Edmonds branching algorithm demo

input digraph $G = (V, E)$

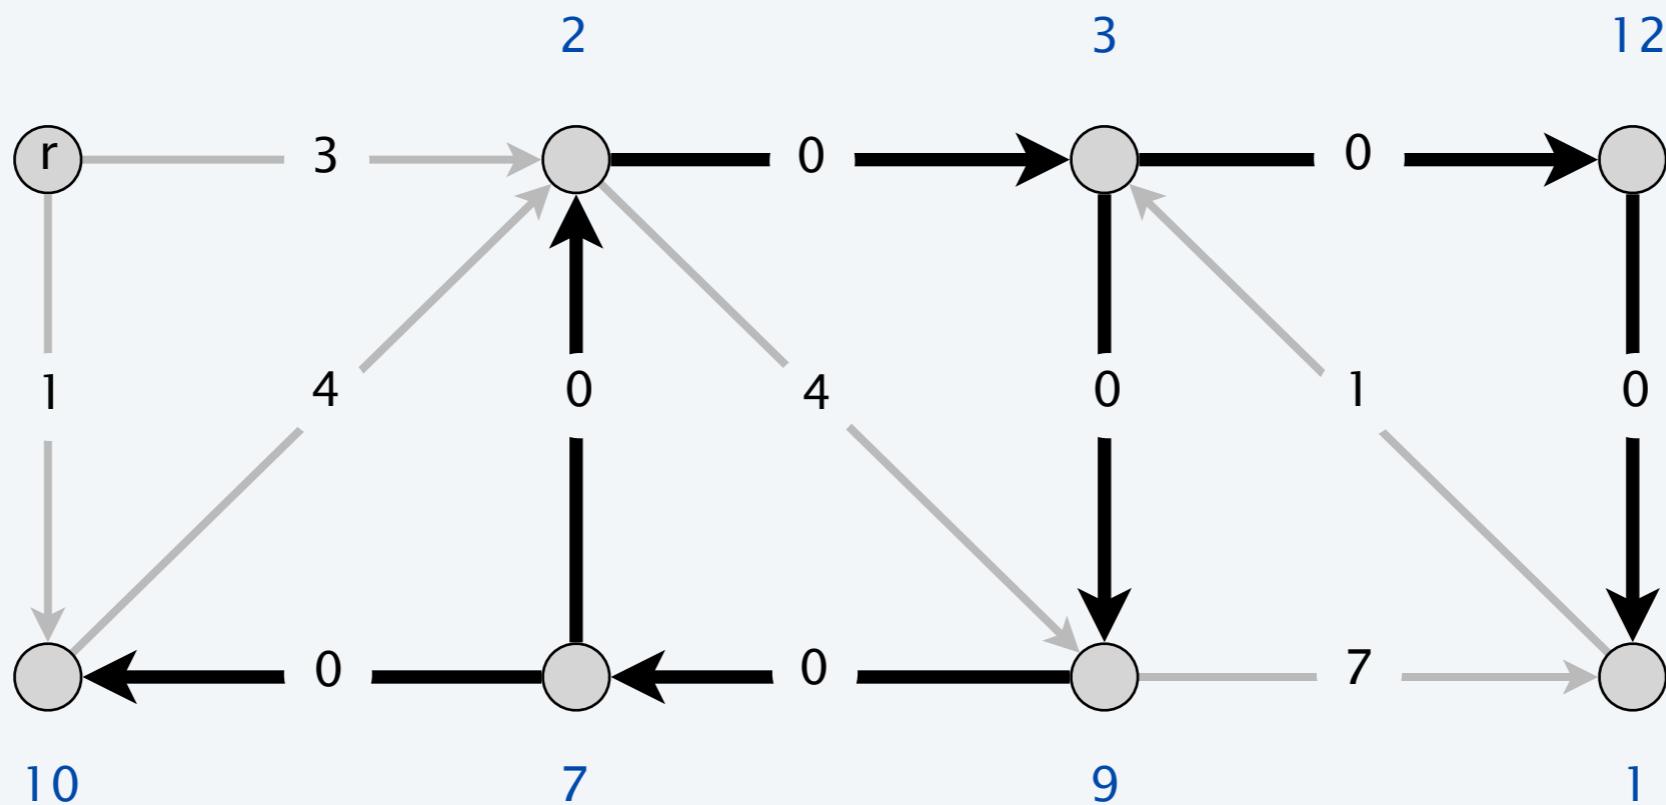

Edmonds branching algorithm demo

Phase 1: find cheapest edge entering each node

