

# Server-Side Web Programming: Java

Copyright © 2022 by  
Robert M. Dondero, Ph.D  
Princeton University

## Objectives

- . We will cover:
  - Aside: Python lambda expressions
  - Some advanced Java features
  - Server-side web programming in Java, via...
  - Servlets
  - The Spark web app framework
  - The Velocity template engine

## Motivation

- **Question:** Why study Java server-side web programming?
- **Answer 1:** Help you better understand server-side web programming
- **Answer 2:** Give you a sense of how Java is used in the “real world”

3

### Motivation

**Question:** Why study Java server-side web programming?

**Answer 1:** Doing so will help you better understand server-side web programming  
Help you get a sense of what is common across server-side web programming environments and what is language-specific

**Answer 2:** Doing so will give you a sense of how Java is used in the “real world”  
COS 126 uses Java to cover the fundamentals of programming  
COS 226 uses Java to cover algorithms & data structures  
To some extent, “real world” Java programming differs from the kind of academic programming that you did in 126 and 226.

## Motivation

- **Question:** Why study Java server-side web programming (cont.)?
- **Answer 3:** Show realistic use of some advanced features of Java
- **Answer 4:** Popular and important...

4

### Motivation

**Question:** Why study Java server-side web programming (cont.)?

**Answer 3:** Doing so will introduce some advanced features of Java that might be new to you

**Answer 4:** Java server-side Web programming is popular and important...

# Motivation

| Website       | Front End  | Back End  |
|---------------|------------|---|
| Google.com    | JavaScript | C, C++, Go, <b>Java</b> , <b>Python</b>                               |
| Facebook.com  | JavaScript | Hack, PHP, <b>Python</b> , C++, <b>Java</b> , Erlang, D, Xhp, Haskell |

[https://en.wikipedia.org/wiki/  
Programming\\_languages\\_used\\_in\\_most\\_popular\\_websites](https://en.wikipedia.org/wiki/Programming_languages_used_in_most_popular_websites)

# Motivation

## Programming Language vs High Traffic Websites

-- <http://blog.stoneriverelearning.com/top-5-programming-languages-used-in-web-development/>

## Motivation

If you consider all websites that experience high traffic...

Java is used in 83.3% of them

(Python and others) are used in 37.6% of them

## Agenda

- **Aside: Python lambda expressions**
- Some advanced Java features
- Servlet programming
- The Spark Web application framework
- The Velocity template engine

# Python Lambda Expressions

- ***Lambda expression***
  - From Alonzo Church
  - 1930s
  - A nameless function
  - Implemented in both Python and Java

8

## Lambda Expressions

### Lambda expression

A nameless function

From Alonzo Church

Alumnus of Princeton

Prof of philosophy and mathematics at Princeton for many years

Contemporary of Alan Turing

1930s

Developed some important theoretical results independent of and working with Turing

Lambda expressions are implemented in both Python and Java

## Python Lambda Expressions

- In Python:
  - The keyword `lambda`
  - (optionally) Parameters separated by commas
  - A colon
  - A single expression that uses the parameters

# Python Lambda Expressions

Without using  
a lambda  
expression:

```
def mult(x, y):  
    return x * y  
...  
prod = mult(5, 6)  
print(prod) # prints 30
```

Using a  
lambda  
expression:

```
mult = lambda x, y: x * y  
...  
prod = mult(5, 6)  
print(prod) # prints 30
```

Using a lambda expression:

```
print( (lambda x, y: x * y)(5, 6) ) # prints 30
```

# Python Lambda Expressions

Without lambda expression:

```
def compare_lengths(word1, word2):  
    return len(word1)-len(word2)  
...  
words.sort(compare_lengths)  
...
```

With lambda expression:

```
...  
words.sort(  
    lambda word1,word2: len(word1)-len(word2) )  
...
```

# Python Lambda Expressions

- Recall **eventtest2.py**
  - The job:
    - Handle events on `QPushButton` objects

# Python Lambda Expressions

- See **eventtestbad.py**
  - The (desired) job:
    - Same as eventtest2.py
  - Attempts to merge 3 slot functions into 1
  - Fails miserably

13

## Lambda Expressions

[see slide]

Code notes:

The argument passed to connect() should be a function (pointer)

Here, the argument passed to connect() is None

# Python Lambda Expressions

- See **eventtestlambda.py**
  - The job:
    - Same as eventtest2.py
  - Uses lambda expressions
  - Works!

