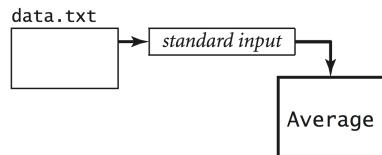

Redirection and Piping

Redirecting standard output. Use OS directive to send standard output to a file for permanent storage (instead of terminal window).

Redirecting Standard Input

Redirecting standard input. Use OS directive to read standard input from a file (instead of terminal window).

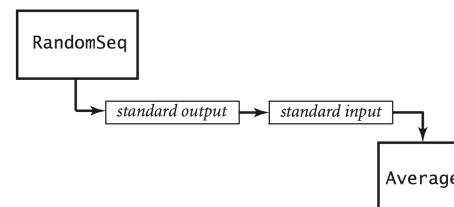

```

% more < data.txt
0.5475375782884312
0.4971087292684019
0.23123808041753813
...
% java Average < data.txt
0.4947655567740991
  
```

redirect stdin

Connecting Programs

Piping. Use OS directive to make the standard output of one program become the standard input of another.

```

% java RandomSeq 1000000 | java Average
0.4997970473016028

% java RandomSeq 1000000 | java Average
0.5002071875644842
  
```

Standard Drawing

Standard drawing. StdDraw is library for producing graphical output.

```
public class StdDraw
    void line(double x0, double y0, double x1, double y1)
    void point(double x, double y)
    void text(double x, double y, String s)
    void circle(double x, double y, double r)
    void filledCircle(double x, double y, double r)
    void square(double x, double y, double r)
    void filledSquare(double x, double y, double r)
    void polygon(double[] x, double[] y)
    void filledPolygon(double[] x, double[] y)

    void setXscale(double x0, double x1)      reset x range to (x0, x1)
    void setYscale(double y0, double y1)      reset y range to (y0, y1)
    void setPenRadius(double r)                set pen radius to r
    void setPenColor(Color c)                 set pen color to c
    void setFont(Font f)                     set text font to f
    void setCanvasSize(int w, int h)          set canvas to w-by-h window
    void clear(Color c)                      clear the canvas; color it c
    void show(int dt)                        show all; pause dt milliseconds
    void save(String filename)               save to a .jpg or w.png file

Note: Methods with the same names but no arguments reset to default values.
```

library developed
for this course
(also broadly useful)

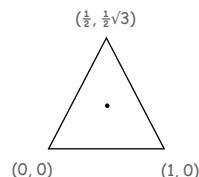

18

Standard Draw

Standard drawing. We provide library `StdDraw` to plot graphics.
To use. Download `StdDraw.java` and put in working directory.

```
public class Triangle {
    public static void main(String[] args) {
        double t = Math.sqrt(3.0) / 2.0;
        StdDraw.line(0.0, 0.0, 1.0, 0.0);
        StdDraw.line(1.0, 0.0, 0.5, t);
        StdDraw.line(0.5, t, 0.0, 0.0);
        StdDraw.point(0.5, t/3.0);
    }
}
```

```
% java Triangle
```

Data Visualization

Plot filter. Read in a sequence of (x, y) coordinates from standard input, and plot using standard drawing.

```
public class PlotFilter {
    public static void main(String[] args) {
        double xmin = StdIn.readDouble();
        double ymin = StdIn.readDouble();
        double xmax = StdIn.readDouble();
        double ymax = StdIn.readDouble();
        StdDraw.setXscale(xmin, xmax);
        StdDraw.setYscale(ymin, ymax);

        while (!StdIn.isEmpty()) {
            double x = StdIn.readDouble();
            double y = StdIn.readDouble();
            StdDraw.point(x, y);
        }
    }
}
```

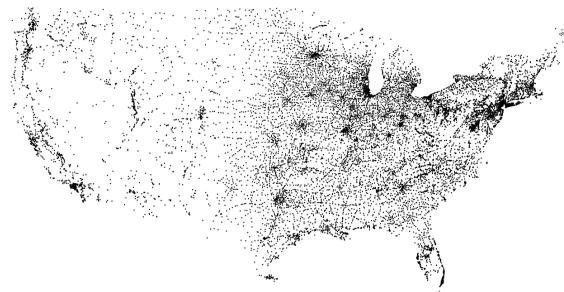

rescale coordinate system

read in points,
and plot them

Data Visualization

```
% more < USA.txt
669905.0 247205.0 1244962.0 490000.0
1097038.8890 245552.7780
1103961.1110 247133.3330
1104677.7780 247205.5560
...
% java PlotFilter < USA.txt
```