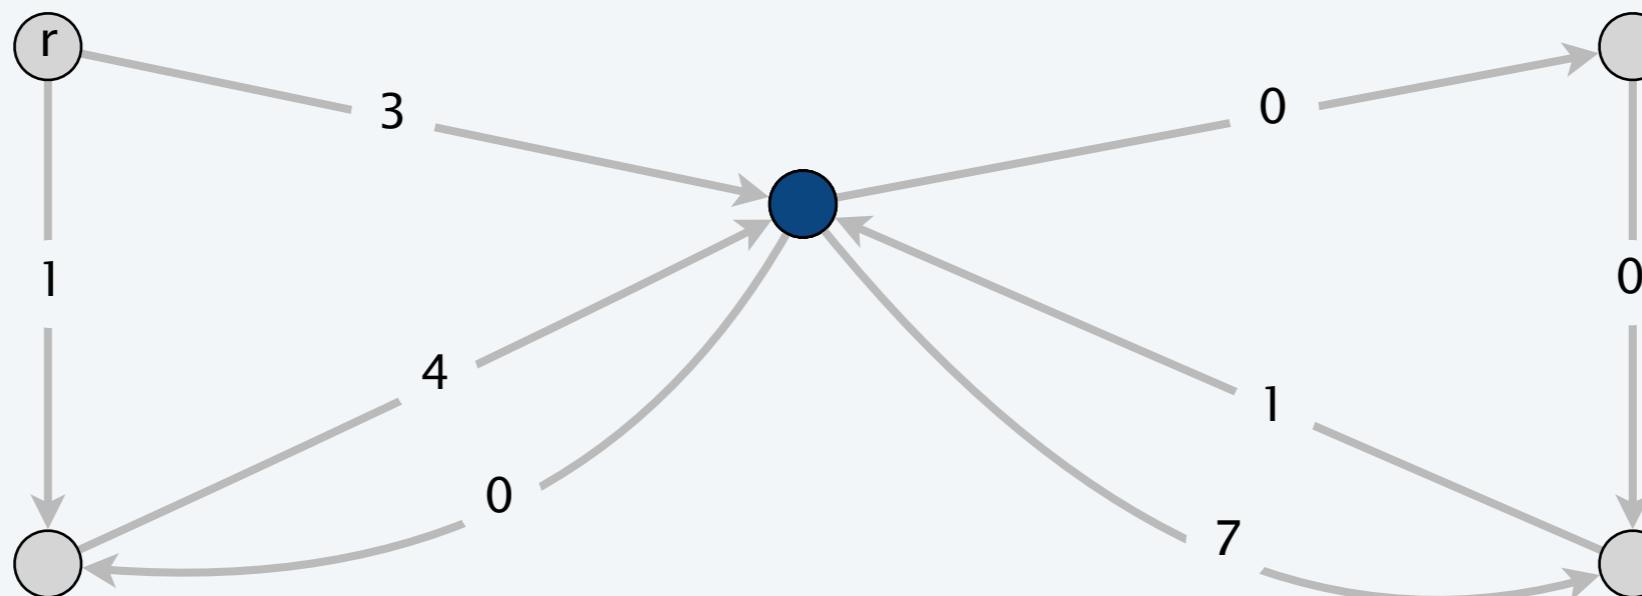

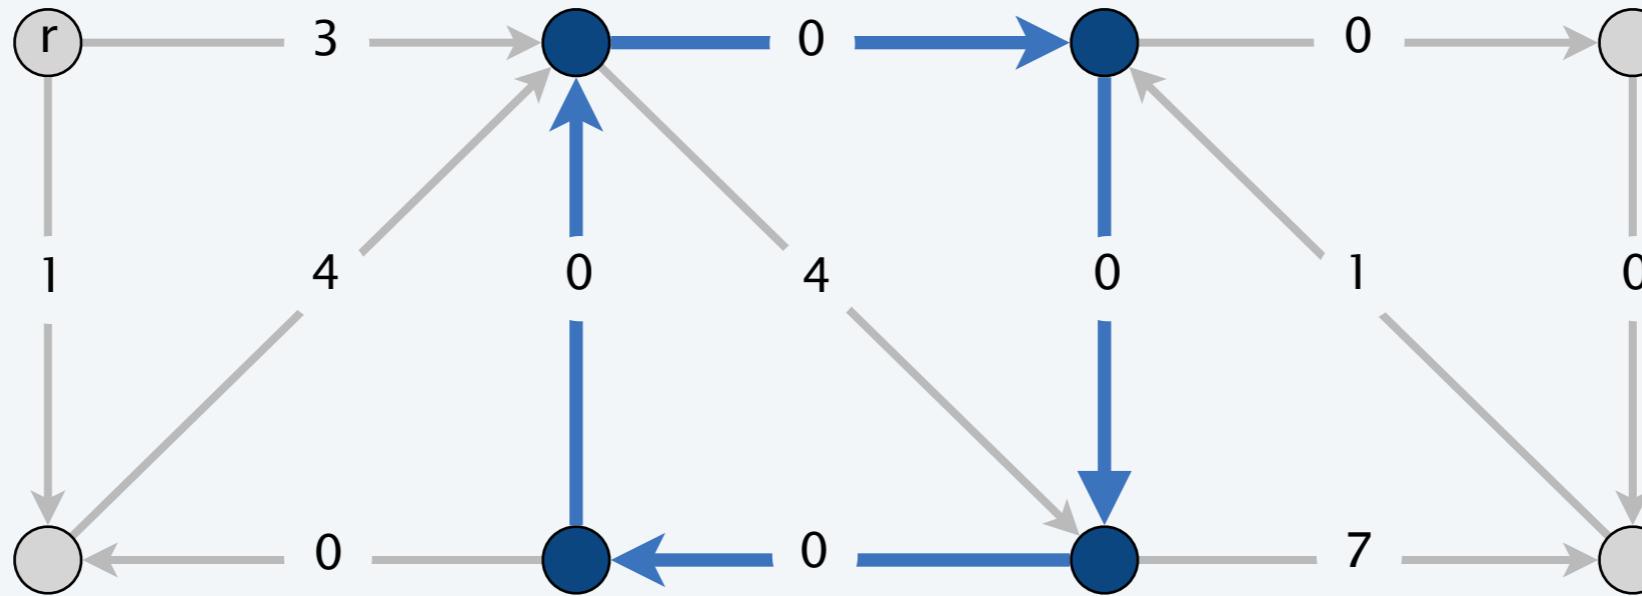

Edmonds branching algorithm demo

Phase 1: replace costs with reduced costs

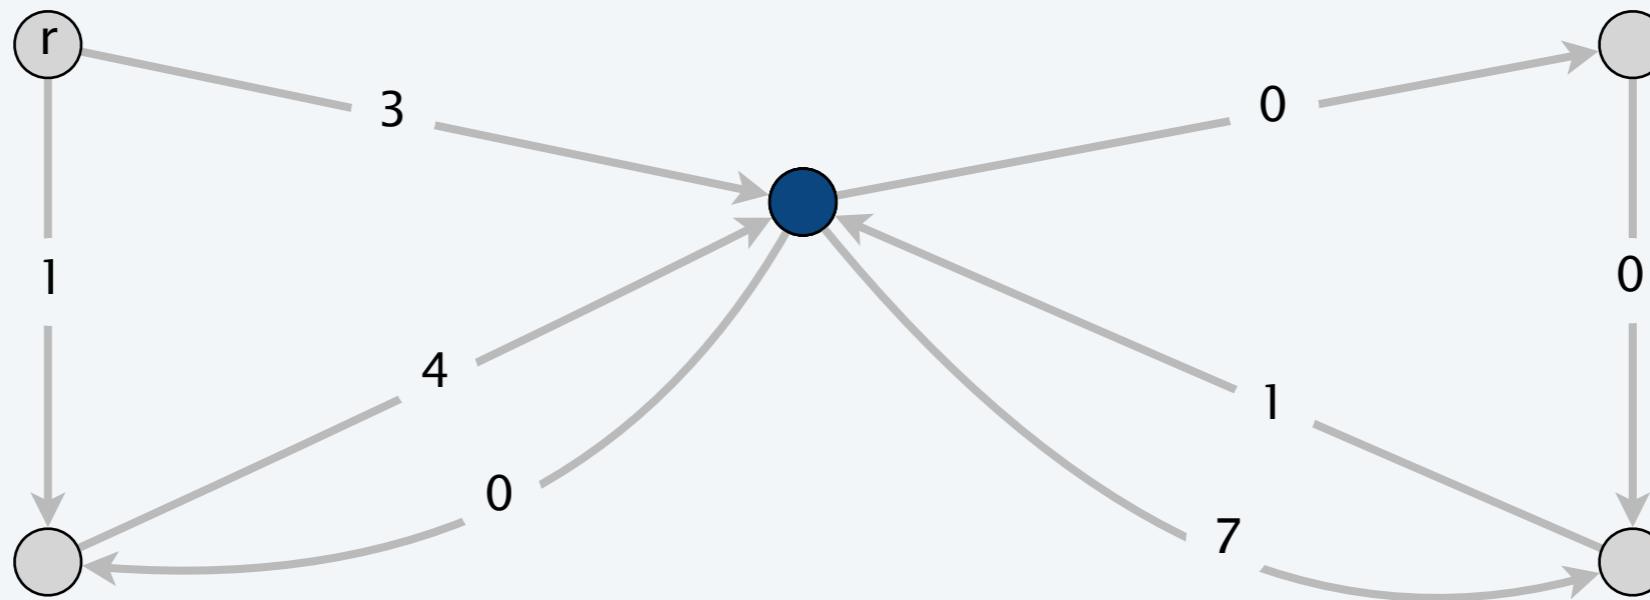

