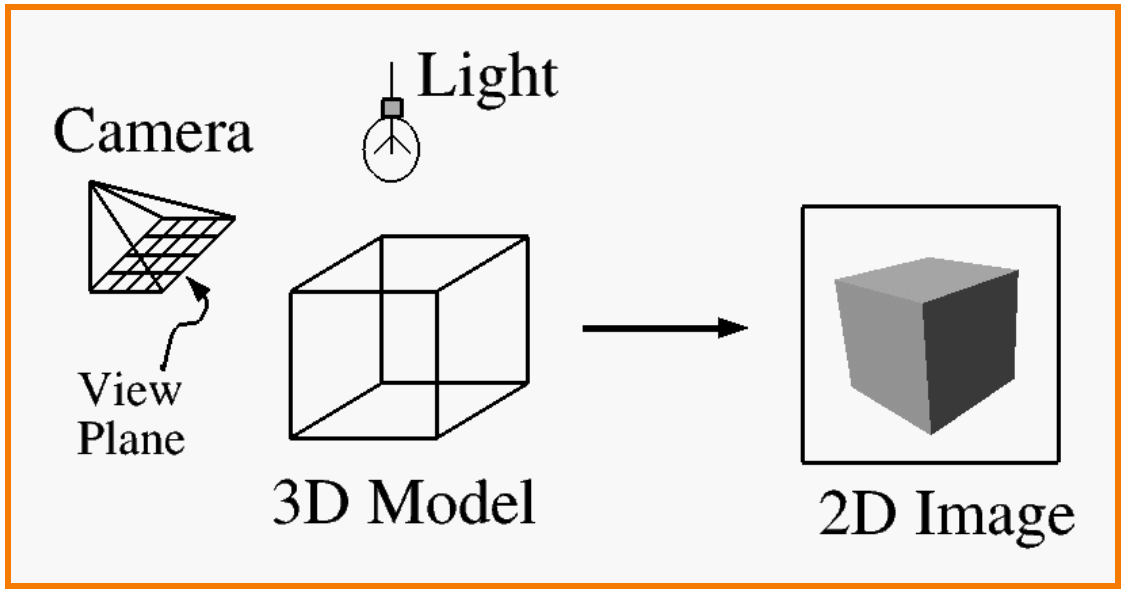
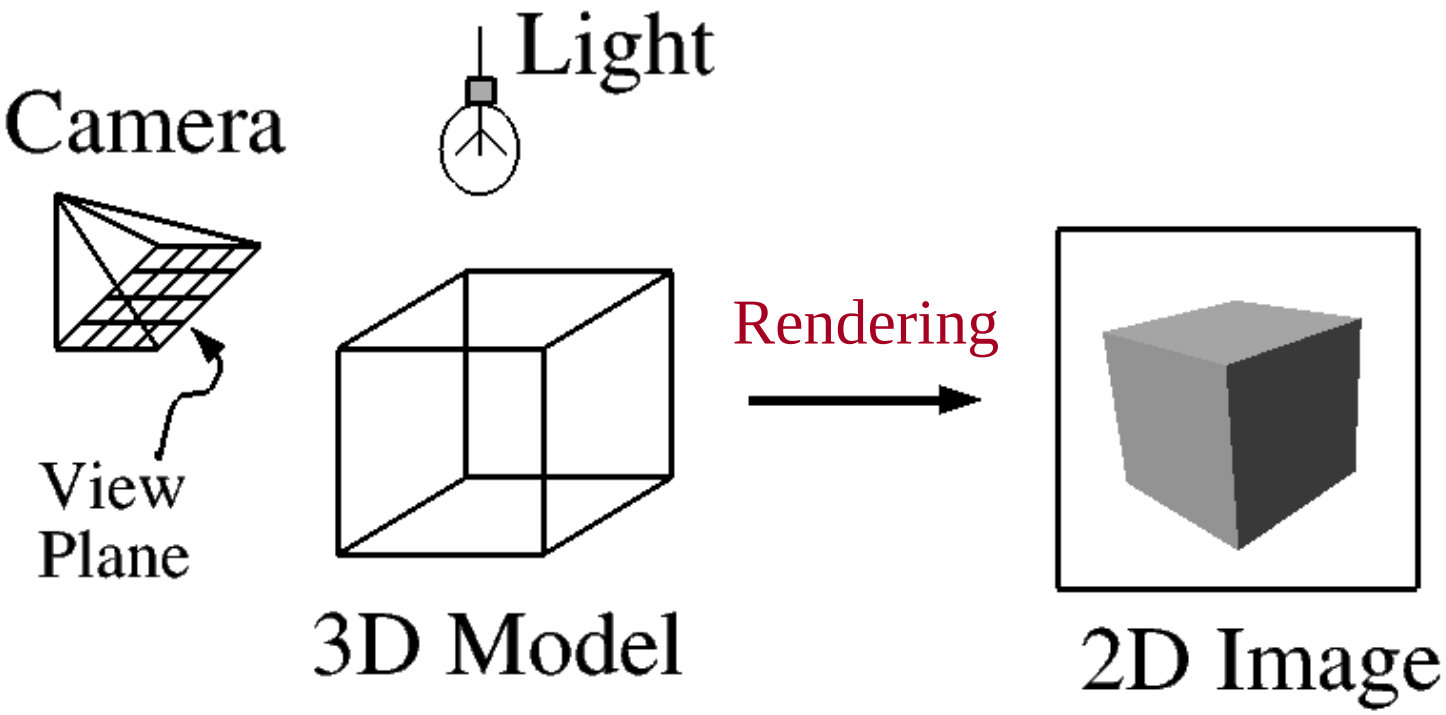
What is 3D Rendering?