14

## Lambda Expressions

[see slide]

Code notes:

An (arguably) nicer approach  
Use lambda expressions

## Agenda

- Aside: Python lambda expressions
- **Some advanced Java features**
- Servlet programming
- The Spark Web application framework
- The Velocity template engine

## Advanced Java: Lambda Exprs

- Java lambda expressions
  - New to Java SE 8
  - Examples...

## Advanced Java: Lambda Exprs

Without lambda expression:

```
class LengthComparator implements Comparator<String>
{
    public int compare(String word1, String word2)
    {
        return word1.length() - word2.length();
    }
}
...
String[] words;
...
Arrays.sort(words, new LengthComparator());
...
```

## Advanced Java: Lambda Exprs

With lambda expression:

```
...  
String[] words;  
...  
Arrays.sort(words,  
    (String word1, String word2) ->  
        word1.length() - word2.length() );  
...
```

Sometimes can omit param types:

```
...  
String[] words;  
...  
Arrays.sort(words,  
    (word1, word2) -> word1.length() - word2.length()  
);  
...
```

18

### Advanced Java: Lambda Exprs

[see slide]

Can omit the parameter types if the compiler can infer them.

## Advanced Java: Lambda Exprs

- Generalizing...
- ***Functional interface***
  - An interface that declares a single method
- Can use a lambda expression in lieu of an object of a class that implements a functional interface

## Advanced Java: Lambda Exprs

- Java lambda expression observations
  - Function pointers in a language that doesn't have functions!
  - Handy!
  - Inelegant?

20

### Some Advanced Java Features

#### Lambda expression observations

"It's best to think of a lambda expression as a function, not an object, and to accept that it can be passed to a functional interface." -- Horstmann

Function pointers in a language that doesn't have functions!  
Handy!  
Inelegant?

## Advanced Java: Packages

- **Problem:** Different vendors may use conflicting class names

```
class Book {...} // From vendor A  
class Book {...} // From vendor B
```

## Advanced Java: Packages

### . **Solution: *Packages***

- Package: a named group of classes/interfaces
- Prevents name conflicts
  - Names must be unique **within** a package, but not **across** packages
- A package may contain packages
- By default, classes/interfaces are in “anonymous” package

22

### Packages

#### **Solution: *Packages***

**Package:** a named group of classes/interfaces

Prevents name conflicts

A package may contain packages

By default, classes/interfaces are in “anonymous” package

## Advanced Java: Packages

- **Using** a package

```
...  
java.lang.Math.sqrt(x) ;  
...
```

```
import java.lang.Math;  
...  
Math.sqrt(x) ;  
...
```

# Advanced Java: Packages

- **Creating** a package

```
// Book.java  
  
package edu.princeton.penny;  
  
// All names defined subsequently are  
// in the edu.princeton.penny package.  
  
class Book{ ... }
```

- Defines class edu.princeton.penny.Book
- Book.java must be in edu/princeton/penny directory

# Advanced Java: Maven

- **Maven**

- Java **build** tool
  - C : make
  - Java : Maven
- Java **package management** tool
  - Python: pip & PyPi
  - Java: Maven & Maven central repo

## Advanced Java: Maven

- Maven as a package manager
  - Manages the central Maven repository, and...
  - Your local Maven repo (~/.m2), such that...
  - Your local Maven repo is a subset of the central Maven repo, and...
  - Your local Maven repo contains all .jar files required by your app

## Advanced Java: Maven

- Maven as a package manager
  - Programmer defines **pom.xml** file for app
    - Specifies .jar files on which app depends
  - Maven downloads .jar files, as necessary, from central Maven repo to your local Maven repo
  - Does so recursively!
- Related/competing tools:
  - **Ant, Gradle**

## Agenda

- Aside: Python lambda expressions
- Some advanced Java features
- **Servlet Programming**
- The Spark Web Application Framework
- The Velocity Template Engine

## Servlet Programming

- **Question:** How does one do web programming in Java?
- **Answer 1:** Use CGI
- **Answer 2:** Use Servlets
- **Answer 3:** Use a Java web app framework

## Servlet Programming

- **Answer 1: Use CGI**
  - Possible, but...
  - Very inefficient
  - Java standard library provides no CGI classes

30

### Servlet Programming

#### **Answer 1: Use CGI**

Possible, but...

