

Final Project Report

Combine the abstract and methodology sections to make a full report on the project. It should contain 4 sections:

- Introduction: What is the project about? Why is the project interesting? Draw from the abstract you wrote previously.
- Framework: The background section of the report. Explain the main known concepts and techniques that are related to the project. Draw from the methodology essay you wrote previously.
- Findings: Describe the project idea in detail. You can draw from the part of the methodology essay you previously wrote on Genetic Algorithms with LLMs, but add more detail.
- Conclusion: What is your assessment of your findings? What applications are there? How would you further extend the project?

Make sure to include references taken from the different works mentioned throughout the class.
