- ▶ *rules of the game*
- ▶ *selection sort*
- ▶ *insertion sort*
- ▶ *shuffling*
- ▶ *comparators*

# Sorting problem

---

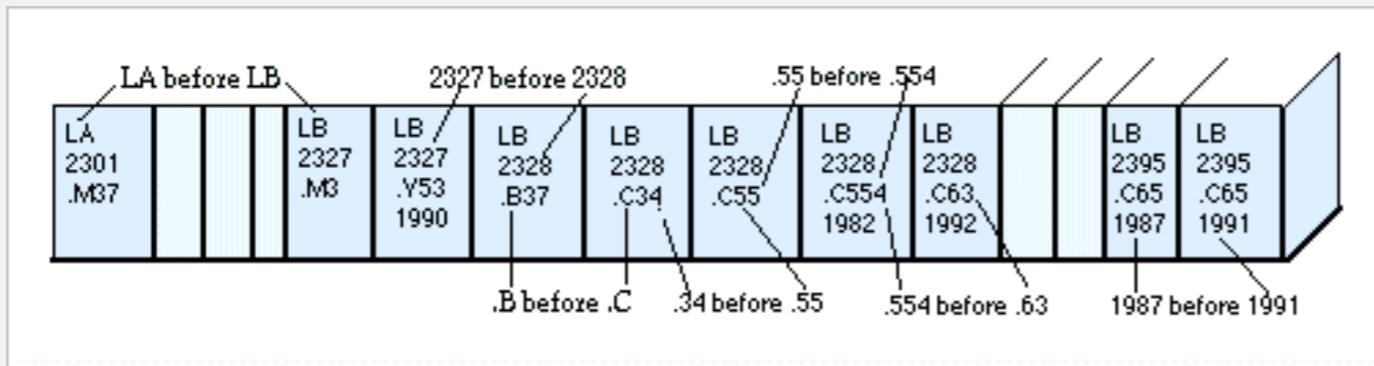

Ex. Student records in a university.

item →	Chen	3	A	(991) 878-4944	308 Blair
	Rohde	2	A	(232) 343-5555	343 Forbes
	Gazsi	4	B	(800) 867-5309	101 Brown
	Furia	1	A	(766) 093-9873	101 Brown
	Kanaga	3	B	(898) 122-9643	22 Brown
	Andrews	3	A	(664) 480-0023	097 Little
key →	Battle	4	C	(874) 088-1212	121 Whitman

Sort. Rearrange array of  $N$  items in ascending order by key.

Andrews	3	A	(664) 480-0023	097 Little
Battle	4	C	(874) 088-1212	121 Whitman
Chen	3	A	(991) 878-4944	308 Blair
Furia	1	A	(766) 093-9873	101 Brown
Gazsi	4	B	(800) 867-5309	101 Brown
Kanaga	3	B	(898) 122-9643	22 Brown
Rohde	2	A	(232) 343-5555	343 Forbes

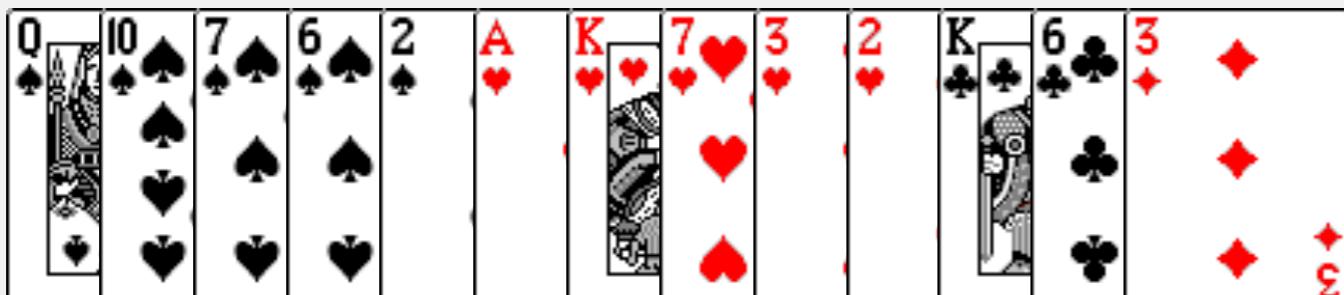

# Sorting applications

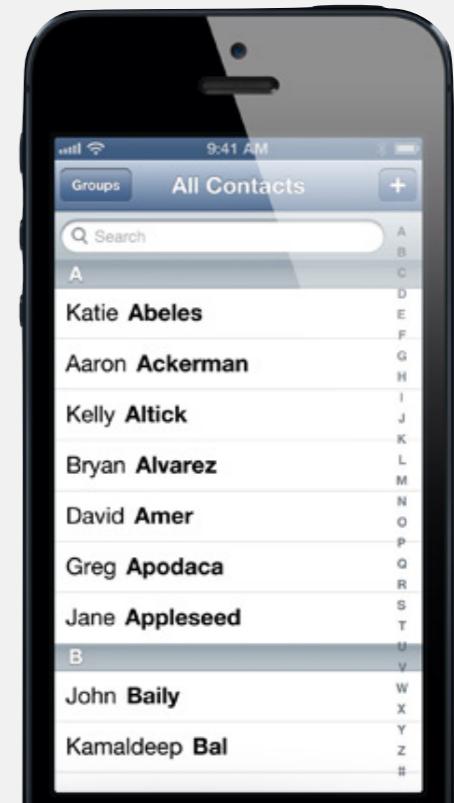

Library of Congress numbers

FedEx packages

contacts

Hogwarts houses

# Sample sort client 1

Goal. Sort **any** type of data.

Ex 1. Sort random real numbers in ascending order.

seems artificial (stay tuned for an application)

```
public class Experiment
{
    public static void main(String[] args)
    {
        int N = Integer.parseInt(args[0]);
        Double[] a = new Double[N];
        for (int i = 0; i < N; i++)
            a[i] = StdRandom.uniform();
        Insertion.sort(a);
        for (int i = 0; i < N; i++)
            StdOut.println(a[i]);
    }
}
```

```
% java Experiment 10
0.08614716385210452
0.09054270895414829
0.10708746304898642
0.21166190071646818
0.363292849257276
0.460954145685913
0.5340026311350087
0.7216129793703496
0.9003500354411443
0.9293994908845686
```

## Sample sort client 2

---

Goal. Sort **any** type of data.

Ex 2. Sort strings in alphabetical order.

```
public class StringSorter
{
    public static void main(String[] args)
    {
        String[] a = StdIn.readAllStrings();
        Insertion.sort(a);
        for (int i = 0; i < a.length; i++)
            StdOut.println(a[i]);
    }
}
```

```
% more words3.txt
bed bug dad yet zoo ... all bad yes
```

```
% java StringSorter < words3.txt
all bad bed bug dad ... yes yet zoo
[suppressing newlines]
```

## Sample sort client 3

---

Goal. Sort **any** type of data.