- Topics in computer graphics
  - Imaging = *representing 2D images*
  - Modeling = *representing 3D objects*
  - Rendering = *constructing 2D images from 3D models*
  - Animation = *simulating changes over time*



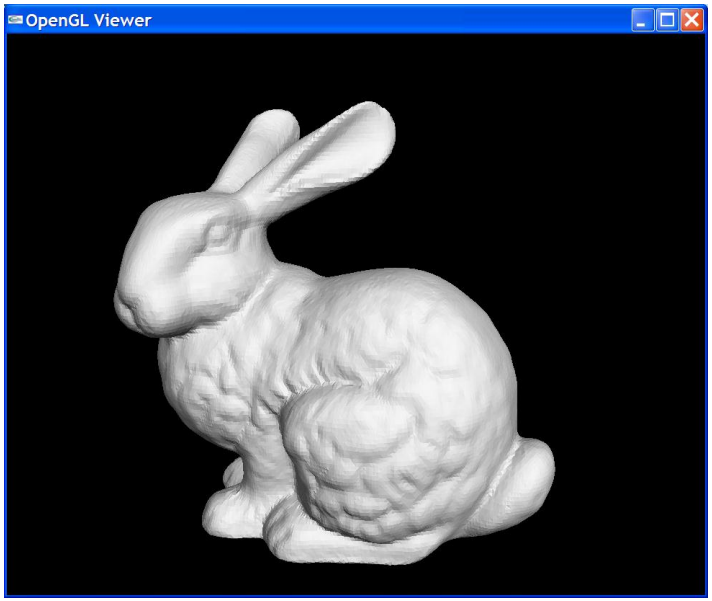
What is 3D Rendering?

- Construct image from 3D model



3D Rendering Scenario I

- Interactive
  - Images generated in fraction of a second (<1/10) as user controls rendering parameters (e.g., camera)
    - Achieve highest quality possible in given time
    - Useful for visualization, games, etc.



meshview

3D Rendering Scenario II

- Offline
  - One image generated with as much quality as possible for a particular set of rendering parameters
    - Take as much time as is needed (minutes)
    - Photorealisism: movies, cut scenes, etc.

  - Lights
  - Reflectance
  - Shadows
  - Indirect illumination
  - Sampling
  - etc.

