Crease Stylization
"Rubber-stamping"   Synthesis from Example

Synthesis uses Markov model.
        Similar to "video textures" [Schödl 00]

Stylization as Offsets

- Artist over-sketches crease
- Stylization recorded as 2D offsets
- Applied to new base path

base path

new base path
Silhouette Stylization

Silhouettes are view-dependent.

- Problem #1: localized stylization?
- Solution: "rubber-stamp" globally

← prototype
Silhouette Tracking

Silhouettes are view-dependent.

- Problem #2: parameterization coherence
- Solution: screen-space tracking

WYSIWYG NPR

- Draw into 3D scene

- Retain style in new views

- Ensure coherent animation
Aesthetic flexibility

How to Describe Shape-Conveying Lines?

- Image-space features

- Object-space features
  - View-independent
  - View-dependent

[Flaxman 1805]

Image-Space Lines

+ Intuitive motivation; well-suited for GPU

– Difficult to stylize

Examples:

   – Isophotes (toon-shading boundaries)

   – Edges (e.g., [Canny 1986])

   – Ridges, valleys of illumination
   [Pearson 1985, Rieger 1997,
     DeCarlo 2003, Lee 2007, …]
Image Edges and Extremal Lines

Edges:

Local maxima of
gradient magnitude,
in gradient direction
Ridges/valleys:

Local minima/maxima of
intensity, in direction of
max Hessian eigenvector

View-Independent Object-Space Lines

+ Intrinsic properties of shape;
  can be precomputed

– Under changing view, can be
  misinterpreted as surface markings

View-Independent Object-Space Lines

Topo lines: constant altitude

View-Independent Object-Space Lines

Creases: infinitely sharp folds
View-Independent Object-Space Lines

Ridges and valleys (crest lines)

- Local maxima of curvature
- Sometimes effective, sometimes not

[Thirion 92, Interrante 95, Stylianou 00, Pauly 03, Ohtake 04 …]

View-Dependent Object-Space Lines

+ Seem to be perceived as conveying shape

− Must be recomputed per frame
What Lines to Draw?

Silhouettes:

– Boundaries between object and background

What Lines to Draw?

Occluding contours:

- – Depth discontinuities
- – Surface normal perpendicular to view direction

[Saito & Takahashi 90, Winkenbach & Salesin 94, Markosian et al 97, …]

Occluding Contours

For any shape: locations of depth discontinuities

- – View dependent
- – Also called "interior and exterior silhouettes"

*no contour from this viewpoint*

contour from this viewpoint
Occluding Contours

For smooth shapes: points at which $n \cdot v = 0$

Occluding Contours on Meshes

Applying either definition on polygonal meshes
can result in messy lines

Frontfacing

Backfacing

— Contour

Occluding Contours on Meshes [Hertzmann 00]

Alternative: interpolate normals within faces

- Start with per-vertex normals

- Interpolate per-face (same as Phong shading)

- Compute $n \cdot v$ at each point, find zero crossings

- Potential snag: visibility

$$n \cdot v > 0$$

$$n \cdot v = 0$$

$$n \cdot v < 0 \qquad n \cdot v < 0$$
Occluding Contours on Meshes

Contours along edges

Contours within faces

Frontfacing

Backfacing

There are other lines…

Hypothesis: some are "almost contours"

Suggestive Contours

"Almost contours":

– Points that become contours in nearby views

contours

contours +
suggestive contours

Suggestive Contours: Definition 1

Contours in nearby viewpoints

(not corresponding to contours in closer views)

contour

nearby
viewpoint

*suggestive contour*

Suggestive Contours: Definition 2

$n \cdot v$ not quite zero, but a local minimum

(in the projected view direction w)

suggestive contours

Abstraction in NPR

User guided approaches

– the user explicitly marks the important content

[Durand et al. 2001]

[Hertzmann 2001]

Abstraction in NPR
Indication in pen and ink illustration

– the user specified what content was important

[Winkenbach and Salesin 1994]

Abstraction in NPR

Provide control over point of emphasis
  – control clutter in the rendered image

[Cole et al. 2006]

Abstraction in NPR

Rendering specific content: trees
  – programatically leave out lines in center of tree

[Kowalski et al.1999]

[Deussen 2000]

Abstraction in NPR

Select elements based on density and clutter

– drop strokes in areas of high density

[Winson and Ma 2004]

[Grabli et al. 2004]

Abstraction in NPR

User guided approaches
- infer important content from a user's eye movements
- evaluate using eye tracking [Santella and DeCarlo 2004]

[DeCarlo and Santella 2002]

Results…

Summary

NPR provides control over
style, abstraction

Common ingredients:
toon shading,
outline strokes,
hatching, paint,
paper effect

model

photorealism

non-photorealism