Edmonds branching algorithm demo

Phase 1: find 0-cost directed cycle C and contract

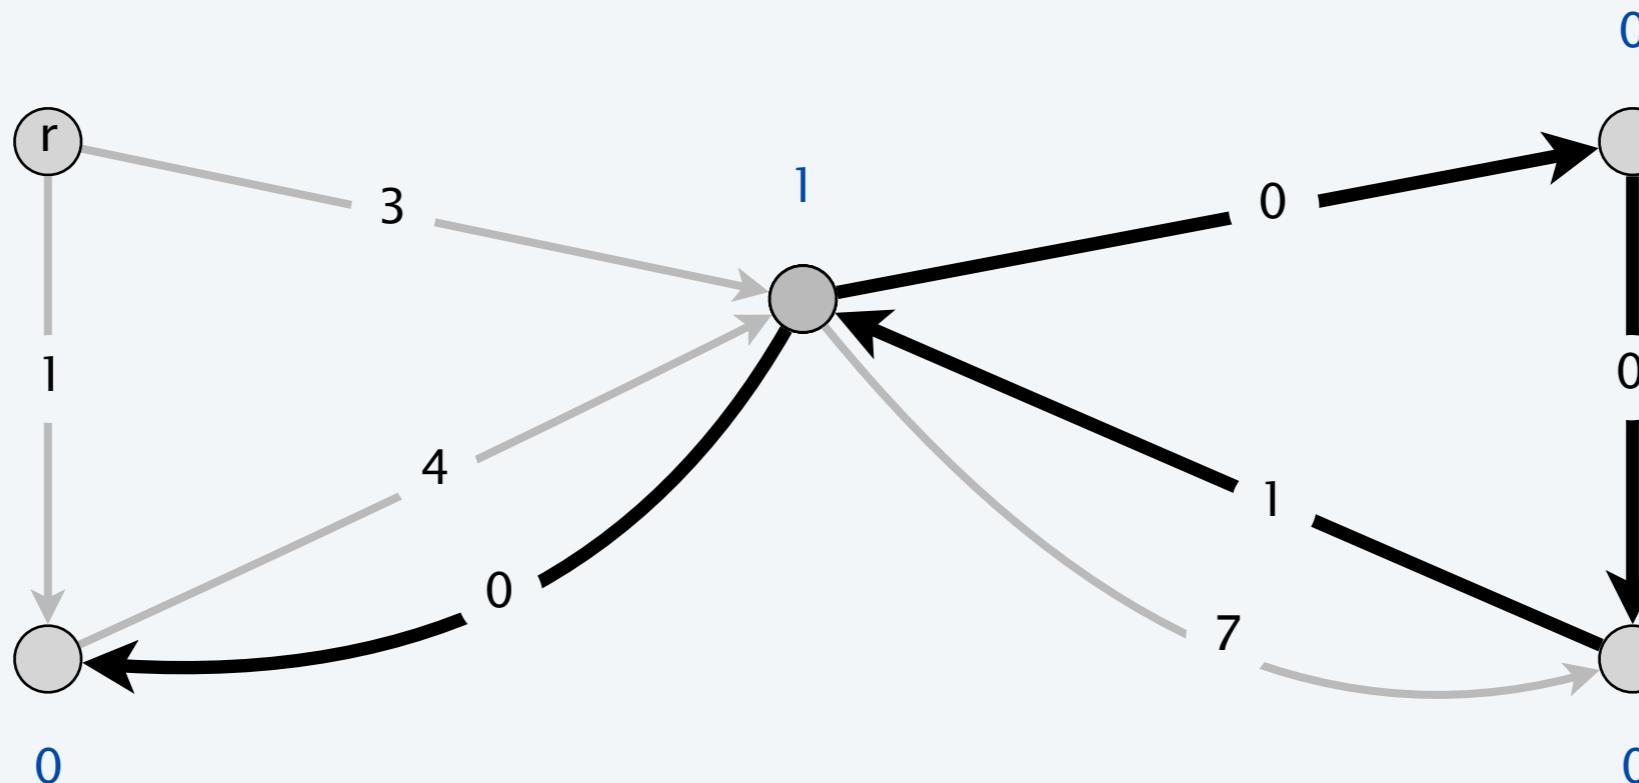

Edmonds branching algorithm demo

Phase 2: digraph G'