Ex 3. Sort the files in a given directory by filename.

```
import java.io.File;

public class FileSorter
{
    public static void main(String[] args)
    {
        File directory = new File(args[0]);
        File[] files = directory.listFiles();
        Insertion.sort(files);
        for (int i = 0; i < files.length; i++)
            StdOut.println(files[i].getName());
    }
}
```

```
% java FileSorter .
Insertion.class
Insertion.java
InsertionX.class
InsertionX.java
Selection.class
Selection.java
Shell.class
Shell.java
ShellX.class
ShellX.java
```

# Total order

---

Goal. Sort **any** type of data (for which sorting is well defined).

A **total order** is a binary relation  $\leq$  that satisfies:

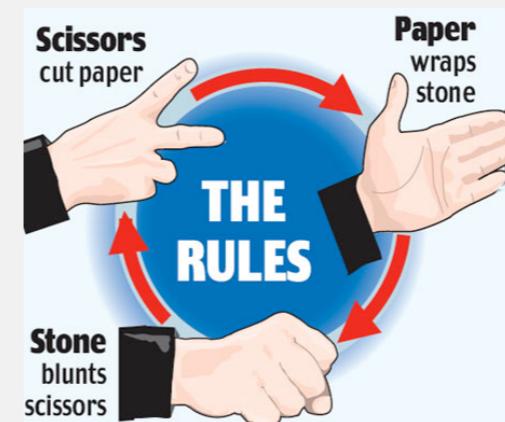

- Antisymmetry: if both  $v \leq w$  and  $w \leq v$ , then  $v = w$ .
- Transitivity: if both  $v \leq w$  and  $w \leq x$ , then  $v \leq x$ .
- Totality: either  $v \leq w$  or  $w \leq v$  or both.

Ex.

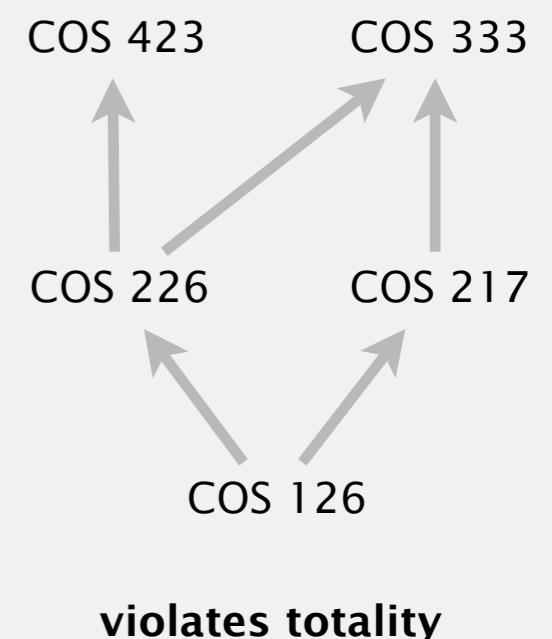

- Standard order for natural and real numbers.
- Chronological order for dates or times.
- Lexicographic order for strings.

Not transitive. Ro-sham-bo.

Not total. PU course prerequisites.

violates transitivity

violates totality

# Callbacks

---

Goal. Sort **any** type of data (for which sorting is well defined).

Q. How can sort() compare data of type Double, String, and java.io.File without hardwiring in type-specific information.

Callback = reference to executable code.

- Client passes array of objects to sort() function.
- The sort() function calls object's compareTo() method as needed.

Implementing callbacks.

- Java: interfaces.
- C: function pointers.
- C++: class-type functors.
- C#: delegates.
- Python, Perl, ML, Javascript: first-class functions.

# Callbacks: Java interfaces

**Interface.** Specifies a set of methods that a concrete class can provide.

```
public interface Comparable<Item>
{
    public int compareTo(Item that);
}
```

contract: one method  
with this signature  
and prescribed behavior

**Concrete class.** Can provide the set of methods in the interface.

```
public class String implements Comparable<String>
{
```

class promises to  
honor the contract

```
    ...
    public int compareTo(String that)
    {
        ...
    }
}
```

class honors  
the contract

**Impact.**

- You can treat any String object as an object of type Comparable.
- On a Comparable object, you can invoke (only) the compareTo() method.
- Enables **callbacks**.

"polymorphism"

# Callbacks: roadmap

## client (StringSorter.java)

```
public class StringSorter
{
    public static void main(String[] args)
    {
        String[] a = StdIn.readAllStrings();
        Insertion.sort(a);
        for (int i = 0; i < a.length; i++)
            StdOut.println(a[i]);
    }
}
```

## java.lang.Comparable interface

```
public interface Comparable<Item>
{
    public int compareTo(Item that);
}
```

## sort implementation (Insertion.java)

```
public static void sort(Comparable[] a)
{
    int N = a.length;
    for (int i = 0; i < N; i++)
        for (int j = i; j > 0; j--)
            if (a[j].compareTo(a[j-1]) < 0)
                exch(a, j, j-1);
            else break;
}
```

## data type implementation (String.java)

```
public class String
implements Comparable<String>
{
    ...
    public int compareTo(String that)
    {
        ...
    }
}
```

key point: no dependence  
on String data type

## Elementary sorts: quiz 1

---

Suppose that the Java architects leave out `implements Comparable<String>` in the class declaration for `String`. What would be the effect?

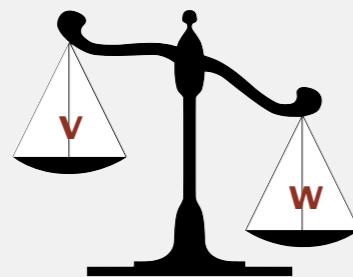

- A. `String.java` won't compile.
- B. `StringSorter.java` won't compile.
- C. `Insertion.java` won't compile.
- D. `Insertion.java` will throw a run-time exception.
- E. *I don't know.*

# java.lang.Comparable API

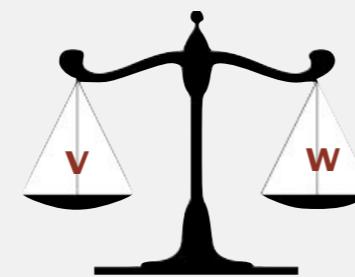

---

Implement `compareTo()` so that `v.compareTo(w)`

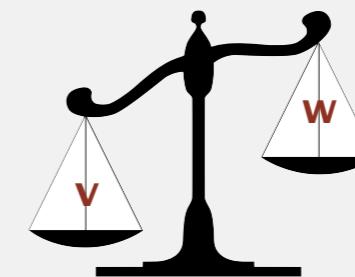

- Defines a total order.
- Returns a negative integer, zero, or positive integer if  $v$  is less than, equal to, or greater than  $w$ , respectively.
- Throws an exception if incompatible types (or either is null).

**less than**  
(return negative integer)

**equal to**  
(return 0)

**greater than**  
(return positive integer)

Built-in comparable types. Integer, Double, String, Date, File, ...

User-defined comparable types. Implement the Comparable interface.