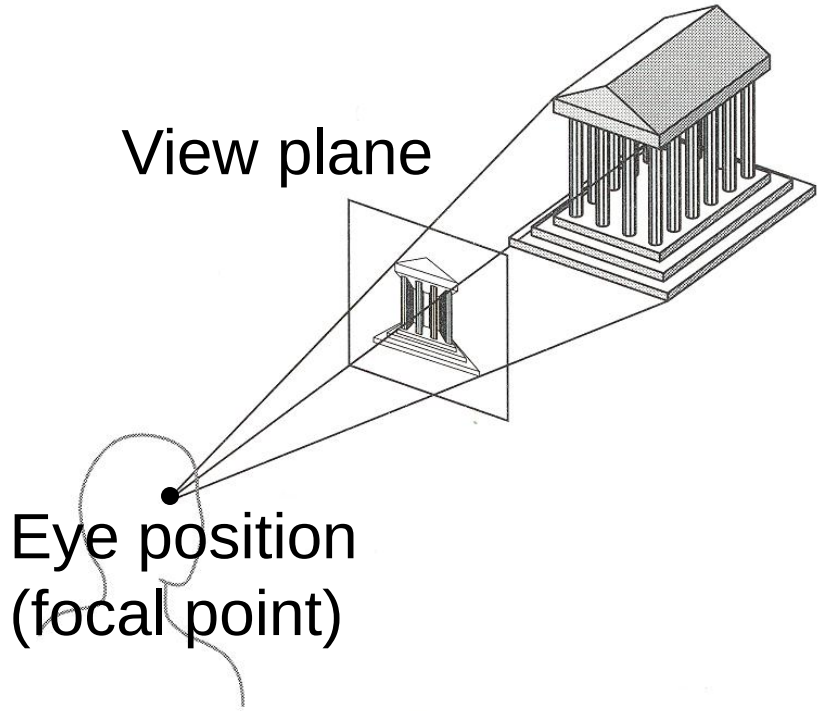
Camera Models

- The most common model is pin-hole camera
  - Light rays arrive along paths toward focal point
  - No lens effects (e.g., everything in focus)



Other models consider ...