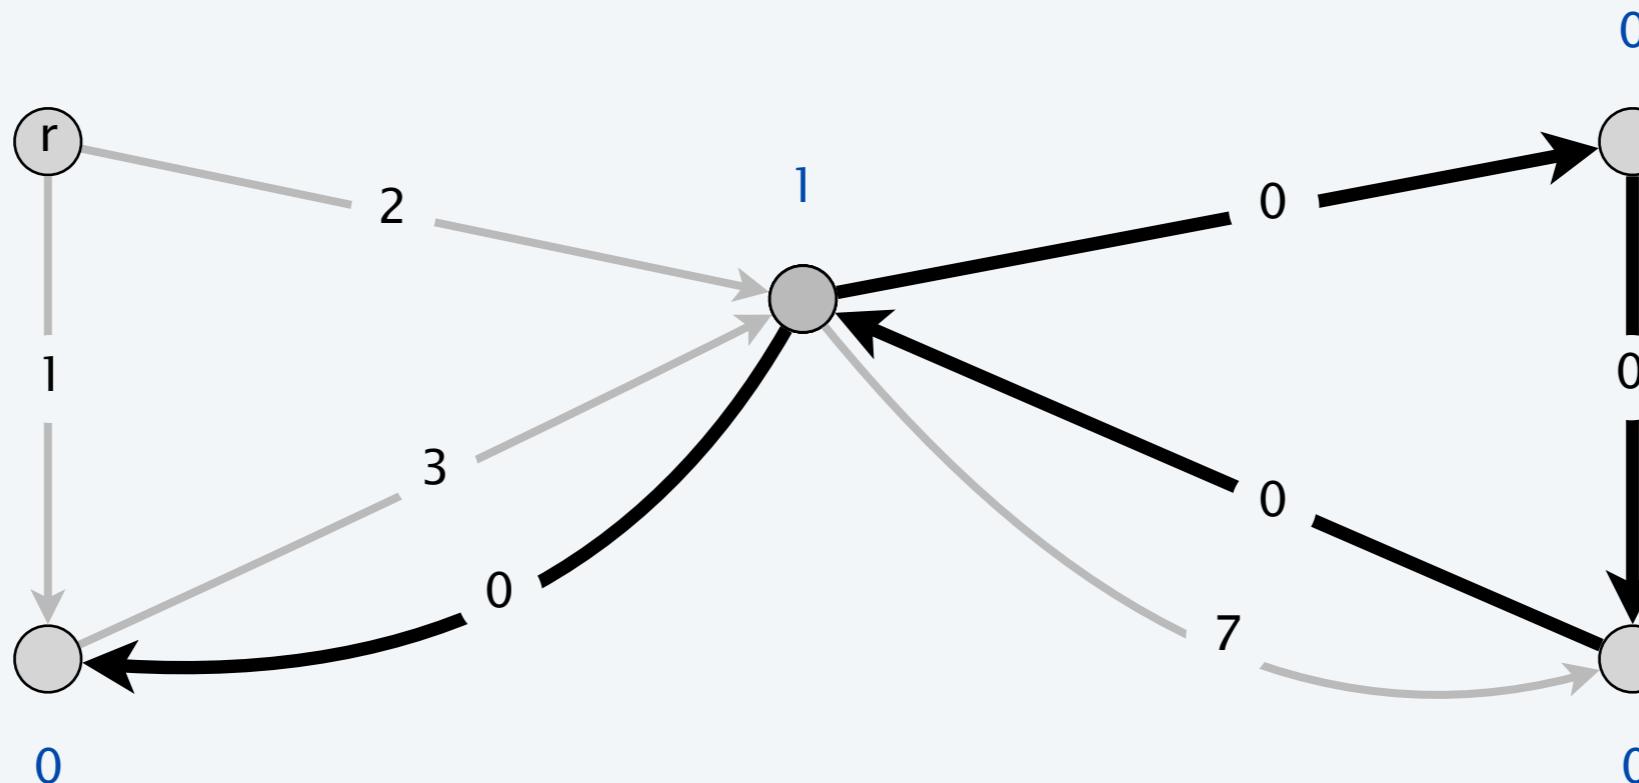

Edmonds branching algorithm demo

Phase 2: find cheapest edge entering each node

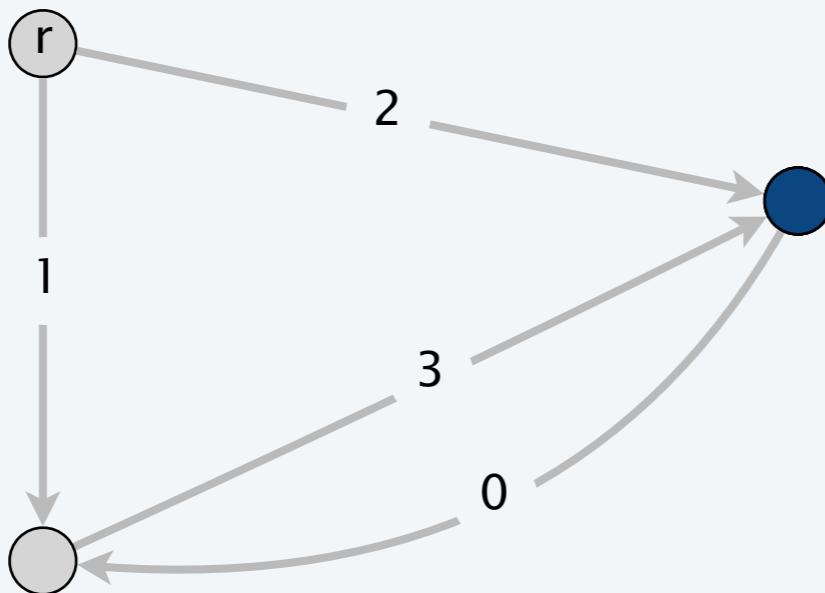

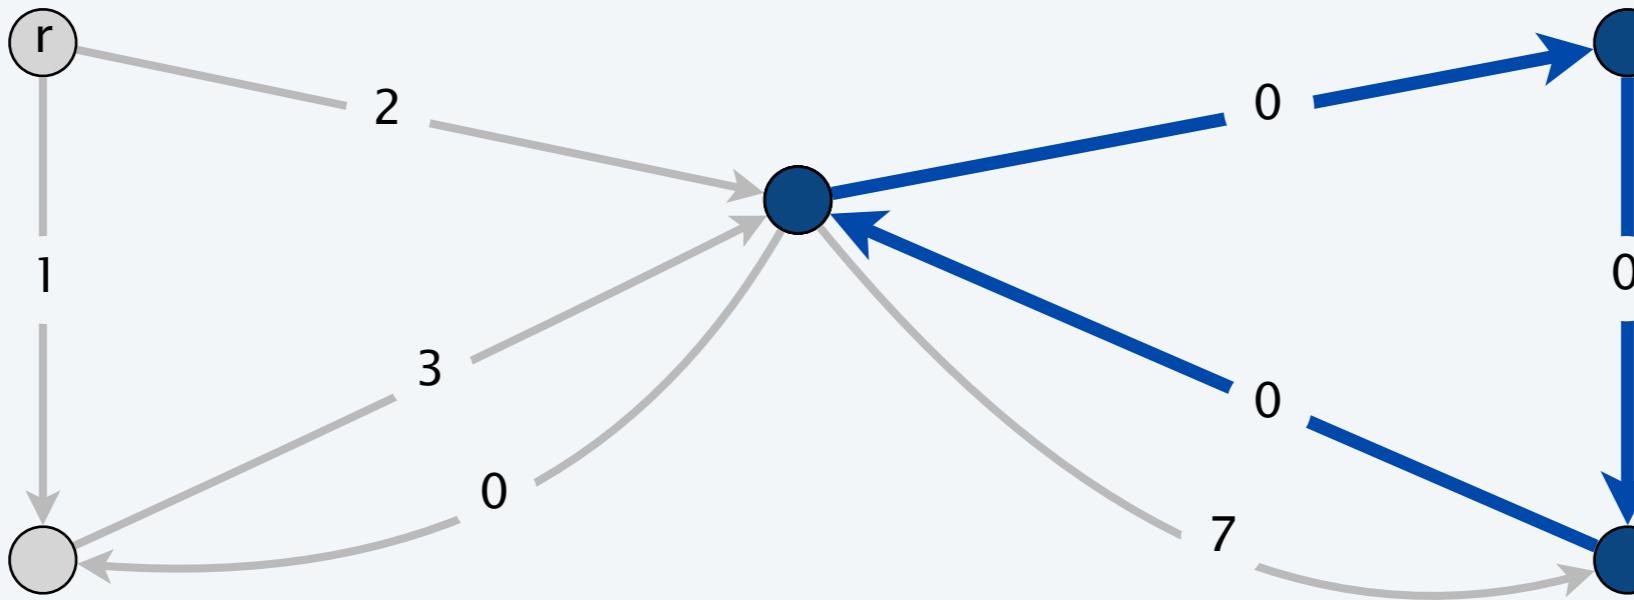

Edmonds branching algorithm demo