# Implementing the Comparable interface

Date data type. Simplified version of java.util.Date.

```
public class Date implements Comparable<Date>
{
    private final int month, day, year;

    public Date(int m, int d, int y)
    {
        month = m;
        day   = d;
        year  = y;
    }

    public int compareTo(Date that)
    {
        if (this.year < that.year) return -1;
        if (this.year > that.year) return +1;
        if (this.month < that.month) return -1;
        if (this.month > that.month) return +1;
        if (this.day   < that.day)  return -1;
        if (this.day   > that.day)  return +1;
        return 0;
    }
}
```

only compare dates  
to other dates

# Algorithms

## 2.1 ELEMENTARY SORTS

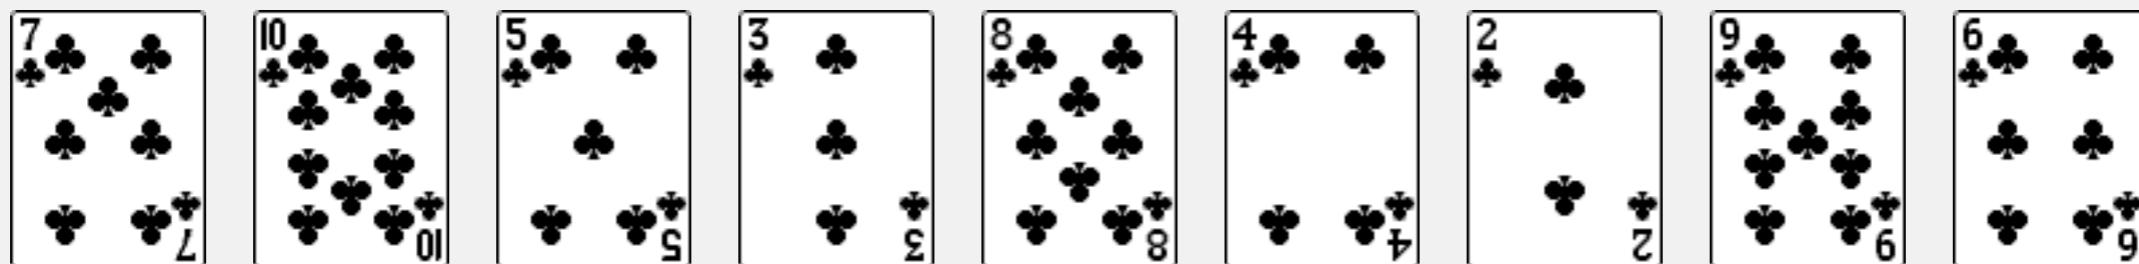

---

- ▶ *rules of the game*
- ▶ ***selection sort***
- ▶ *insertion sort*
- ▶ *shuffling*
- ▶ *comparators*

# Selection sort demo

---

- In iteration  $i$ , find index  $\text{min}$  of smallest remaining entry.
- Swap  $a[i]$  and  $a[\text{min}]$ .

initial

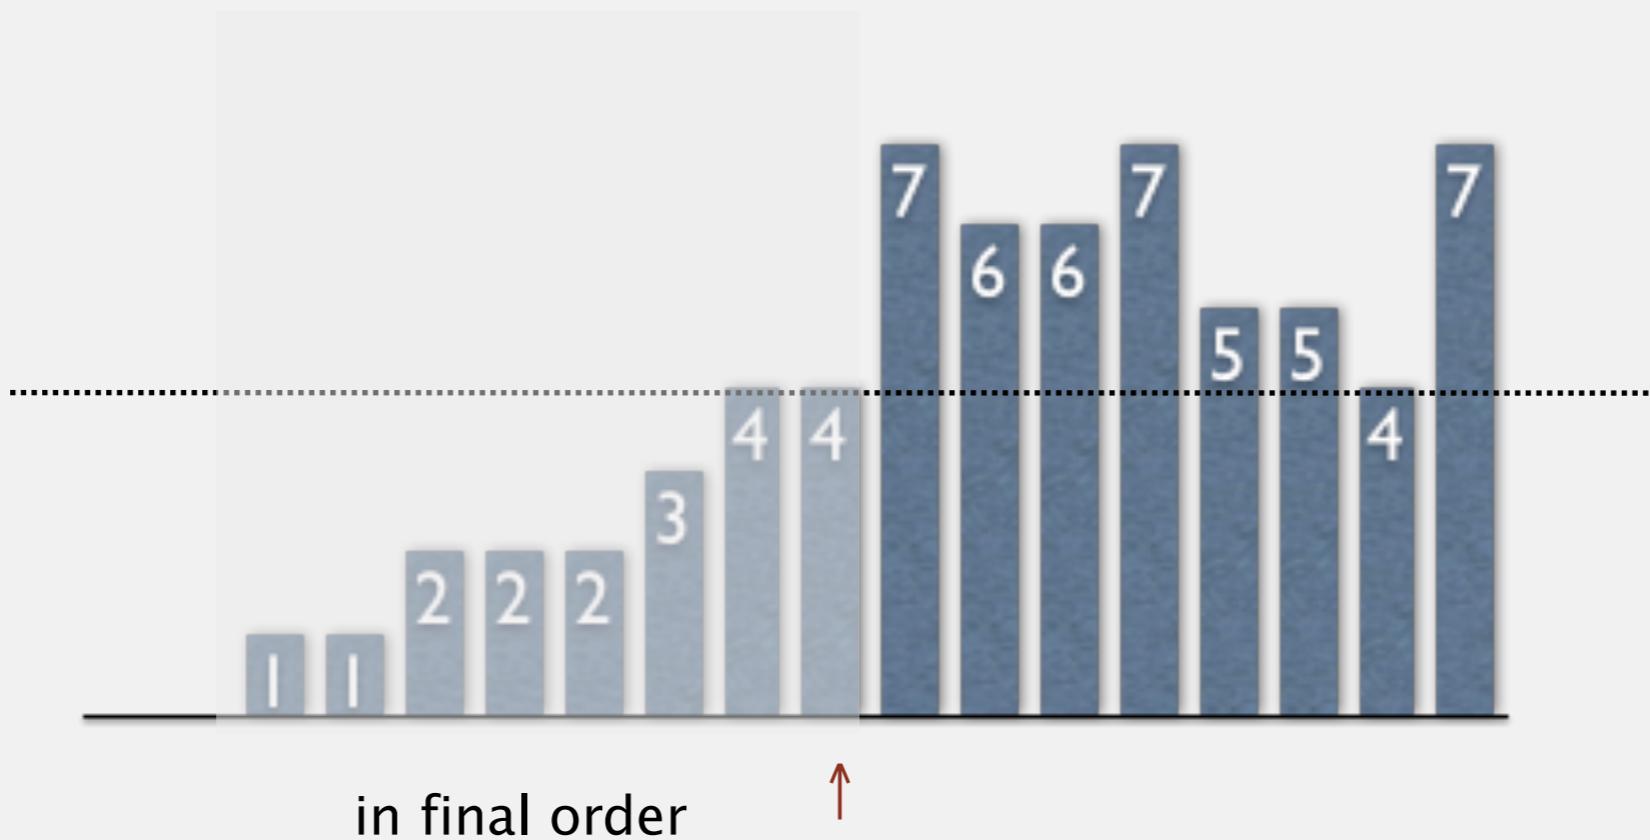

# Selection sort

---

Algorithm.  $\uparrow$  scans from left to right.