Very inefficient

Each HTTP request forks a new child process and execs a new JVM!

Java standard library provides no CGI classes

No “real” website would use them anyway

(I composed some for my own use; see me if you want)

## Servlet Programming

- **Question:** How does one do web programming in Java?
- **Answer 1:** Use CGI
- **Answer 2:** Use Servlets
- **Answer 3:** Use a Java web app framework

# Servlet Programming

- **Servlets**

- “A servlet is a Java technology-based Web component, managed by a **container**, that generates dynamic content.”
  - Servlet specification at:
  - [http://download.oracle.com/.../servlet-3\\_0-final-spec.pdf](http://download.oracle.com/.../servlet-3_0-final-spec.pdf)

# Servlet Programming

Popular servlet containers:

*Apache Tomcat*

*Eclipse Jetty*

# Servlet Programming

Tomcat or Jetty can be both servlet container and HTTP server

**We'll use that configuration**  
**We'll use Jetty**

## Servlet Programming

- **Python:** *WSGI specification* connects HTTP server and your Python app
  - **Programmers compose** Python code to conform to WSGI spec
  - **Sys admins deploy** Python code with HTTP server

## Servlet Programming

- **Java:** *Servlet specification* connects HTTP server and your Java app
  - **Programmers compose** Java code to conform to Servlet spec
  - **Sys admins deploy** Java code with Servlet container and HTTP server

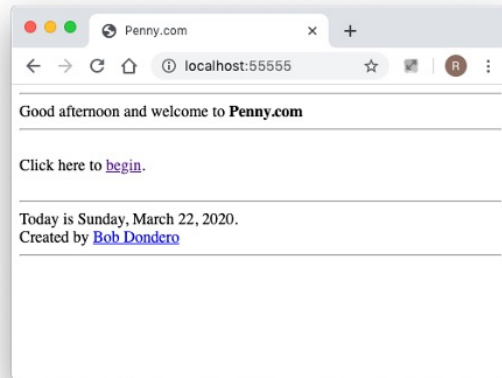

# Servlet Programming

- See **PennyServlets** app

```
$ mvn clean  
$ mvn compile  
$ ./runserver 55555
```

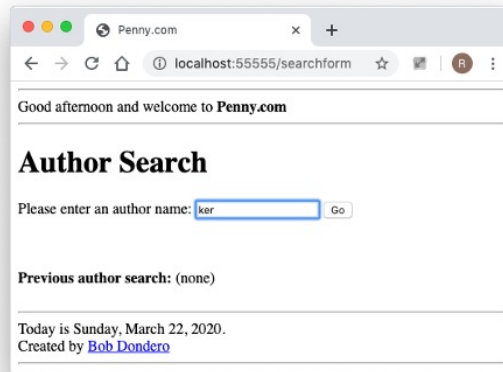

# Servlet Programming

- See **PennyServlets** app (cont.)

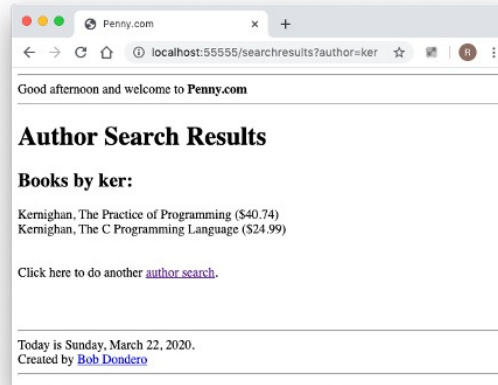

# Servlet Programming

- See **PennyServlets** app (cont.)

# Servlet Programming

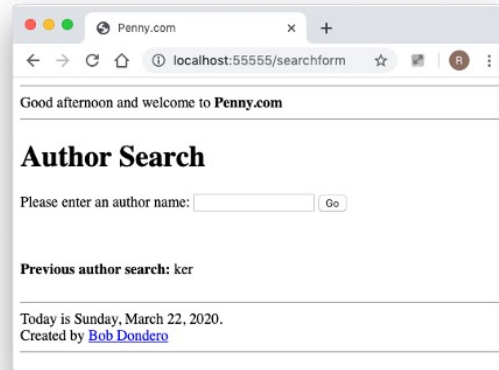

- See **PennyServlets** app (cont.)