Phase 2: replace cost with reduced costs

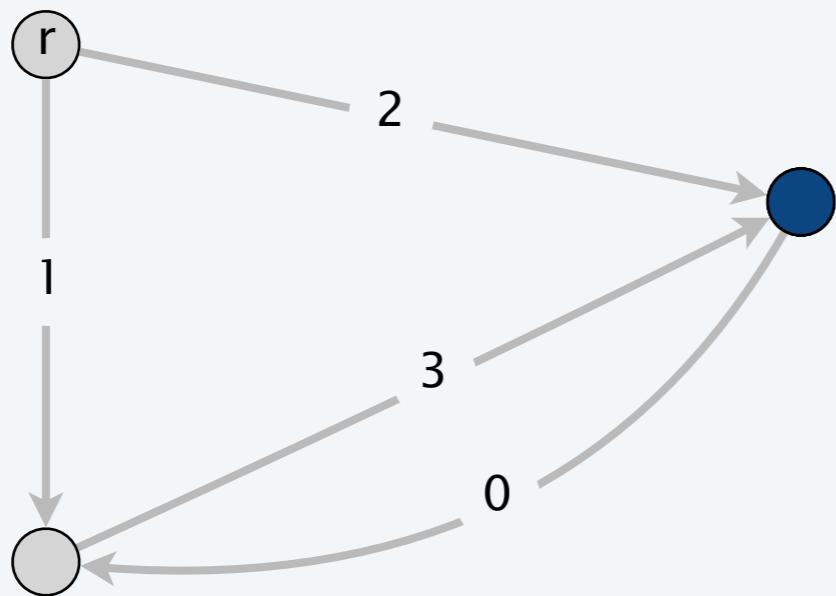

Edmonds branching algorithm demo

Phase 2: find 0-cost directed cycle and contract

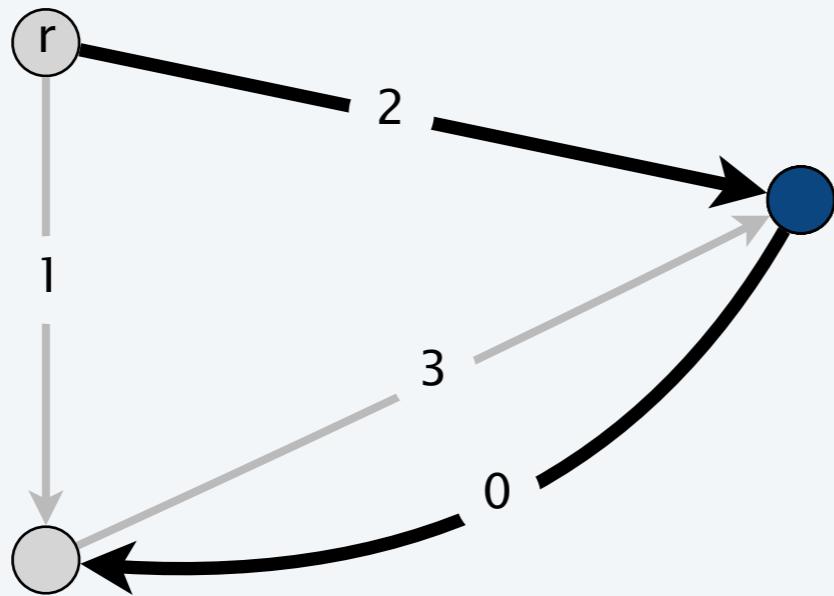

Edmonds branching algorithm demo

Phase 3: digraph G''