Invariants.

- Entries to the left of  $\uparrow$  (including  $\uparrow$ ) fixed and in ascending order.
- No entry to right of  $\uparrow$  is smaller than any entry to the left of  $\uparrow$ .

# Selection sort inner loop

To maintain algorithm invariants:

- Move the pointer to the right.

```
i++;
```

- Identify index of minimum entry on right.

```
int min = i;
for (int j = i+1; j < N; j++)
    if (less(a[j], a[min]))
        min = j;
```

- Exchange into position.

```
exch(a, i, min);
```

## Two useful sorting abstractions

---

**Helper functions.** Refer to data only through compares and exchanges.

**Less.** Is item  $v$  less than  $w$ ?

```
private static boolean less(Comparable v, Comparable w)
{   return v.compareTo(w) < 0; }
```

**Exchange.** Swap item in array  $a[]$  at index  $i$  with the one at index  $j$ .

```
private static void exch(Object[] a, int i, int j)
{
    Object swap = a[i];
    a[i] = a[j];
    a[j] = swap;
}
```

## Selection sort: Java implementation

---

```
public class Selection
{
    public static void sort(Comparable[] a)
    {
        int N = a.length;
        for (int i = 0; i < N; i++)
        {
            int min = i;
            for (int j = i+1; j < N; j++)
                if (less(a[j], a[min]))
                    min = j;
            exch(a, i, min);
        }
    }

    private static boolean less(Comparable v, Comparable w)
    { /* see previous slide */ }

    private static void exch(Object[] a, int i, int j)
    { /* see previous slide */ }
}
```

# Generic methods

---

**Oops.** The compiler complains.

```
% javac Selection.java
Note: Selection.java uses unchecked or unsafe operations.
Note: Recompile with -Xlint:unchecked for details.
```

```
% javac -Xlint:unchecked Selection.java
Selection.java:83: warning: [unchecked] unchecked call to
compareTo(T) as a member of the raw type java.lang.Comparable
    return (v.compareTo(w) < 0);
                           ^
1 warning
```

**Q.** How to fix?

# Generic methods

---

Pedantic (type-safe) version. Compiles cleanly.

generic type variable  
(type inferred from argument; must be Comparable)

```
public class SelectionPedantic
{
    public static <Key extends Comparable<Key>> void sort(Key[] a)
    { /* as before */ }

    private static <Key extends Comparable<Key>> boolean less(Key v, Key w)
    { /* as before */ }

    private static Object void exch(Object[] a, int i, int j)
    { /* as before */ }
}
```

<http://algs4.cs.princeton.edu/21elementary/SelectionPedantic.java.html>

Remark. Use type-safe version in system code (but not in lecture).

10	10	A	E	E	L	M	O	P	R	S	T	X
		A	E	E	L	M	O	P	R	S	T	X

Trace of selection sort (array contents just after each exchange)

**Running time insensitive to input.** Quadratic time, even if input is sorted.  
**Data movement is minimal.** Linear number of exchanges.

# Algorithms

ROBERT SEDGEWICK | KEVIN WAYNE

<http://algs4.cs.princeton.edu>

## 2.1 ELEMENTARY SORTS

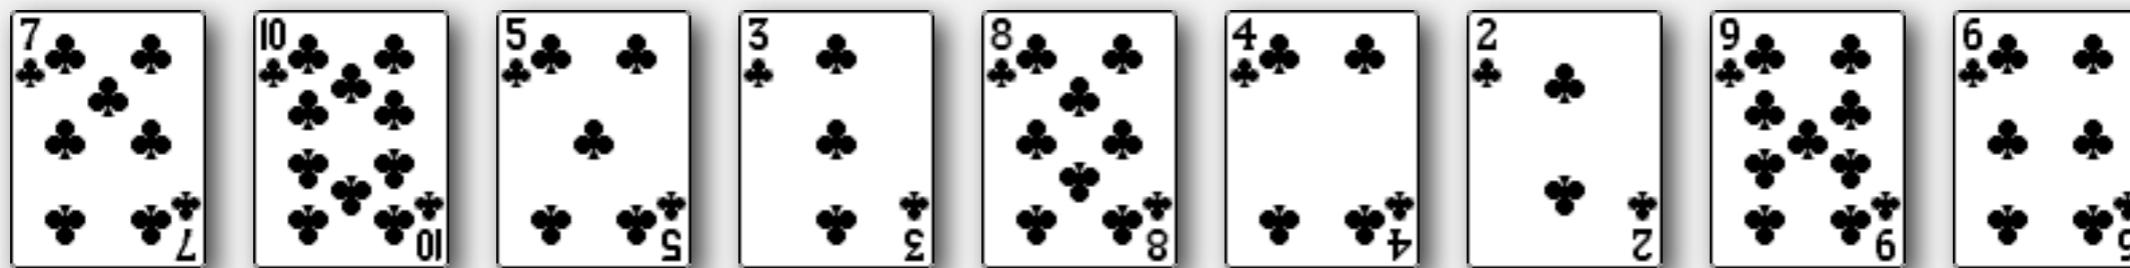

---

- ▶ *rules of the game*
- ▶ *selection sort*
- ▶ *insertion sort*
- ▶ *shuffling*
- ▶ *comparators*

## Insertion sort demo

---

- In iteration  $i$ , swap  $a[i]$  with each larger entry to its left.

# Insertion sort

---

Algorithm.  $\uparrow$  scans from left to right.

## Invariants.

- Entries to the left of  $\uparrow$  (including  $\uparrow$ ) are in ascending order.
- Entries to the right of  $\uparrow$  have not yet been seen.

## Insertion sort: inner loop

To maintain algorithm invariants:

- Move the pointer to the right.

```
i++;
```

- Moving from right to left, exchange  $a[i]$  with each larger entry to its left.

```
for (int j = i; j > 0; j--)  
    if (less(a[j], a[j-1]))  
        exch(a, j, j-1);  
    else break;
```

## Insertion sort: Java implementation

---

```
public class Insertion
{
    public static void sort(Comparable[] a)
    {
        int N = a.length;
        for (int i = 0; i < N; i++)
            for (int j = i; j > 0; j--)
                if (less(a[j], a[j-1]))
                    exch(a, j, j-1);
                else break;
    }

    private static boolean less(Comparable v, Comparable w)
    { /* as before */ }

    private static void exch(Object[] a, int i, int j)
    { /* as before */ }
}
```

<http://algs4.cs.princeton.edu/21elementary/Insertion.java.html>

# Insertion sort: animation

---

6	0	A	E	0	R	S	T	X	M	P	L	E
7	2	A	E	M	0	R	S	T	X	P	L	E
8	4	A	E	M	O	P	R	S	T	X	L	E
9	2	A	E	L	M	O	P	R	S	T	X	E
10	2	A	E	E	L	M	O	P	R	S	T	X
		A	E	E	L	M	O	P	R	S	T	X

Trace of insertion sort (array contents just after each insertion)

## Elementary sorts: quiz 2

---

How many compares does insertion sort make to sort an array of  $N$  distinct keys in reverse order?