bounding box
coordinates of 13,509 US cities

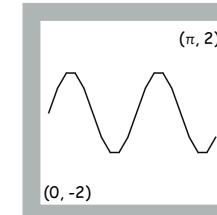

21

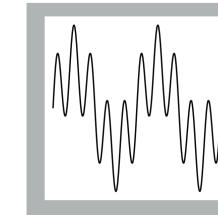

Plotting a Function

```
double[] x = new double[N+1];
double[] y = new double[N+1];
for (int i = 0; i <= N; i++) {
    x[i] = Math.PI * i / N;
    y[i] = Math.sin(4*x[i]) + Math.sin(20*x[i]);
}
StdDraw.setXscale(0, Math.PI);
StdDraw.setYscale(-2.0, +2.0);
for (int i = 0; i < N; i++)
    StdDraw.line(x[i], y[i], x[i+1], y[i+1]);
```

$N = 20$

$N = 200$

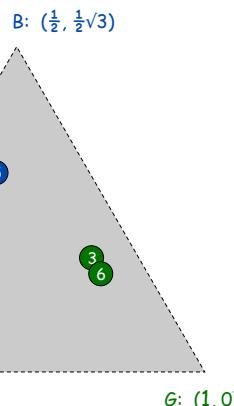

$$y = \sin 4x + \sin 20x, x \in [0, \pi]$$

22

Chaos Game

Chaos game. Play on equilateral triangle, with vertices R, G, B.

- Start at R.
- Repeat the following N times:
 - pick a random vertex
 - move halfway between current point and vertex
 - draw a point in color of vertex

Q. What picture emerges?

B B G R B G ...

Chaos Game

```
public class Chaos {
    public static void main(String[] args) {
        int T = Integer.parseInt(args[0]);
        double[] cx = { 0.000, 1.000, 0.500 };
        double[] cy = { 0.000, 0.000, 0.866 };

        double x = 0.0, y = 0.0;
        for (int t = 0; t < T; t++) {
            int r = (int) (Math.random() * 3);
            x = (x + cx[r]) / 2.0;
            y = (y + cy[r]) / 2.0;           between 0 and 2
            StdDraw.point(x, y);
        }
    }
}
```

$\frac{1}{2}\sqrt{3}$
(avoid hardwired constants like this)

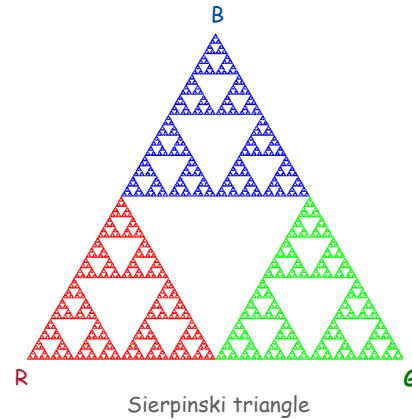

23

24

Chaos Game

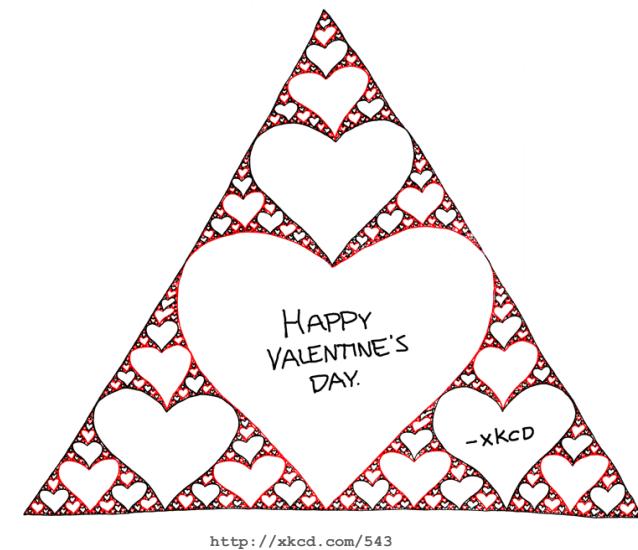

Easy modification. Color point according to random vertex chosen using `StdDraw.setPenColor(StdDraw.RED)` to change the pen color.

```
% java Chaos 10000
```

25

Commercial Break

26

Commercial Break

Barnsley Fern

Barnsley fern. Play chaos game with different rules.

probability	new x	new y
2%	.50	.27y
15%	$-.14x + .26y + .57$	$.25x + .22y - .04$
13%	$.17x - .21y + .41$	$.22x + .18y + .09$
70%	$.78x + .03y + .11$	$-.03x + .74y + .27$

- Q. What does computation tell us about nature?
- Q. What does nature tell us about computation?

20th century sciences. Formulas.

21st century sciences. Algorithms?