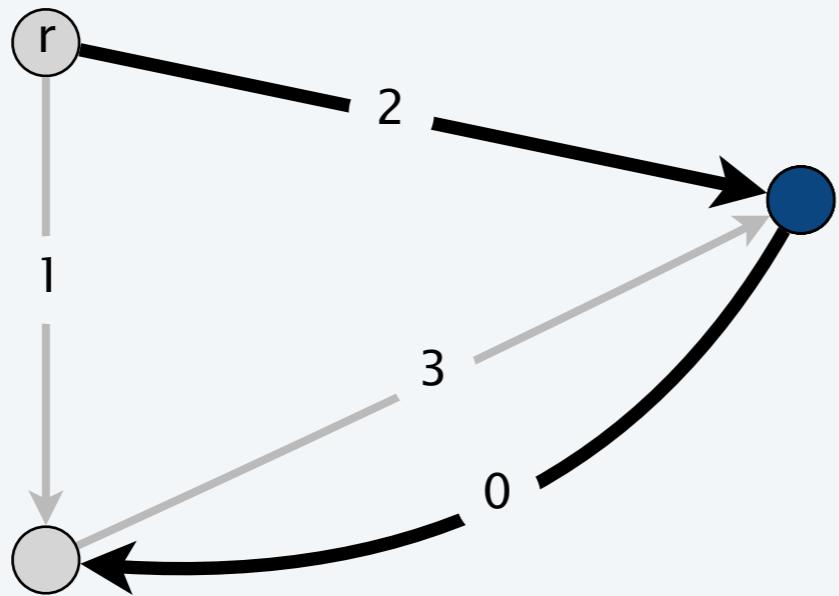

Edmonds branching algorithm demo

Phase 3: find cheapest edge entering each node

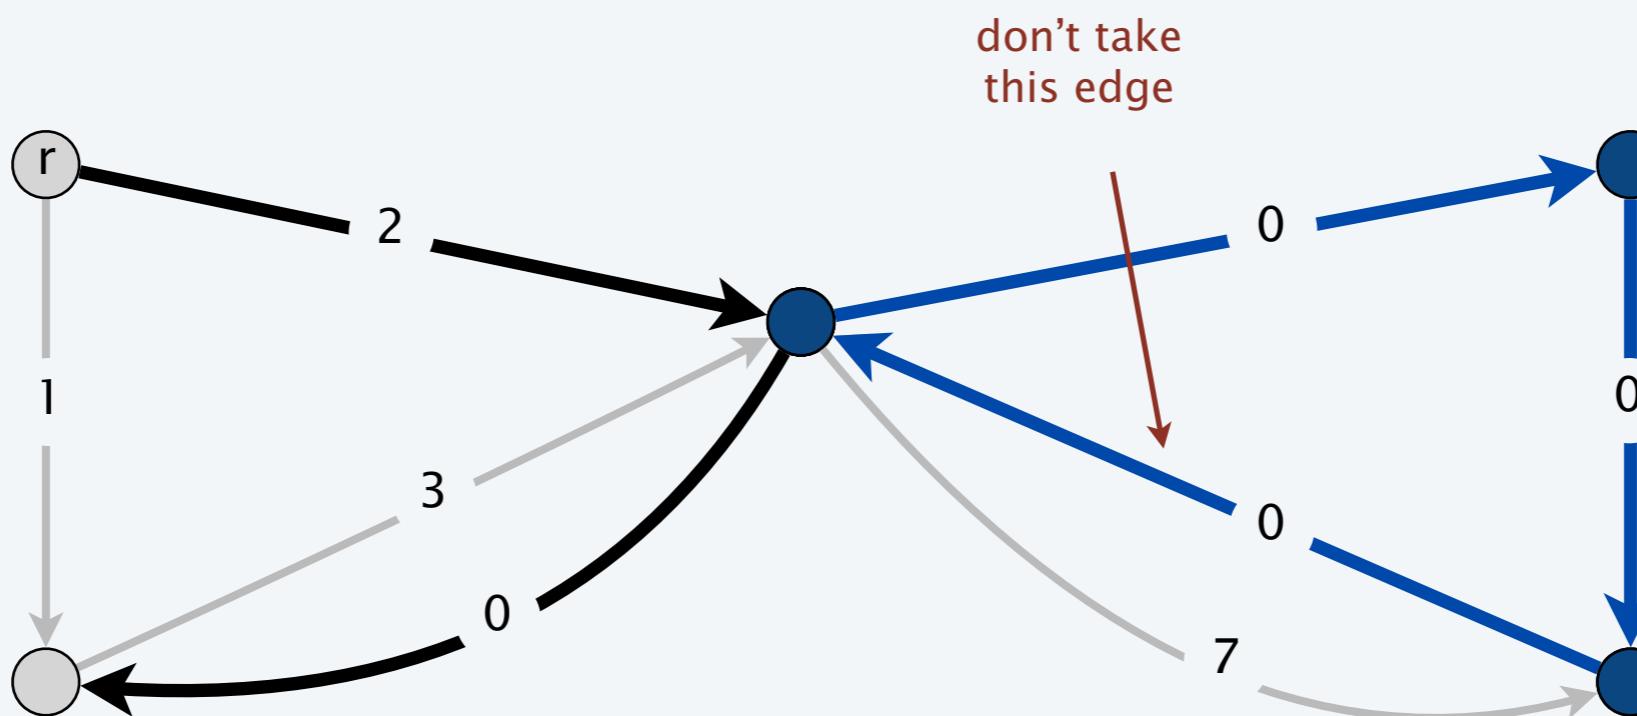

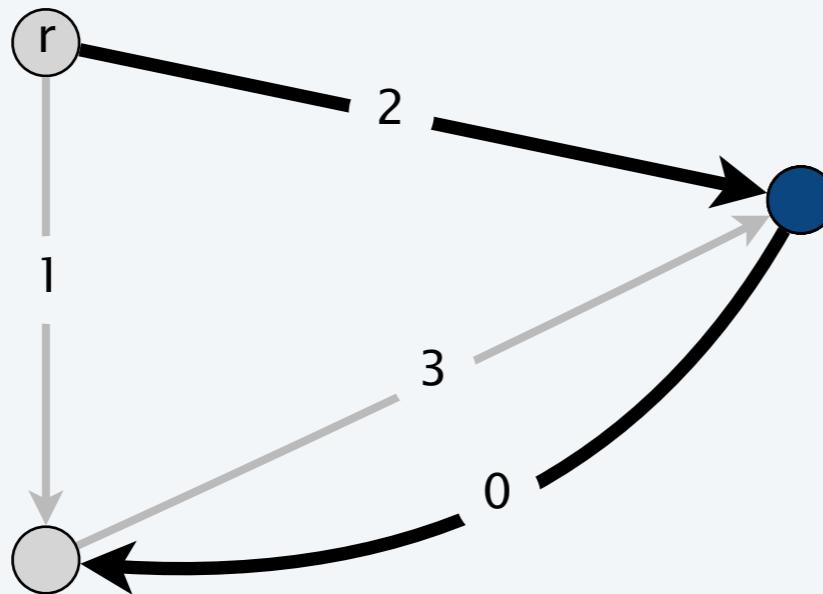

Edmonds branching algorithm demo

Phase 3: it's an arborescence!