- A.  $\sim N$
- B.  $\sim 1/4 N^2$
- C.  $\sim 1/2 N^2$
- D.  $\sim N^2$
- E. *I don't know.*

## Insertion sort: analysis

---

**Worst case.** If the array is in descending order (and no duplicates), insertion sort makes  $\sim \frac{1}{2} N^2$  compares and  $\sim \frac{1}{2} N^2$  exchanges.

X T S R P O M L F E A

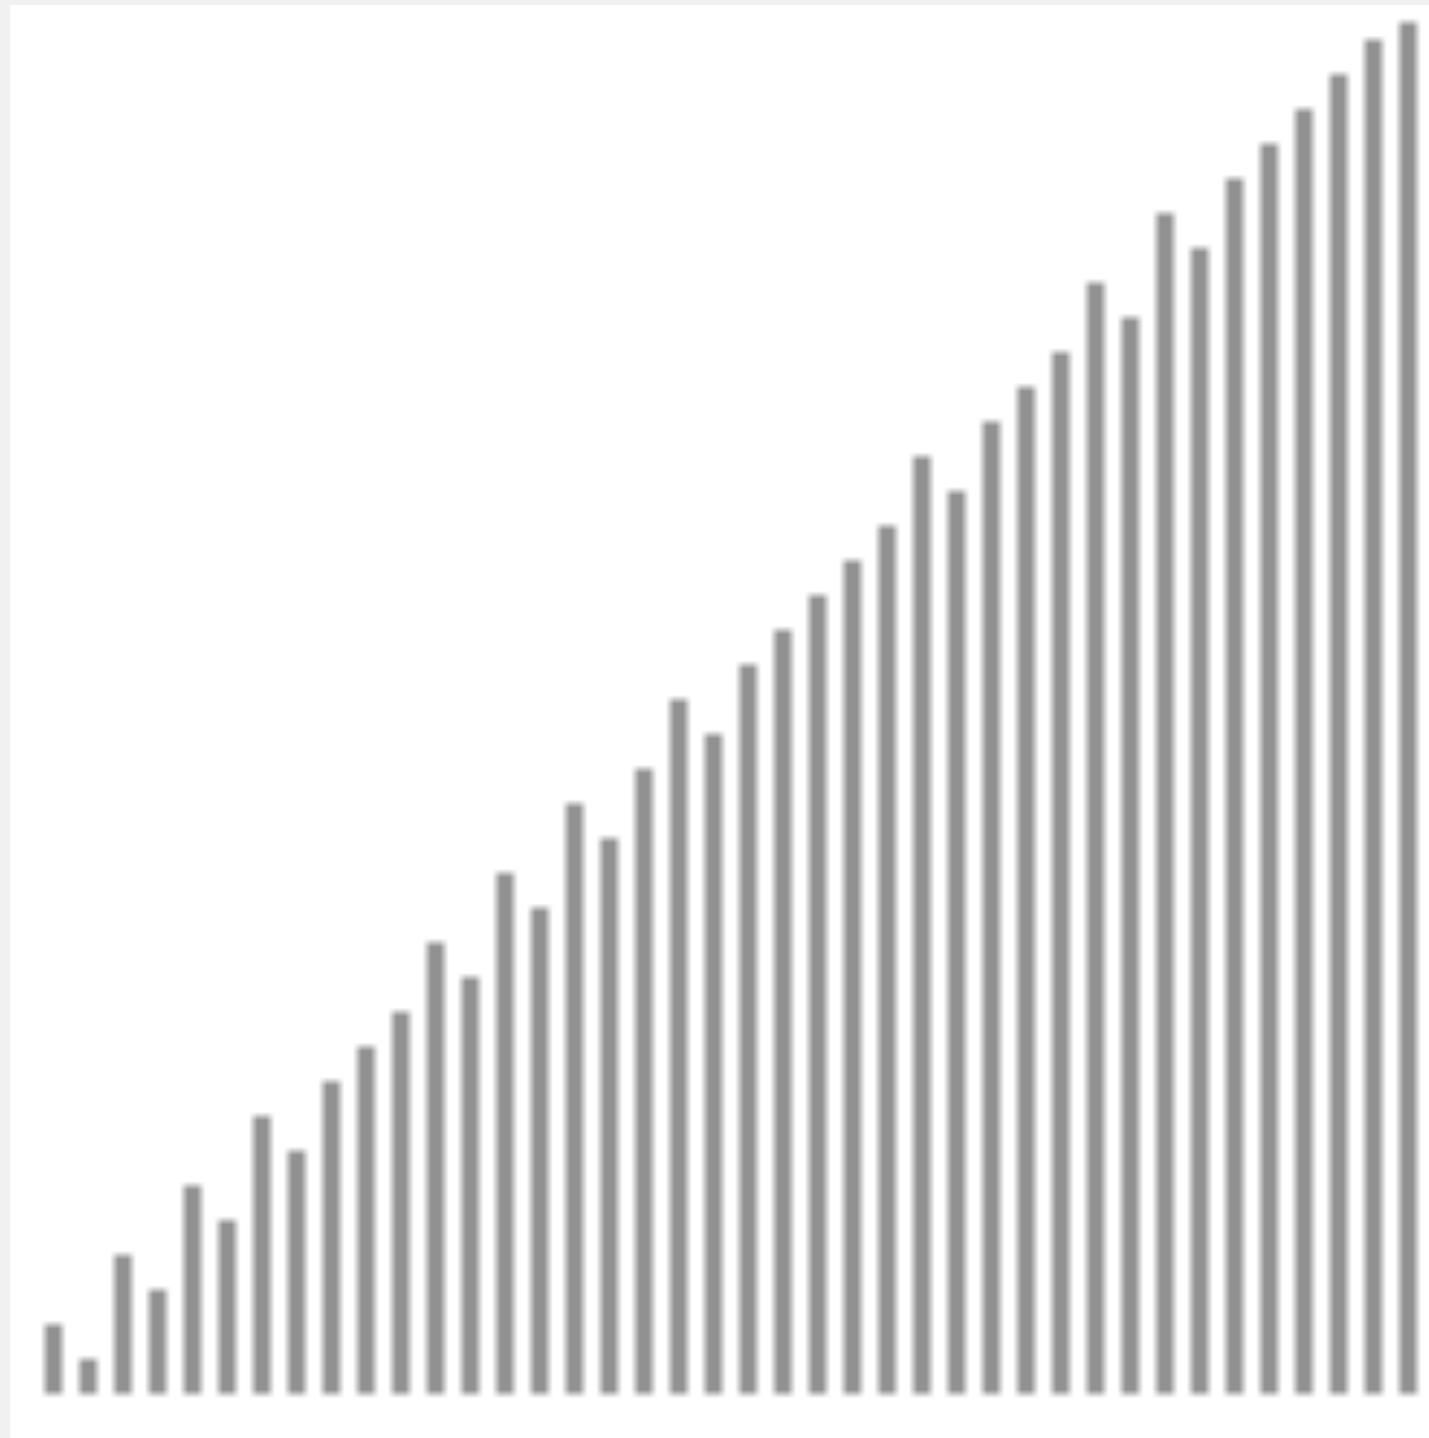

**Best case.** If the array is in ascending order, insertion sort makes  $N-1$  compares and 0 exchanges.

A E E L M O P R S T X

# Insertion sort: animation

---

40 partially-sorted items

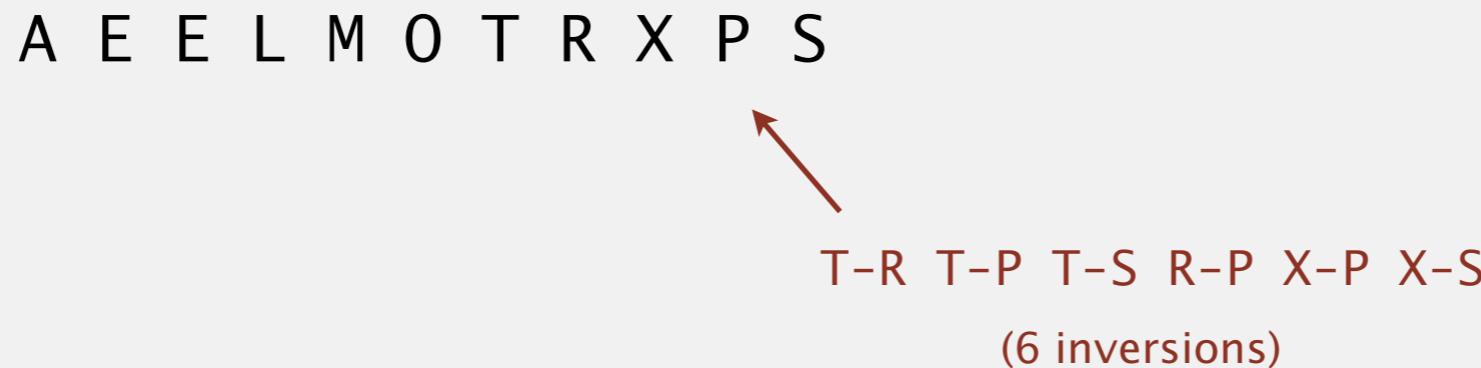

- ▲ algorithm position
- in order
- not yet seen

## Insertion sort: partially-sorted arrays

---

Def. An **inversion** is a pair of keys that are out of order.

Def. An array is **partially sorted** if the number of inversions is  $\leq c N$ .

- Ex 1. A sorted array has 0 inversions.
- Ex 2. A subarray of size 10 appended to a sorted subarray of size  $N$ .

**Proposition.** For partially-sorted arrays, insertion sort runs in linear time.

**Pf.** Number of exchanges equals the number of inversions.

$$\text{number of compares} \leq \text{exchanges} + (N - 1)$$

↑