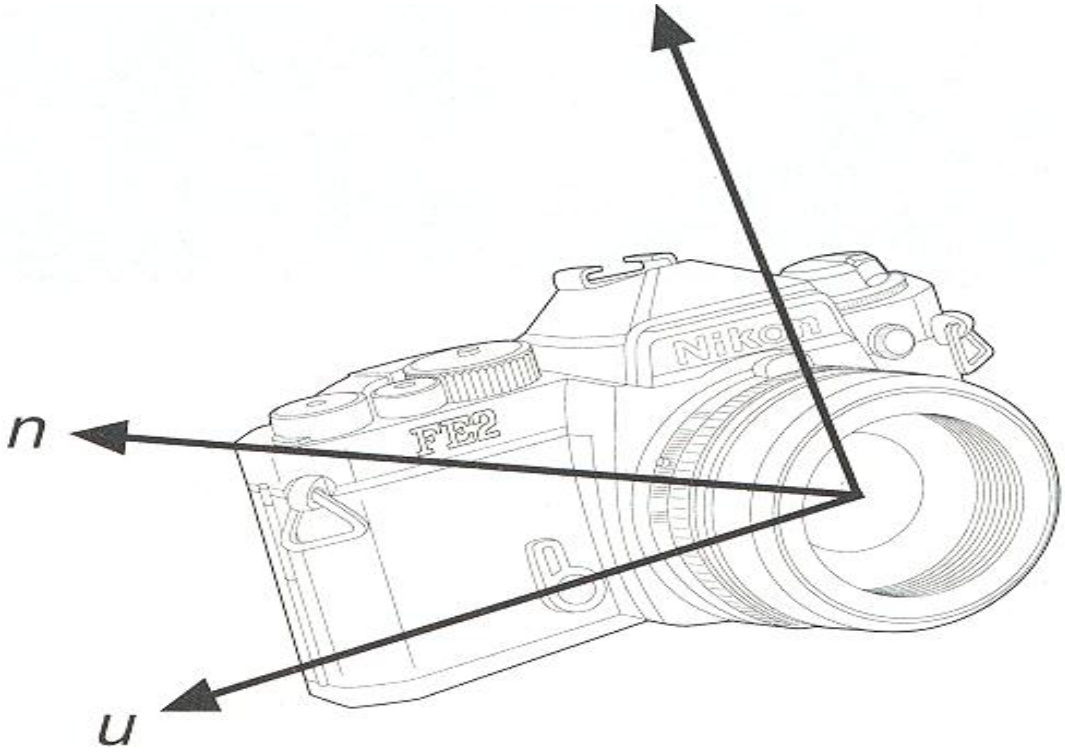
Depth of field

Motion blur

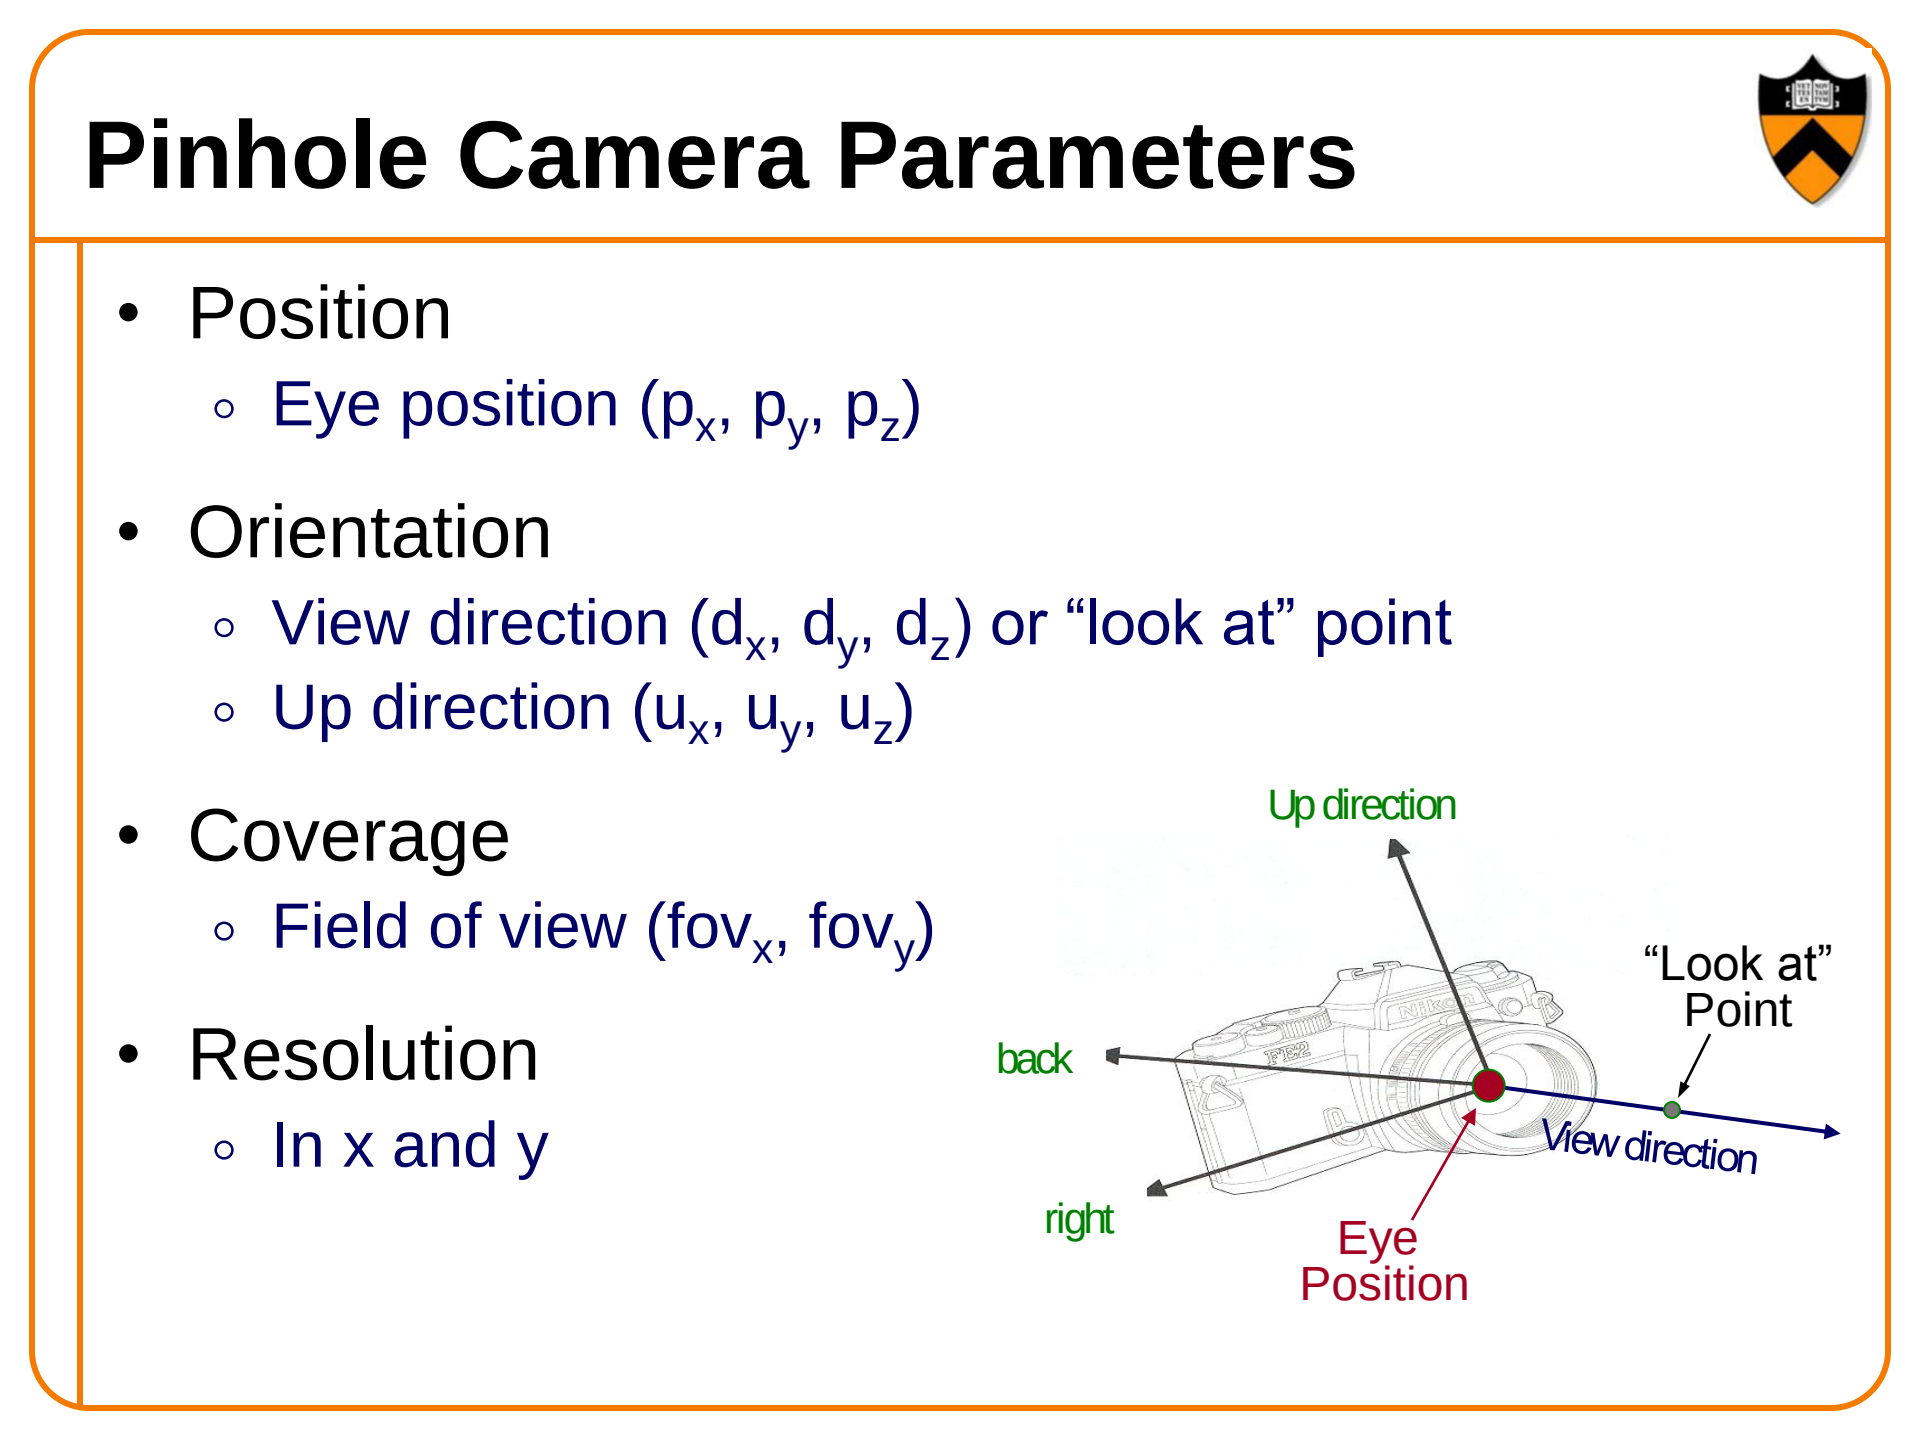
Lens distortion

Camera Parameters

- What are the parameters of a camera?