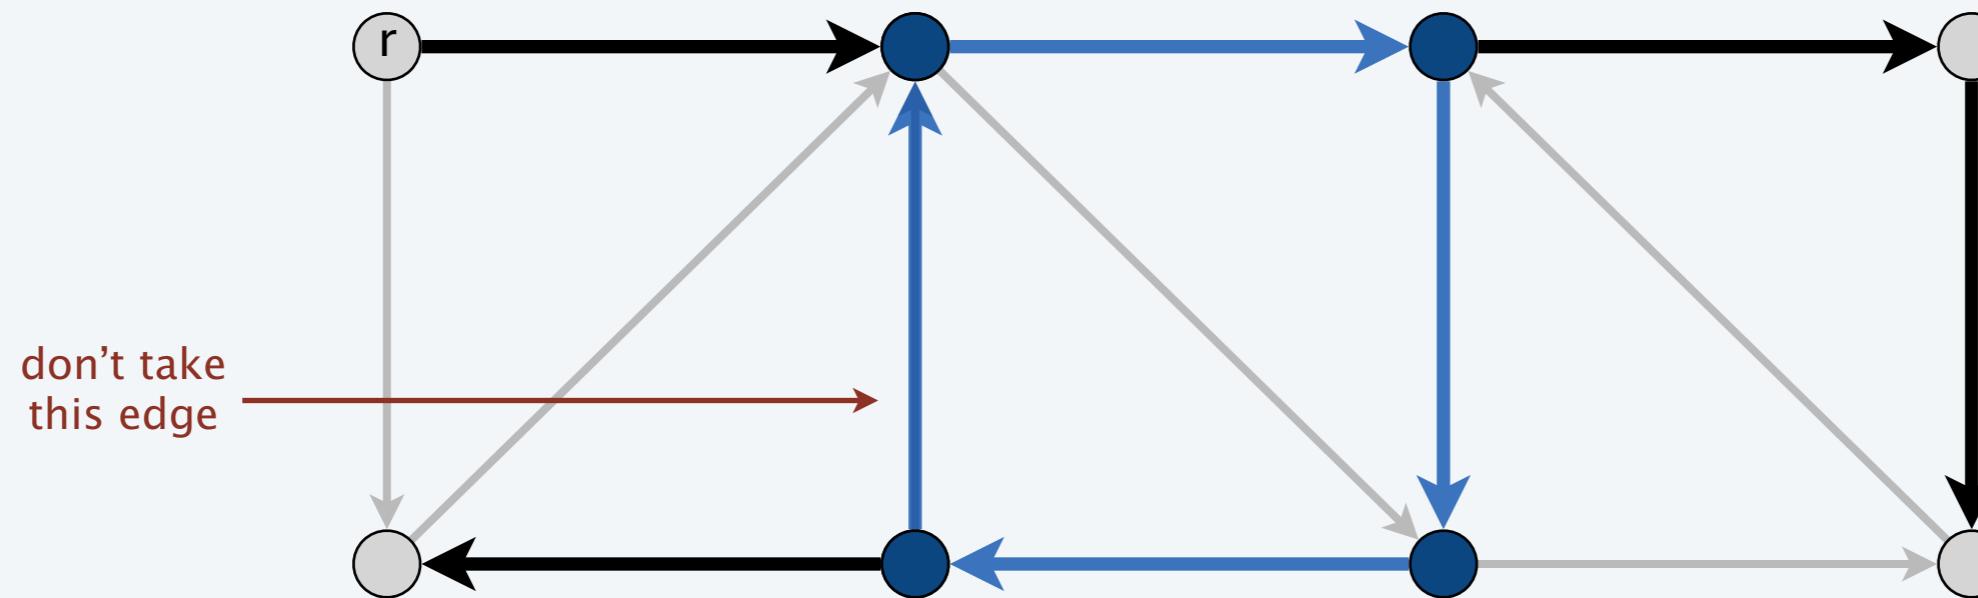

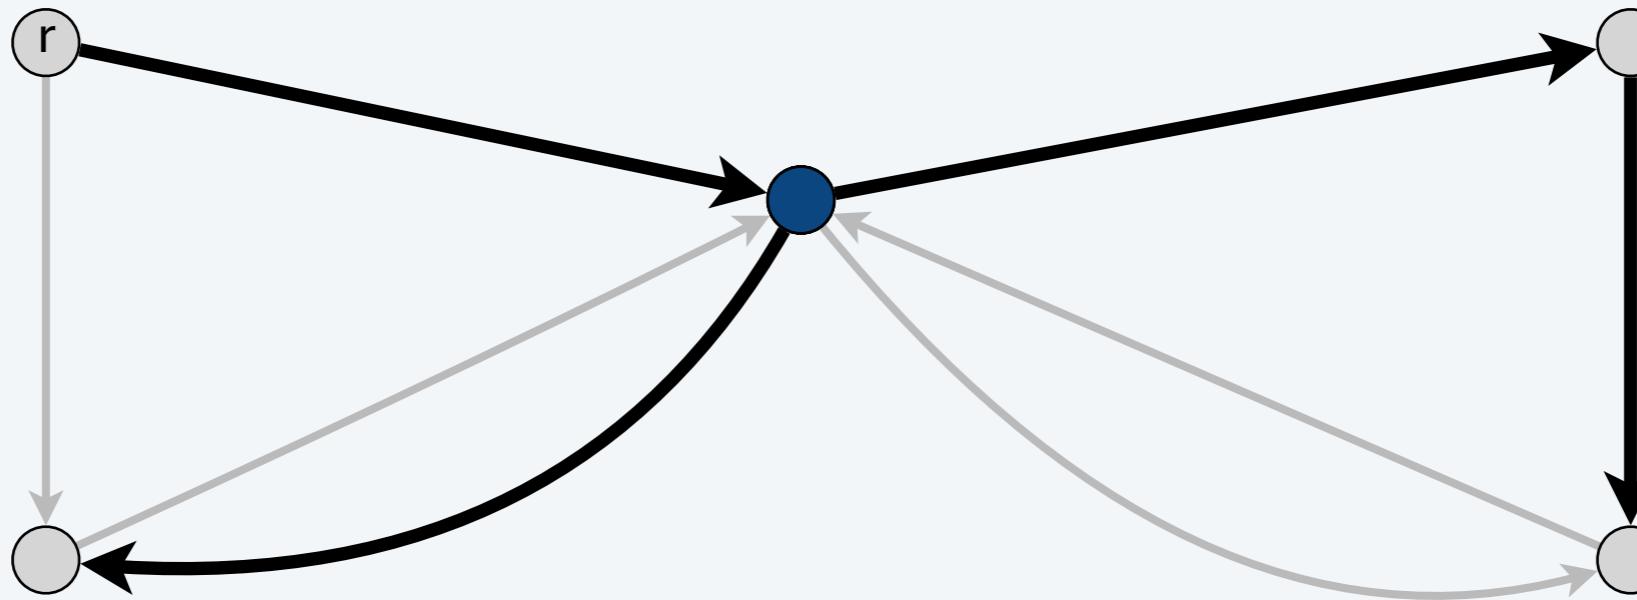

Edmonds branching algorithm demo

Phase 2': uncontract node and take all but one edge of cycle

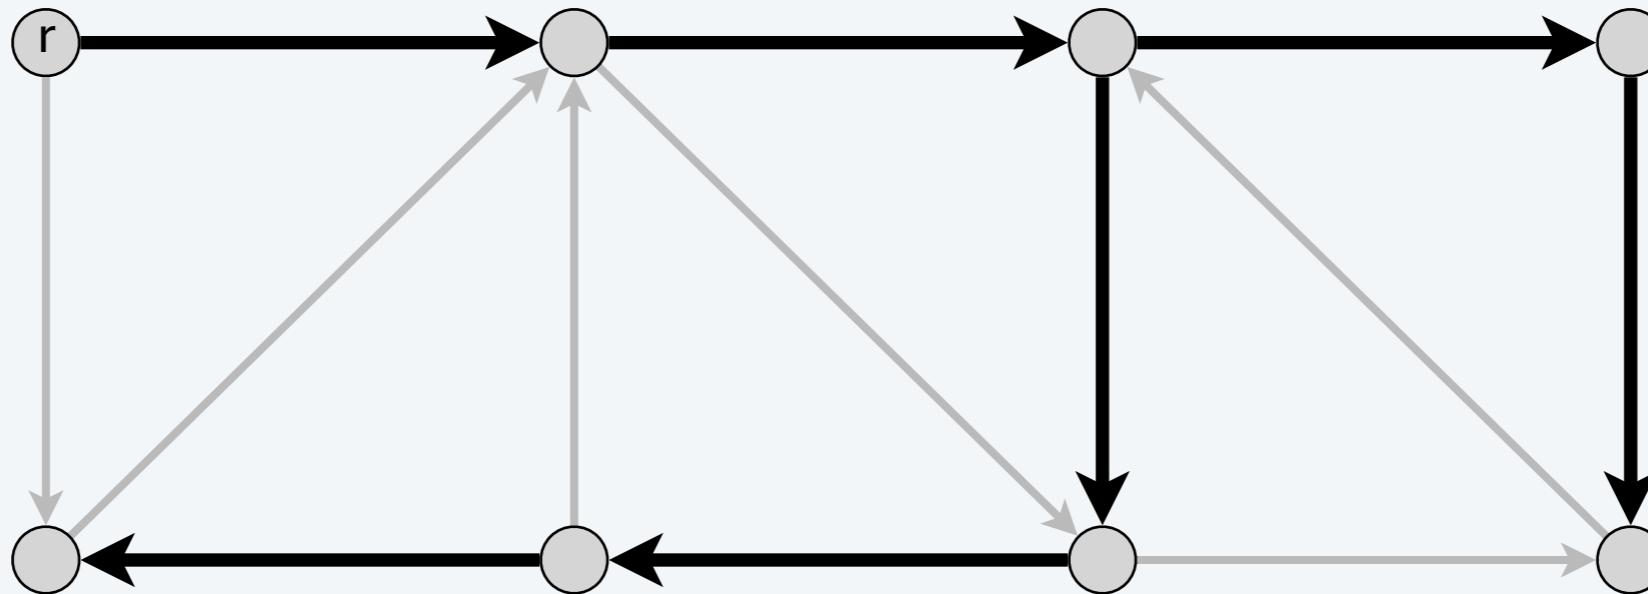

Edmonds branching algorithm demo

Phase 1': uncontract node and take all but one edge of cycle

Edmonds branching algorithm demo

Stop: no more nodes to uncontract

Edmonds branching algorithm demo

min-cost arborescence