## Insertion sort: practical improvements

---

**Half exchanges.** Shift items over (instead of exchanging).

- Eliminates unnecessary data movement.
- No longer uses only `less()` and `exch()` to access data.

A C H H I M N N P Q X Y K B I N A R Y

**Binary insertion sort.** Use binary search to find insertion point.

- Number of compares  $\sim N \lg N$ .
- But still a quadratic number of array accesses.

A C H H I M N N P Q X Y K B I N A R Y

binary search for first key > K

## Elementary sorts: quiz 3

---

Which is faster in practice, selection sort or insertion sort?

- A. Selection sort.
- B. Insertion sort.
- C. No significant difference.
- D. *I don't know.*

# Algorithms

## War story (Microsoft)

---

Microsoft antitrust probe by EU. Microsoft agreed to provide a randomized ballot screen for users to select browser in Windows 7.

Solution? Implement shuffle sort by making comparator always return a random answer.

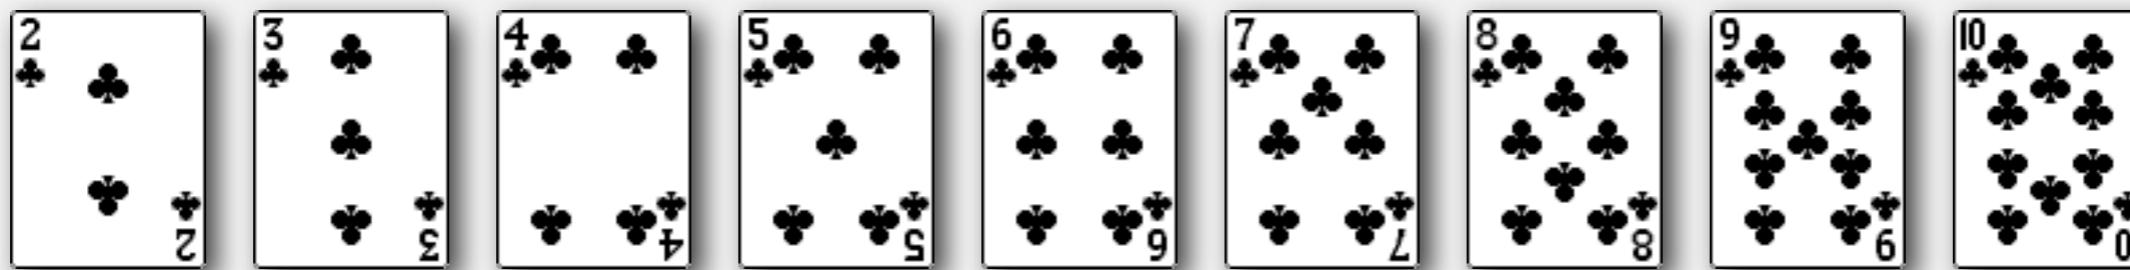

```
public int compareTo(Browser that)
{
    double r = Math.random();
    if (r < 0.5) return -1;
    if (r > 0.5) return +1;
    return 0;
}
```

← browser comparator  
(should implement a total order)