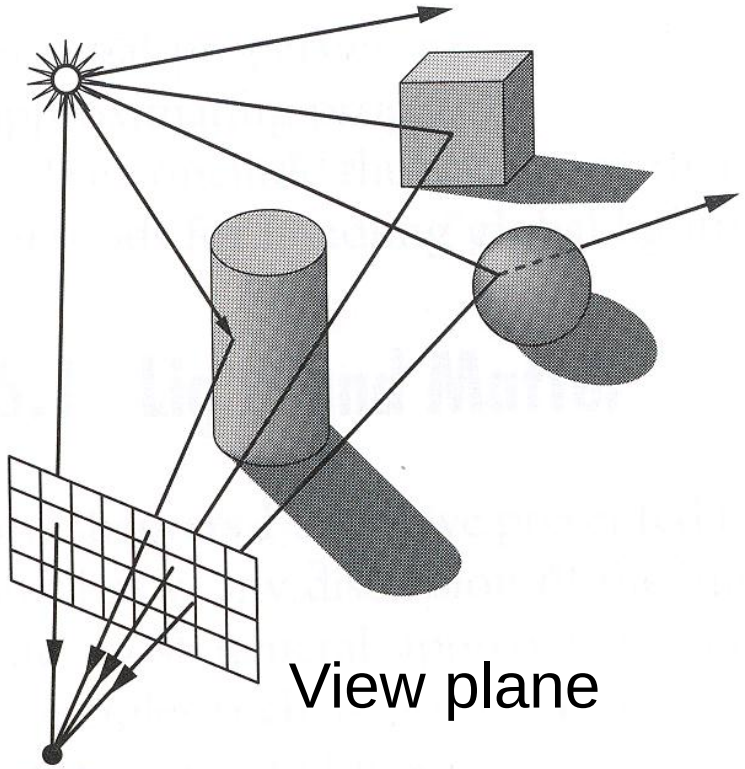


Pinhole Camera Parameters



- Position
  - Eye position (p_x, p_y, p_z)
- Orientation
  - View direction (d_x, d_y, d_z) or “look at” point
  - Up direction (u_x, u_y, u_z)
- Coverage
  - Field of view (fov_x, fov_y)
- Resolution
  - In x and y

View Plane



3D Rendering Issues

  - Camera
  - Visible surface determination
  - Lights
  - Reflectance
  - Shadows
  - Indirect illumination
  - Sampling
  - etc.

Visible Surface Determination

- The color of each pixel on the view plane depends on the radiance (“amount of light”) emanating from visible surfaces

How find visible surfaces?

In Practice… Brute Force

- **Ray tracing** (usually offline)
  - **for each** pixel: determine closest object hit by ray
  - compute color

- **Rasterization** (interactive)
  - **for each** object: enumerate pixels it hits
  - keep track of color, depth of current-best surface at each pixel

Ray Casting

- For each sample …
  - Construct ray from eye position through view plane
  - Find first surface intersected by ray through pixel
  - Compute color of sample based on surface radiance

3D Rendering Issues

- What issues must be addressed by a 3D rendering system?
  - Camera
  - Visible surface determinaton
  - Shadows
  - Reflectance
  - Indirect illumination
  - Sampling
  - etc.