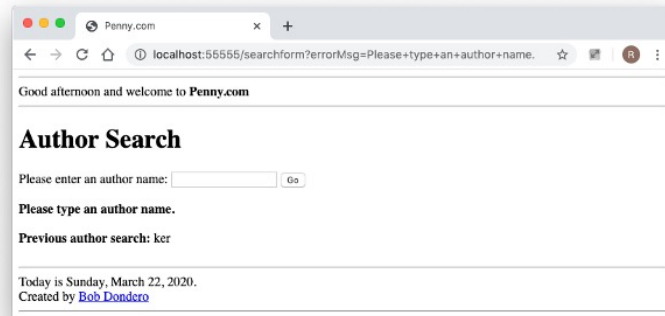

# Servlet Programming

- See **PennyServlets** app (cont.)

# Servlet Programming

- See **PennyServlets** app (cont.)

# Servlet Programming

- See **PennyServlets** app (cont.)
  - penny.sql, penny.sqlite
  - **Book.java, Database.java**
  - **Common.java, Util.java**
  - **IndexServlet.java**
  - **SearchFormServlet.java**
  - **SearchResultsServlet.java**
  - **Penny.java**
  - **pom.xml**
  - **runserver**

43

## Servlet Programming

[see slide]

Code notes: **Book.java**

In edu.princeton.penny package

Code notes: **Database.java**

In edu.princeton.penny package

Uses Java database driver to access SQLite database

Code notes: **Common.java**

In edu.princeton.penny package

Defines static methods used by multiple classes

Code notes: **Util.java**

In edu.princeton.penny package

getCookie() method accepts cookie name, returns cookie value (or null)

Code notes: **IndexServlet.java**

In edu.princeton.penny package

Called to generate the index page

Code notes: **SearchFormServlet.java**

In edu.princeton.penny package

Called to generate the search form page

Gets value associated with given name

Gets cookie with given name

Code notes: **SearchResultsServlet.java**

In edu.princeton.penny package

Called to generate the search results page

Performs redirection

Creates a cookie

Accesses database

Code notes: **Penny.java**

Define main() method

Maps HTTP requests to Servlet classes

Code notes: **pom.xml**

Configures Maven

Use JDK 1.8

The app depends upon the 5 specified .jar files

Code notes: **runserver**

Bash shell script

Uses Maven to run Jetty Web server...

Which serves the app

# Servlet Programming

```
PennyServlets
pom.xml
runserver
src
  main
    java
      edu
        princeton
          penny
            Book.java
            Common.java
            Database.java
            IndexServlet.java
            Penny.java
            SearchFormServlet.java
            SearchResultsServlet.java
            Util.java
  resources
    penny.sql
    penny.sqlite
```

## Agenda

- Aside: Python lambda expressions
- Some advanced Java features
- Servlet programming
- **The Spark Web application framework**
- The Velocity template engine

## Spark

- **Question:** How does one do web programming in Java?
- **Answer 1:** Use CGI
- **Answer 2:** Use Servlets
- **Answer 3:** Use a Java web app framework

# Spark

- **Who:** Per Wendel
- **When:** 2011, rewritten for Java 8 in 2014
- **Descrip:** “A micro framework for creating web applications in Kotlin and Java 8 with minimal effort”
  - Spark website

# Spark

- Why study Spark?
  - (Instead of some other framework)
  - Easy to learn
    - Simple
    - Good documentation and tutorial
    - Integrated with Jetty container/server

# Spark

- . See **PennySpark** app

```
$ mvn clean  
$ mvn compile  
$ ./runserver 5555
```

All pages identical to those of PennyServlets app

# Spark

- See **PennySpark** App (cont.)
  - penny.sql, penny.sqlite
  - Book.java, Database.java
  - Common.java
  - **Penny.java**
  - **pom.xml**
  - runserver

50

## Servlet Programming

[see slide]

Code notes: Penny.java

In edu.princeton.penny package

Used to generate all pages

Uses lambda expressions

Code notes: pom.xml

Only 2 dependencies!