# Knuth shuffle demo

---

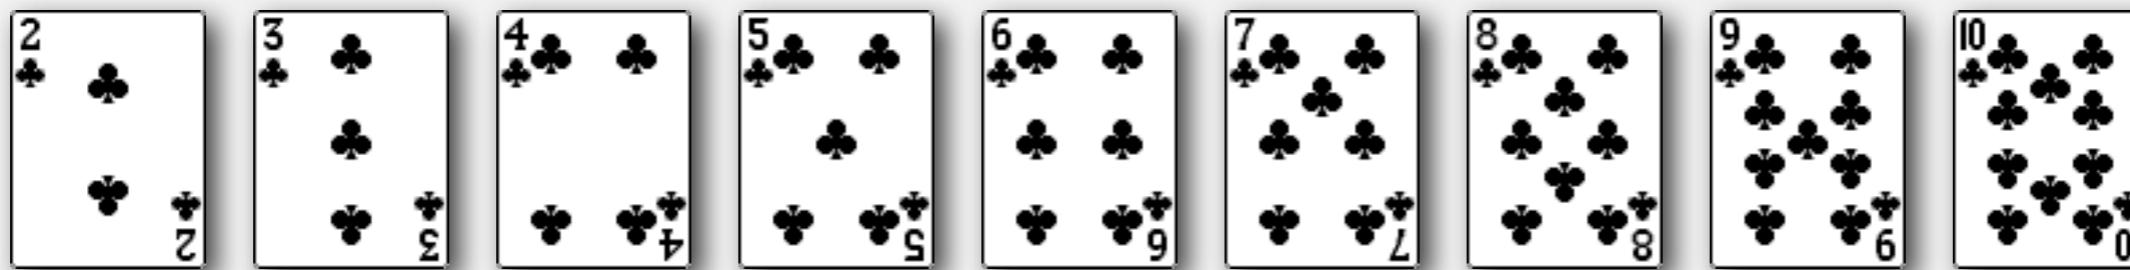

- In iteration  $i$ , pick integer  $r$  between 0 and  $i$  uniformly at random.
- Swap  $a[i]$  and  $a[r]$ .

# Knuth shuffle

---

- In iteration  $i$ , pick integer  $r$  between 0 and  $i$  uniformly at random.
- Swap  $a[i]$  and  $a[r]$ .

**Proposition.** [Fisher-Yates 1938] Knuth shuffling algorithm produces a uniformly random permutation of the input array in linear time.

→  
assuming integers  
uniformly at random

# Knuth shuffle

---

- In iteration  $i$ , pick integer  $r$  between 0 and  $i$  uniformly at random.
- Swap  $a[i]$  and  $a[r]$ .

common bug: between 0 and  $N - 1$   
correct variant: between  $i$  and  $N - 1$

```
public class Knuth
{
    public static void shuffle(Object[] a)
    {
        int N = a.length;
        for (int i = 0; i < N; i++)
        {
            int r = StdRandom.uniform(i + 1); ← between 0 and i
            exch(a, i, r);
        }
    }
}
```

<http://algs4.cs.princeton.edu/11model/Knuth.java.html>

# Broken Knuth shuffle

---

Q. What happens if integer is chosen between 0 and  $N-1$  ?

A. Not uniformly random!

instead of  
between 0 and  $i$

permutation	Knuth shuffle	broken shuffle
A B C	1/6	4/27
A C B	1/6	5/27
B A C	1/6	5/27
B C A	1/6	5/27
C A B	1/6	4/27
C B A	1/6	4/27

probability of each permutation when shuffling { A, B, C }

# War story (online poker)

Texas hold'em poker. Software must shuffle electronic cards.

How We Learned to Cheat at Online Poker: A Study in Software Security

[http://www.digital.com/papers/download/developer\\_gambling.php](http://www.digital.com/papers/download/developer_gambling.php)

# War story (online poker)

---

Shuffling algorithm in FAQ at [www.planetpoker.com](http://www.planetpoker.com)

```
for i := 1 to 52 do begin
    r := random(51) + 1; ← between 1 and 51
    swap := card[r];
    card[r] := card[i];
    card[i] := swap;
end;
```

- Bug 1. Random number r never 52  $\Rightarrow$  52<sup>nd</sup> card can't end up in 52<sup>nd</sup> place.
- Bug 2. Shuffle not uniform (should be between 1 and i).
- Bug 3. random() uses 32-bit seed  $\Rightarrow$   $2^{32}$  possible shuffles.
- Bug 4. Seed = milliseconds since midnight  $\Rightarrow$  86.4 million shuffles.

*“The generation of random numbers is too important to be left to chance.”*

— Robert R. Coveyou

# War story (online poker)

---

Best practices for shuffling (if your business depends on it).

- Use a hardware random-number generator that has passed both the FIPS 140-2 and the NIST statistical test suites.
- Continuously monitor statistic properties:  
hardware random-number generators are fragile and fail silently.
- Use an unbiased shuffling algorithm.

RANDOM.ORG

Bottom line. Shuffling a deck of cards is hard!

# Sort music library by song name

---

The screenshot shows a music library interface with a list of songs. The list is sorted by song name. The selected song is 'Beds Of Roses' by Bon Jovi from the album 'Cross Road'. The interface includes album art for various artists like Bon Jovi, Pearl Jam, and Blondie.

	Name	Artist	Time	Album
1	Alive	Pearl Jam	5:41	Ten
2	All Over The World	Pixies	5:27	Bossanova
3	All Through The Night	Cyndi Lauper	4:30	She's So Unusual
4	Allison Road	Gin Blossoms	3:19	New Miserable Experience
5	Ama, Ama, Ama Y Ensancha El ...	Extremoduro	2:34	Deltoya (1992)
6	And We Danced	Hooters	3:50	Nervous Night
7	As I Lay Me Down	Sophie B. Hawkins	4:09	Whaler
8	Atomic	Blondie	3:50	Atomic: The Very Best Of Blondie
9	Automatic Lover	Jay-Jay Johanson	4:19	Antenna
10	Baba O'Riley	The Who	5:01	Who's Better, Who's Best
11	Beautiful Life	Ace Of Base	3:40	The Bridge
12	<input checked="" type="checkbox"/> Beds Of Roses	Bon Jovi	6:35	Cross Road
13	Black	Pearl Jam	5:44	Ten
14	Bleed American	Jimmy Eat World	3:04	Bleed American
15	Borderline	Madonna	4:00	The Immaculate Collection
16	Born To Run	Bruce Springsteen	4:30	Born To Run
17	Both Sides Of The Story	Phil Collins	6:43	Both Sides
18	Bouncing Around The Room	Phish	4:09	A Live One (Disc 1)
19	Boys Don't Cry	The Cure	2:35	Staring At The Sea: The Singles 1979–1985
20	Brat	Green Day	1:43	Insomniac
21	Breakdown	Deerheart	3:40	Deerheart
22	Bring Me To Life (Kevin Roen Mix)	Evanescence Vs. Pa...	9:48	
23	Californication	Red Hot Chili Pepp...	1:40	
24	Call Me	Blondie	3:33	Atomic: The Very Best Of Blondie

26	Celebration	Kool & The Gang	3:45	Time Life Music Sounds Of The Seventies – C
27	Chakna Chakna	Surjit Bindrakhia	5:11	Bombay Dreams

# Comparable interface: review

Comparable interface: sort using a type's **natural order**.

```
public class Date implements Comparable<Date>
{
    private final int month, day, year;

    public Date(int m, int d, int y)
    {
        month = m;
        day   = d;
        year  = y;
    }
    ...
    public int compareTo(Date that)
    {
        if (this.year < that.year) return -1;
        if (this.year > that.year) return +1;
        if (this.month < that.month) return -1;
        if (this.month > that.month) return +1;
        if (this.day   < that.day)  return -1;
        if (this.day   > that.day)  return +1;
        return 0;
    }
}
```

natural order

# Comparator interface

Comparator interface: sort using an **alternate order**.

```
public interface Comparator<Item>
{
    public int compare(Item v, Item w);
}
```