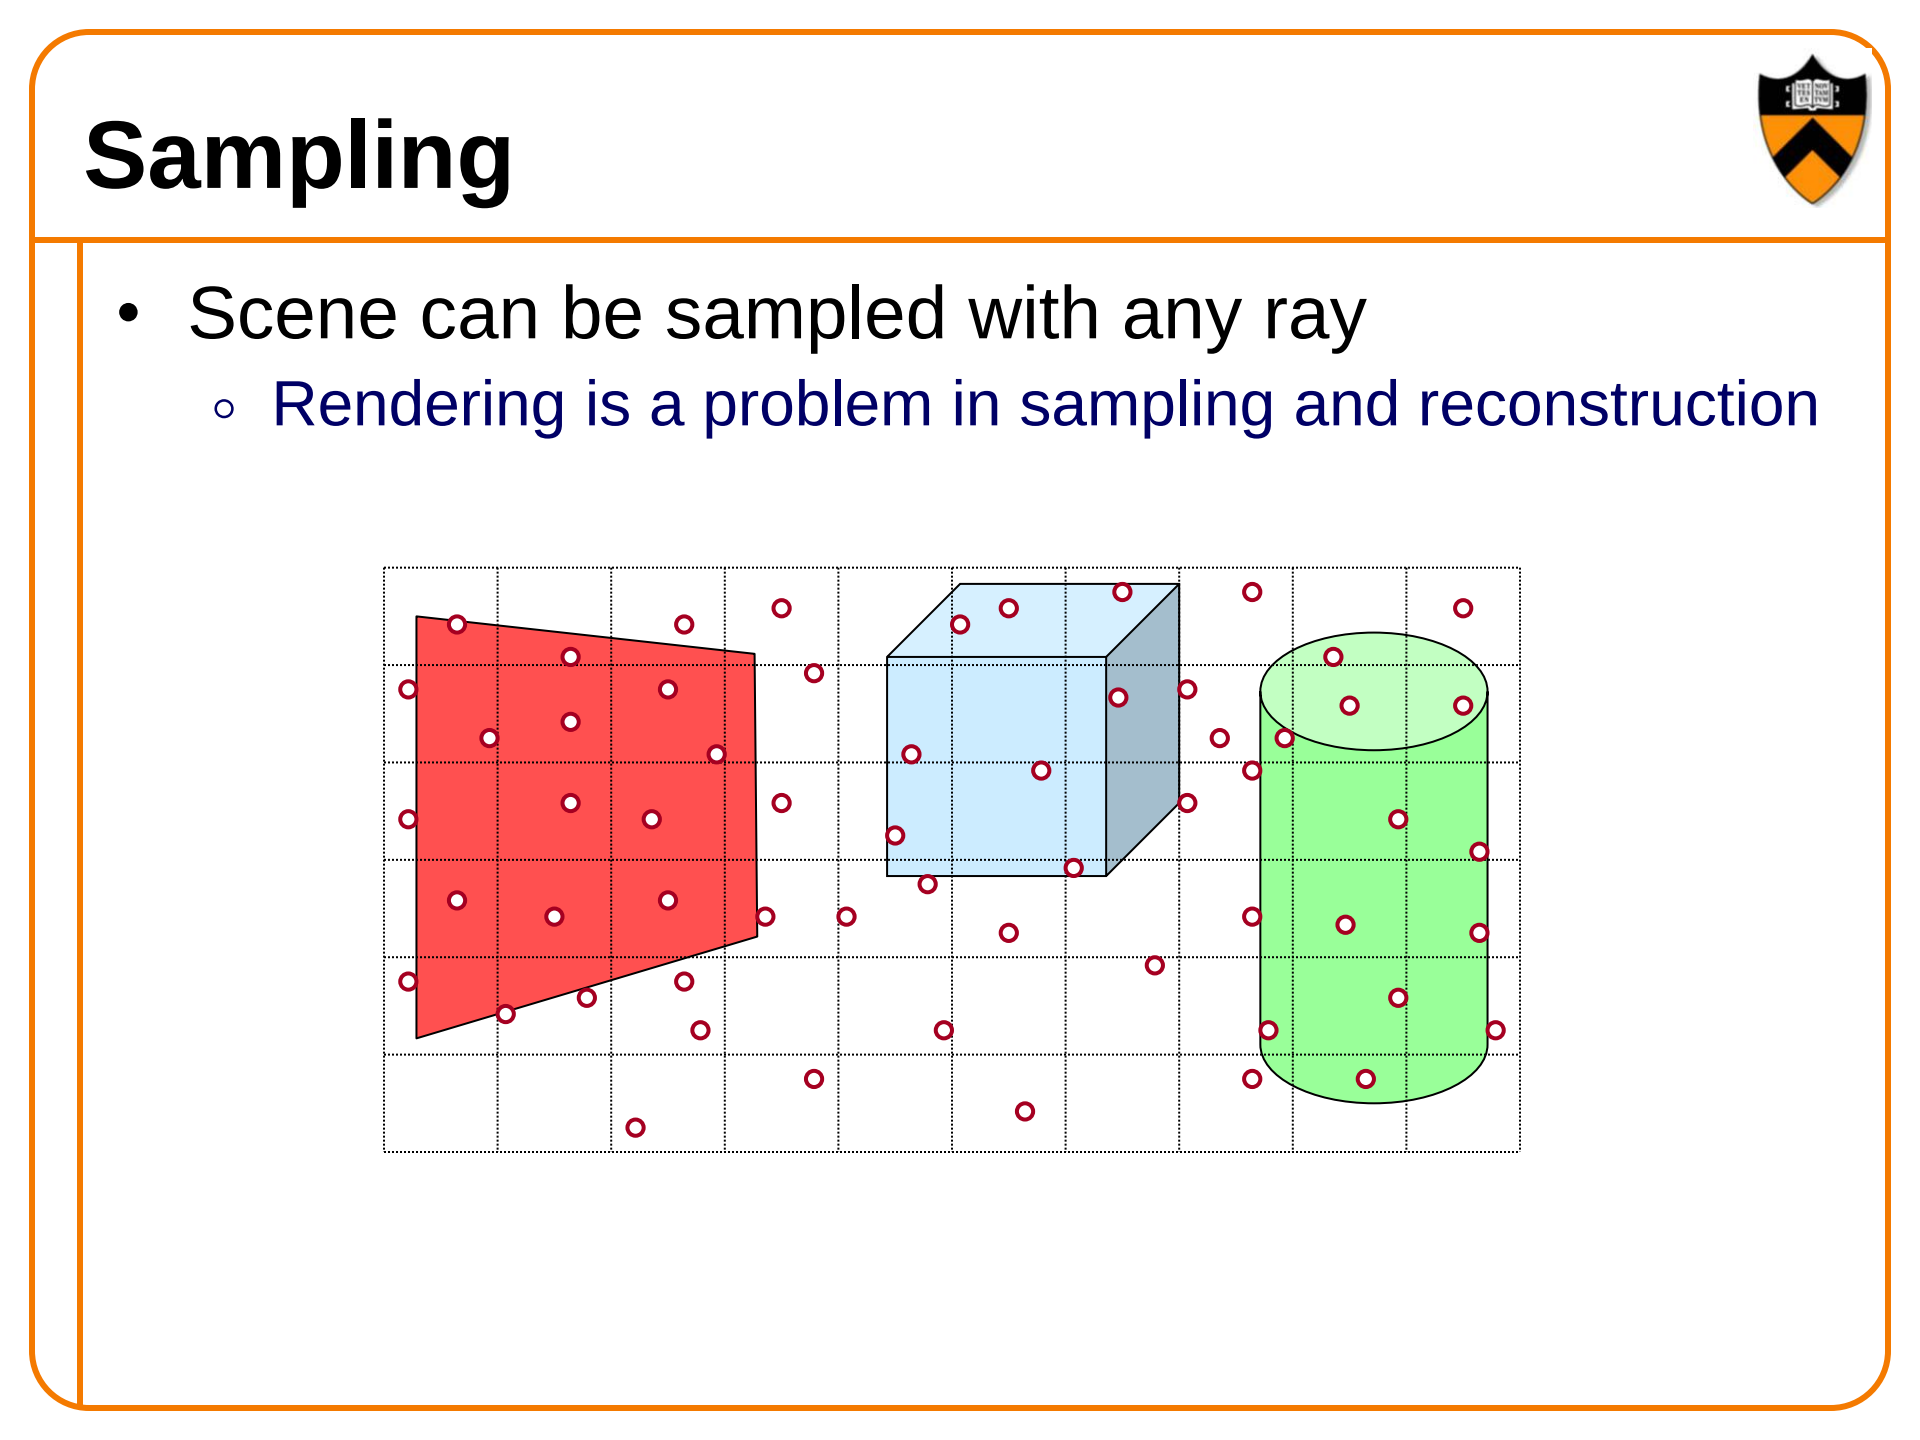
Sampling



- Scene can be sampled with any ray
  - Rendering is a problem in sampling and reconstruction

Summary

- Topics for upcoming lectures
  - Camera
  - Visible surface determinaton
  - Shadows
  - Reflectance
  - Indirect illumination
  - Sampling
  - etc.