27

28

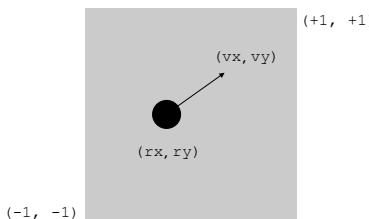

Animation

Animation loop. Repeat the following:

- Clear the screen.
- Move the object.
- Draw the object.
- Display and pause for a short while.

Ex. Bouncing ball.

- Ball has position (rx, ry) and constant velocity (vx, vy) .
- Detect collision with wall and reverse velocity.

29

Bouncing Ball

```
public class BouncingBall {  
    public static void main(String[] args) {  
        double rx = .480, ry = .860;  
        double vx = .015, vy = .023;  
        double radius = .05;  
  
        StdDraw.setXscale(-1.0, +1.0);  
        StdDraw.setYscale(-1.0, +1.0);  
  
        while(true) {  
            if (Math.abs(rx + vx) + radius > 1.0) vx = -vx;  
            if (Math.abs(ry + vy) + radius > 1.0) vy = -vy;  
  
            rx = rx + vx;  
            ry = ry + vy;  
  
            StdDraw.setPenColor(StdDraw.GRAY);  
            StdDraw.filledSquare(0.0, 0.0, 1.0);  
            StdDraw.setPenColor(StdDraw.BLACK);  
            StdDraw.filledCircle(rx, ry, radius);  
            StdDraw.show(20);  
        }  
    }  
}
```

bounce

position
constant velocity
radius
rescale coordinates

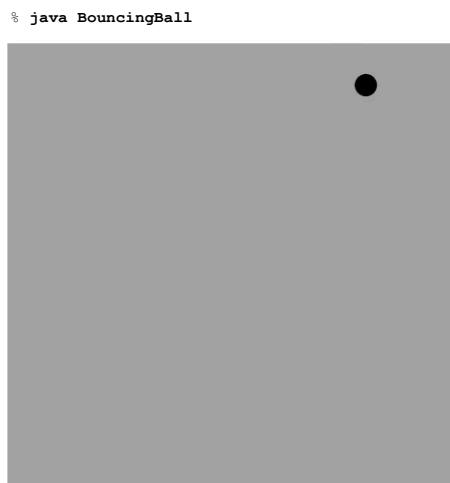

update position

clear background
draw the ball

turn on animation mode:
display and pause for 50ms

30

Bouncing Ball Demo

31

Special Effects

Images. Put `.gif`, `.png`, or `.jpg` file in the working directory and use `StdDraw.picture()` to draw it.

Sound effects. Put `.wav`, `.mid`, or `.au` file in the working directory and use `StdAudio.play()` to play it.

Ex. Modify `BouncingBall` to display image and play sound upon collision.
▪ Replace `StdDraw.filledCircle()` with:

```
StdDraw.picture(rx, ry, "earth.gif");
```

▪ Add following code upon collision with wall:

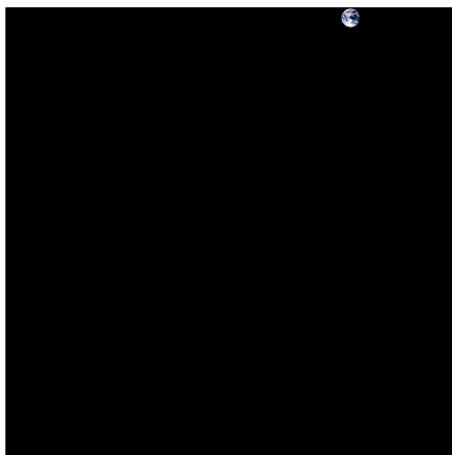

```
StdAudio.play("boing.wav");
```

32

Deluxe Bouncing Ball Demo

Bouncing Ball Challenge

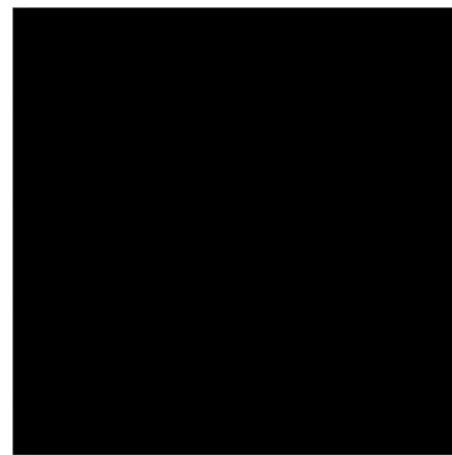

```
% java DeluxeBouncingBall
```

33

Q. What happens if you call `StdDraw.filledSquare()` once before loop
(instead of inside)?

```
% java DeluxeBouncingBall
```

34