Required property. Must be a **total order**.

string order	example
<b>natural order</b>	Now is the time
<b>case insensitive</b>	is Now the time
<b>Spanish language</b>	café cafetero cuarto churro nube ñoño
<b>British phone book</b>	McKinley Mackintosh

pre-1994 order for  
digraphs ch and ll and rr

# Comparator interface: system sort

To use with Java system sort:

- Create Comparator object.
- Pass as second argument to `Arrays.sort()`.

```
String[] a;           uses natural order
...
Arrays.sort(a);
...
Arrays.sort(a, String.CASE_INSENSITIVE_ORDER);
...
Arrays.sort(a, Collator.getInstance(new Locale("es")));
...
Arrays.sort(a, new BritishPhoneBookOrder());
...
```

The diagram illustrates the use of the Comparator interface in Java's Arrays.sort() method. It shows five examples of sorting arrays. Red arrows point from the first two examples to the text "uses natural order". Red arrows point from the last three examples to the text "uses alternate order defined by Comparator<String> object".

**Bottom line.** Decouples the definition of the data type from the definition of what it means to compare two objects of that type.

# Comparator interface: using with our sorting libraries

---

To support comparators in our sort implementations:

- Pass Comparator to both sort() and less(), and use it in less().
- Use Object instead of Comparable.

```
import java.util.Comparator;

public class Insertion
{
    ...

    public static void sort(Object[] a, Comparator comparator)
    {
        int N = a.length;
        for (int i = 0; i < N; i++)
            for (int j = i; j > 0 && less(comparator, a[j], a[j-1]); j--)
                exch(a, j, j-1);
    }

    private static boolean less(Comparator comparator, Object v, Object w)
    { return comparator.compare(v, w) < 0; }
}
```

# Comparator interface: implementing

To implement a comparator:

- Define a (nested) class that implements the Comparator interface.
- Implement the compare() method.
- Provide client access to Comparator.

```
import java.util.Comparator;

public class Student
{
    private final String name;
    private final int section;
    ...

    public static Comparator<Student> byNameOrder()
    {   return new NameOrder();   }

    private static class NameOrder implements Comparator<Student>
    {
        public int compare(Student v, Student w)
        {   return v.name.compareTo(w.name);   }
    }

    ...
}
```

one Comparator for the class

The diagram consists of two red arrows. One arrow points from the text "one Comparator for the class" to the word "static" in the line "public static Comparator<Student> byNameOrder()". Another arrow points from the same text to the word "static" in the line "private static class NameOrder implements Comparator<Student>".

# Comparator interface: implementing

---

## To implement a comparator:

- Define a (nested) class that implements the Comparator interface.
- Implement the compare() method.
- Provide client access to Comparator.

```
import java.util.Comparator;

public class Student
{
    private final String name;
    private final int section;
    ...

    public static Comparator<Student> bySectionOrder()
    {   return new SectionOrder();   }

    private static class SectionOrder implements Comparator<Student>
    {
        public int compare(Student v, Student w)
        {   return v.section - w.section;   }
    }
    ...
}
```

this trick works here  
since no danger of overflow

# Comparator interface: implementing

---

To implement a comparator:

- Define a (nested) class that implements the Comparator interface.
- Implement the compare() method.
- Provide client access to Comparator.

`Insertion.sort(a, Student.byNameOrder());`

Andrews	3	A	(664) 480-0023	097 Little

Gazsi	4	B	(800) 867-5309	101 Brown

# Stability

---

A typical application. First, sort by name; **then** sort by section.

`Selection.sort(a, Student.byNameOrder());`

Andrews	3	A	(664) 480-0023	097 Little
Battle	4	C	(874) 088-1212	121 Whitman
Chen	3	A	(991) 878-4944	308 Blair
Fox	3	A	(884) 232-5341	11 Dickinson
Furia	1	A	(766) 093-9873	101 Brown
Gazsi	4	B	(800) 867-5309	101 Brown
Kanaga	3	B	(898) 122-9643	22 Brown
Rohde	2	A	(232) 343-5555	343 Forbes

`Selection.sort(a, Student.bySectionOrder());`

Furia	1	A	(766) 093-9873	101 Brown
Rohde	2	A	(232) 343-5555	343 Forbes
Chen	3	A	(991) 878-4944	308 Blair
Fox	3	A	(884) 232-5341	11 Dickinson
Andrews	3	A	(664) 480-0023	097 Little
Kanaga	3	B	(898) 122-9643	22 Brown
Gazsi	4	B	(800) 867-5309	101 Brown
Battle	4	C	(874) 088-1212	121 Whitman

@#%&@! Students in section 3 no longer sorted by name.

A **stable** sort preserves the relative order of items with equal keys.

## Elementary sorts: quiz 4

---

Which sorting algorithms are stable?

- A. Selection sort.
- B. Insertion sort.
- C. Both A and B.
- D. Neither A nor B.
- E. *I don't know.*

## Stability: insertion sort

Proposition. Insertion sort is **stable**.

```
public class Insertion
{
    public static void sort(Comparable[] a)
    {
        int N = a.length;
        for (int i = 0; i < N; i++)
            for (int j = i; j > 0 && less(a[j], a[j-1]); j--)
                exch(a, j, j-1);
    }
}
```

i	j	0	1	2	3	4
0	0	B <sub>1</sub>	A <sub>1</sub>	A <sub>2</sub>	A <sub>3</sub>	B <sub>2</sub>
1	0	A <sub>1</sub>	B <sub>1</sub>	A <sub>2</sub>	A <sub>3</sub>	B <sub>2</sub>
2	1	A <sub>1</sub>	A <sub>2</sub>	B <sub>1</sub>	A <sub>3</sub>	B <sub>2</sub>
3	2	A <sub>1</sub>	A <sub>2</sub>	A <sub>3</sub>	B <sub>1</sub>	B <sub>2</sub>
4	4	A <sub>1</sub>	A <sub>2</sub>	A <sub>3</sub>	B <sub>1</sub>	B <sub>2</sub>
		A <sub>1</sub>	A <sub>2</sub>	A <sub>3</sub>	B <sub>1</sub>	B <sub>2</sub>

Pf. Equal items never move past each other.

## Stability: selection sort

Proposition. Selection sort is **not stable**.

```
public class Selection
{
    public static void sort(Comparable[] a)
    {
        int N = a.length;
        for (int i = 0; i < N; i++)
        {
            int min = i;
            for (int j = i+1; j < N; j++)
                if (less(a[j], a[min]))
                    min = j;
            exch(a, i, min);
        }
    }
}
```

i	min	0	1	2
0	2	B <sub>1</sub>	B <sub>2</sub>	A
1	1	A	B <sub>2</sub>	B <sub>1</sub>
2	2	A	B <sub>2</sub>	B <sub>1</sub>
		A	B <sub>2</sub>	B <sub>1</sub>

Pf by counterexample. Long-distance exchange can move one equal item past another one.