sqlite-jdbc

spark-core

Maven recursively fetches all child dependencies automatically

# Spark

```
PennySpark
pom.xml
runserver
src
  main
    java
      edu
        princeton
          penny
            Book.java
            Common.java
            Database.java
            Penny.java
  resources
    penny.sql
    penny.sqlite
```

# Spark

- Spark provides utility methods
  - Methods to fetch `name=value` pairs
  - Methods to fetch/create cookies
  - Methods to implement HTTP redirect

## Agenda

- Aside: Python lambda expressions
- Some advanced Java features
- Servlet programming
- The Spark Web application framework
- **The Velocity template engine**

# Velocity

- . Problem:
  - Code contains many assignment statements to compose HTML code
  - Bulky; awkward; slow; error prone
- . Solution:
  - **Templates**
  - In this case via...
  - The **Apache Velocity** template engine

# Velocity

- See **PennySparkVelocity** app
  - penny.sql, penny.sqlite
  - Book.java, Database.java
  - **header.vtl, footer.vtl, index.vtl, index.vtl, searchform.vtl, searchresults.vtl**
  - **Penny.java**
  - **pom.xml**
  - runserver

55

## The Velocity Template Engine

[see slide]

Code notes: footer.vtl

A Velocity template containing a placeholder

Code notes: index.vtl

A Velocity template containing a placeholder

Code notes: searchform.vtl

A Velocity template containing a placeholder

Code notes: searchresults.vtl

A Velocity template containing a placeholder

Also contains some logic expressed in the Velocity template language (not Java)

Code notes: Penny.java

Instantiates Velocity templates

# Velocity

```
PennySparkVelocity
pom.xml
runserver
src
  main
    java
      edu
        princeton
          penny
            Book.java
            Common.java
            Database.java
            Penny.java
    resources
      penny.sql
      penny.sqlite
      header.vtl
      footer.vtl
      index.vtl
      searchform.vtl
      searchresults.vtl
```

# Velocity

- Note the MVC architecture
  - **Model**
    - penny.sql, penny.sqlite, Book.java, Database.java
  - **View**
    - header.vtl, footer.vtl, index.vtl, searchform.vtl, searchresults.vtl
  - **Controller**
    - Penny.java

57

## The Velocity Template Engine

Note the MVC architecture

### **Model**

penny.sql, penny.sqlite, Book.java, Database.java  
Concern of DB admins

### **View**

header.vtl, footer.vtl, index.vtl, searchform.vtl, searchresults.vtl  
Concern of Web designers

### **Controller:**

Penny.java  
Concern of programmers

# Velocity

- Python/Flask/Jinja2
  - Encourages separation of concerns
  - But templates can contain Python-like code
- Java/Spark/Velocity
  - **More strongly** encourages separation of concerns
  - Templates **cannot** contain embedded Java code!

58

## The Velocity Template Engine

Python/Flask/Jinja2

Encourages separation of concerns  
But templates can contain Python-like code

Java/Spark/Velocity

More strongly encourages separation of concerns  
Templates **cannot** contain embedded Java code!  
Instead use a special purpose (Apache Velocity) language

## More Spark and Velocity!

- There is much more to Spark and Velocity
- Spark website:
  - <http://sparkjava.com/>
- Velocity website:
  - <http://velocity.apache.org/engine/1.7/vtl-reference.html>
- *Don't confuse **Spark** (sometimes called **SparkJava**) with **Apache Spark** (an open-source cluster-computing framework)*

## Commentary

- **Commentary:** Python vs. Java for server-side web apps...
- **Python/Flask/Jinja2**
  - Small/medium apps: good
  - Large apps: not so good
- **Java/Spark/Velocity**
  - Small/medium apps: not so good
  - Large apps: good

60

### Commentary

**Commentary:** Python vs. Java for server-side web apps...

#### Python/Flask/Jinja2

Small/medium apps (4 programmers, a few months): good  
Simple, succinct  
Large apps (40 programmers, a few years): not so good  
Dangerous (weak/duck typing, no privacy)  
Relatively poor performance

#### Java/Spark/Velocity

Small/medium apps: not so good  
Complex, verbose  
Large apps: good  
Safe (strong typing, privacy)  
Good performance

## Summary

- We have covered:
  - Aside: Python lambda expressions
  - Some advanced Java features
  - Server-side web programming in Java, via...
  - Servlets
  - The Spark web app framework
  - The Velocity template engine
